gards it as more probable that she is intended as a
symbol of the soul in the enjoyment of eternal hapi-
sity. This is the case for the water (John, iv, 14) "springing
up into life everlasting", being a pledge of immortality.
In the catacomb of St. Callis-
tus there is a fourth painting of the miracle of
the multiplication which conforms more closely to histori-
cal narrative than the representations of an earlier
date; Christ is here depicted with both hands held
over the loaves and fishes presented to Him by two
women, together with the words: "Ora et cum
Him."
It is noted that more than thirty frescoes of the
miraculous multiplication still exist in the Roman catacombs.
For an exact and reliable
reproduction of them see Wilpert, "Le Piture delle
catacombe Romane", Rome, 1903.

III.—THE WEDDING AT CANA.—The custom intro-
duced in the third century of representing the multi-
plication of the loaves to the exclusion of the fishes is
thought to have been indirectly instrumental in
bringing about a new and beautiful symbol of the
Eucharist in early Christian painting. Previous to
this time only two frescoes contained any allusions to
the Eucharistic wine; the chalice of the "Fractio
Panis" and the red substance in the baskets of the
grapes. Frescoes of the multiplication of the two symbols of the
consecration by the omission of the fishes (leaving
only bread, one of the two species required for the
Eucharist) probably suggested the idea of a special
symbol for the Eucharistic wine. No more approp-
riate symbol for this purpose was to be desired than the
miracle of Cana (John, ii, 1–11), which was actually
adopted. As Christ at the marriage feast changed
water into wine, so on this occasion the chalice of the
wine into His blood. Quite apropos in this relation
is a statement of St. Cyril of Jerusalem to the effect
that, since the Lord "in Cana of Galilee changed
water into wine, which is akin to blood", why should it
be regarded as "incredible that He should have changed
wine into blood"? (Cat., XXII, 2.) Two frescoes
representing this miracle are found in the Roman
catacomb of Sts. Peter and Marcellinus. The more
ancient of these, which dates from the middle of
the third century, represents four men and three women
partaking of a repast. Before the couch on which
they are reclining is a table, while on the left a servant
is carrying a dish to the person occupying the post
of honour at the right extremity. The servant's hands
are covered by a cloth. On the right Christ is seen
touching with a rod one of six water pots that stand
in front of Him. Taken as a whole, there can scarcely
be any doubt that here we have a Eucharistic scene.
The number of guests is the invariable
number in Eucharistic representations. The servant
with veiled hands is the bearer of some sacred object
(where St. Peter receiving the Law from Christ has his
hands similarly veiled). Finally, as in all other
Eucharistic frescoes, the Sacraments of Baptism and
Holy Communion are brought into close relationship;
in the right of the scene described is the fountain
of Moses and on the left the representation of the
administration of baptism. In the centre of the vault also a
veiled orans is an allusion to the effects of Communion
(a pledge of eternal life).
The second fresco of this subject belongs to the mid-
dle of the fourth century. Here Christ is twice repre-
sented, once multiplying the loaves, and a second time
changing water into wine. A banquet scene, which
had suffered serious injury, occupies the lunette; five
of the seven participants can still be recognized as
men. The discovery in 1864 at Alexandria of an ear-
erly fresco of a miracle of Jesus at Cana, which
in some respects to the catacombs of Rome, brought to
light a fresco in which two Eucharistic symbols of the
first Christian age are reproduced in a new and striking
manner. The picture occupies the frieze of the apse
in a small cemeterial basilica and is, consequently,
above the place formerly occupied by the altar. The
stone bench for the clergy in the sanctuary is still in
place and the preparatory work of the artists has been
represented. The central subject is the miraculous
multiplication; Christ, identified by the nimbus, is seated
on a throne and is in the act of blessing loaves and
fishes presented by St. Peter and St. Andrew (identi-
fied by inscriptions). At his feet twelve baskets of
bread are distributed symmetrically. To the right
and left of this episode were two banquet scenes.
The former is almost wholly destroyed, but the Greek
inscription gives a clue to the subject. This reads:
"Those partaking of the eulogia of Christ", Eulogia
is the term used by St. Paul (I Cor., x, 16) in reference to the
Eucharist: "the chalice of eulogia [benedic-
tion] which we bless, is it not the communion of the
blood of Christ?" The application of this term, therefore,
to the food set before the banqueters here, points to the
inference that here was depicted a Eucharistic scene in which the guests partook of the
symbolic loaves and fishes. The scene on the right,
we learn from inscriptions ("Jesus", "Mary", "Serv-
ants"), represented the miracle of Cana. The author
of this fresco, who was well acquainted with the sym-
bolism of the banquet scene, was doubtless inspired by
the favourite symbol of the Eucharist, i. e. the
miraculous multiplication of the loaves and fishes,
and (2) the later symbol of the Eucharistic wine, in-
spired by the miracle at the wedding feast.

MAURICE M. HASSETT.

Eucharistic Congresses are gatherings of eccle-
siastics and laymen for the purpose of celebrating and
and seeking the means to spread its knowledge and love throughout
The Real Presence of Jesus Christ in the Eucharist is one of the principal dogmas of the Catholic Faith and is therefore of paramount importance as the most precious treasure that Christ has left to His Church as the centre of Catholic worship and as the source of Christian piety. The main advantages of these congresses have been in the concentration of the thoughts of the faithful upon the mystery of the altar, and in making known to them the means by which devotion towards the Holy Eucharist may be promoted and implanted in the hearts of the people.

The promoters of Eucharistic congresses believe that, if, on the one hand, the practice of adoration, Confraternities of the Blessed Sacrament, and the practice of frequent Communion have spread rapidly and extensively, it must be ascribed in great part to these gatherings.

The first congress owed its inspiration to Bishop Gaston de Ségur, and was held at Lille, France, 21 June, 1881. The idea at first was merely local and met with few adherents, but it grew from year to year with an ever-increasing importance. The second gathering was at Avignon, in 1882, and the third at Liége, in the following year. When from the 9th to the 13th of September, 1883, the fourth congress met at Fribourg in Switzerland, under the presidency of the famous Monsignor Ducrest, that same influence and example drew to the platform members of the Cantonal Government, officials of the municipality of Fribourg, officers of the army, judges of the courts, while thousands of Catholics from all over Europe joined in the formal procession. Toulouse, in the South of France, was the place of meeting of the fifth congress in the 20th to the 25th of June, 1886, and there 1500 ecclesiastics and 30,000 laymen were present at the closing exercises.

The sixth congress met in Paris, 2-6 July, 1888, and the great memorial church of the Sacred Heart on Montmartre was the Centre of the proceedings. Antwerp, in Belgium, entertained the next congress, 15-21 August, 1890; an immense altar of repose was erected in the Place de Meir, and it was estimated that 150,000 persons were gathered about it when Cardinal Goossens, Archbishop of Mechlin, gave the solemn Benediction. Bishop Doutreloux of Liége was then president of the Permanent Committee for the Organization of Eucharistic Congresses, the body which has charge of the details of these meetings.

Special importance was attached to the eighth congress, which went to Jerusalem to hold its sessions from the 14th to the 21st of May, 1893. Pope Leo XIII sent as legate Cardinal Langénieux, Archbishop of Reims. Here the reunion of the Orient was advocated, and an adoration of the Blessed Sacrament was preached on the very spot where tradition says the Agony in the Garden took place. Next year the congress was held at Reims, 25-29 July, and the different churches of the East were largely represented. A place was given in the deliberations for the first time to the study of social questions affecting the working classes. Paray-le-Monial, the City of the Sacred Heart, 20-21 September, 1897, was the scene of the tenth congress; and the eleventh, the best organized and most strikingly publicized of all, was held at Lourdes, 13-17 July, 1898. Cardinal Langénieux was again the pope's legate at the twelfth congress which had Lourdes, the city of Eucharistic miracles, as its meeting place, 7-11 August, 1899. This gathering was notable for the number of priests who took part in the procession. When the thirteenth congress met at Angers, 4-8 September, 1901, a special session was devoted to the question of parents having reference to such works as young men ought to undertake for the promotion of devotion to the Holy Eucharist and the solution of social questions.

I. V. first erected as the location for the fourteenth congress, and the fifteenth, 20-21 July, 1904, went to Angoulême, where the operations of French law forbade the usual procession of the Blessed Sacrament.

Pope Pius X having expressed a wish that the Eucharistic Congress should be held in Rome, the delegates met there, 1-6 June, 1905. He added to the solemnity of the occasion by celebrating Mass, at the opening of the sessions, by giving a special audience to the delegates, and by being present at the procession that closed the proceedings. It was the dawn of the movement that led to this decree, "Tridentina-Synodus", 20 December, 1903.

Tourmal, in Belgium, saw the seventeenth congress, 15-19 August, 1906; and the next one went to Metz, in Lorraine, 7-11 August, 1907. Cardinal Vincenzo Vannutelli was the Pope's legate, and the German Government suspended the law of 1870, forbidding processions, in order that the usual solemn procession of the Blessed Sacrament might be held. Each year the congress had become more and more definitely international, and at the invitation of Archbishop Bourne of Westminster it was decided to hold the nineteenth congress in London, the first under the auspices of, and among, English-speaking members of the Church.

In addition to these general congresses there had also been local ones, in all countries where Catholics were numerous, local gatherings of the Eucharistic leagues which were potent factors in the spread of the devotion. These were held in France, Germany, Belgium, Spain, Italy, England, Canada, Australia, and the United States. The first of these in the United States was at St. Louis, in September, 1901; the second at New York, in 1903; and the third at Pittsburgh, in 1907. The presidents of the Permanent Committee of the International Eucharistic Congresses, under whose direction all this progress was made were: Bishop Gaston de Ségur, of Lille; Archbishop de La Bouillerie, titular of Perga and condottor of Bordeaux; Archbishop Duquesnay of Cambrai; Cardinal Merrihill, Bishop of Lausanne and Geneva; Bishop Doutreloux of Liége, and Bishop Thomas Heylen of Namur, Belgium. After each congress this committee prepared and published a volume giving a report of all the papers read and the discussions on them in the various sections of the meeting, the sermons preached, the addresses made at the public meetings, and the details of all that transpired.

The most numerous and important of all the congresses, the whole Catholic world was at once interested in the nineteenth, which was held in London, 9-13 September, 1908, and regarded as the greatest religious triumph of its generation. In an affectionate letter voicing anew his interest in these congresses, the pope once more designated Cardinal Vincenzo Vannutelli as his legate to attend the sessions. More than three hundred and fifty years had elapsed since a legate from the pope had been seen in England. With him were six other Cardinals, fourteen archbishops, seventy bishops and a host of priests. No such gathering of ecclesiastics had ever been outside of Rome in modern times, and English Catholics prepared to make it locally even more memorable. The spirit of "that pure love and that simple faith as awaked by the tears and blood of persecution, and strengthened by the prayers of the remnant of the faithful in the dreary days of the penal laws, bore flower and fruit.

A distinguished escort met Cardinal Vannutelli when he landed at Dover, and an enormous crowd assembled to witness the arrival of a papal legate in England on a visit of this sort since the eleventh century.

On the next day, 9 September, the congress was solemnly opened in the cathedral at Westminster, by the legate, supported by Cardinals Gibbons of Baltimore, Archbishop of Ireland, Sancho y Hervás of Toledo, Ferrari
of Milan, Mathieu of France, and Mercier of Belgium. Bishops, priests, and laymen from all quarters of the globe were among them. The regular sessions began on 10 September, Archbishop Annette of Paris celebrating the Mass. Two sectional meetings in English and in French were then listened to by the papers in discussion. In the evening there was a great meeting of 15,000 people at the Albert Hall, to greet the papal legate, at which meeting resolutions pledging all to promote devotion to the Eucharist and unalterable fidelity to the Holy See were passed. The speakers included Archbishop Carr of Melbourne and Bruchesi of Rome. The brothers were present. W. W. R. M., who was the celebration of the Byzantine Rite by the Very Reverend Arsenius Attieh, archimandrite of the church of Saint-Julien-le-Pauvre of Paris, assisted by several Greek Assumptionist priests from Constantinople. The Mass on Sunday, 15 September, celebrated by the papal legate, and at which Cardinal Gibbons preached, closed the series of splendid ceremonies that marked the congress. Vespers followed, and then the solemn procession took place.

It had been intended to carry the Blessed Sacrament through the streets, but, owing to a protest and public clamour against this, made by the societies composing the Catholic Congress of All Britain, Mr. Asquith, sent a formal request to Archbishop Bourne on the part of “His Majesty’s Government”, for the abandonment of this programme, and this was complied with. The legate, attended by a guard of honour headed by the Duke of Norfolk, Earl Marshal of England, and made up of eleven English noblemen and the Duke of Orleans and the Comte d’Eu and some one hundred members of the English Deputies, after passing over the route, gave solemn benediction from the balcony of the cathedral to the multitude below. Telegraphing after the ceremony to Rome, Cardinal Vannutelli said to the Cardinal Secretary of State: “The Congress concluded with a great triumph to-day when the procession passed through the streets of London packed with crowds reaching continuous cheers for the papal legate and the other cardinals and prelates. The Sacred Host was not carried in the procession, but I gave a final benediction with the Sacred to the crowd from three open balconies on the façade of the cathedral. Members of the House of Lords formed an escort of honour for me. Perfect order was kept.”

The pope sent a special letter to the Archbishop of Westminster after the congress concluded, stating that, though it was the first of its kind in England, it must be looked on as the greatest of all, for its concourse of illustrious men, for the weight of its deliberations, for its display of faith, and for the magnificence of its religious functions. He thanked the archbishop and bishops who had taken any part in the proceedings. Before it closed the congress decided to have the session of 1900 meet at Cologne, and that of 1910 at Montreal.

François Désiré, Mathieu, Archbishop of Toulouse, France, who had attended the Congress, was stricken with an illness that necessitated an operation shortly after his arrival in London. He died in his hotel on the 25th of October following. Another great dignitary of the Church who was called to his reward shortly after assisting at this memorable congress was Ciriaco Maria, Cardinal Sancha y Herías, Archbishop of Toledo and Patriarch of the West Indies, who died at Toledo, 25 February, 1900, in the seventy-first year of his age.

THOMAS F. MEEHAN.

Eucharist Test. See ORDEAL.

Eucharist, Saint, first Bishop of Trier (Treves) in the second half of the third century. According to an ancient legend, he was one of the seventy-two disciples of Christ, and was sent to Gaul by St. Peter as bishop, together with the deacon Valerius and the subdeacon Maternus, to preach the Gospel. They came to the Rhine and to Elegia (Eyl) in Alsace, where Maternus died. His two companions hastened back to St. Peter and begged him to restore the dead man to life. St. Peter gave his pastoral staff to Eucharist, and told him to place it on the body of the dead man, who had been in his grave for forty days, returned to life. The Gentiles were then converted in large numbers. After founding many churches the three companions went to Trier where the work of evangelization progressed so rapidly that Eucharist chose that city for his episcopal residence. Among other miracles related in the legend he raised a dead person to life. An angel announced to him his approaching death and pointed out Valerius as his successor. Eucharist died 8 Dec., having been bishop for twenty-five years, and was interred in the church of St. John outside the city. Valerius was bishop for fifteen years and was succeeded by Maternus, who had in the meantime founded the dioceses of Cologne and Tongres, the latter being the pope of Rome, Gregory I. The pope appointed a staff of St. Peter, with which he had been raised to life, was preserved at Cologne till the end of the tenth century when the upper half was presented to Trier, and was afterwards taken to Prague by Emperor Charles IV.

In the Middle Ages it was believed that the pope used no crozier, because St. Peter had sent his episcopal staff to St. Eucharist; Fortunius, Democrat, in his Vitae (De Sacrif. Missae, 62). The same instance, however, is related of several other alleged disciples of St. Peter, and more recent criticism interprets the staff as the distinctive mark of an envoy, especially of a missionary. Missionaries in subsequent centuries, e.g. St. Boniface, were occasionally called ambassadors of St. Peter, the pope who sent them being the successor of Peter. Moreover, in medieval times the foundation of a diocese was often referred to as early a date as possible, in order thereby to increase its reputation, perhaps also its rights. Thus Paris gloried in Dionysius Areopagita as its first bishop; similarly ancient origins were claimed by other Frankish dioceses. In time, especially through the ravages of time, reliable earlier accounts were lost. When at a later period the lives of primitive holy founders, e.g. the saints of ancient Trier, came to be written anew, the gaps in tradition were filled out with various combinations and fanciful legends. In this way there originated in the monastery of St. Matthias near Trier the famous chronicle of Trier (Gesta Treverorum, ed. Waitz in Mon. Germ. Hist.; script., VIII, 111-174) in which there is a curious mixture of truth and error. It contains the account of the life of St. Eucharist given above. An amplification thereof, containing the lives of the three saints in question, is said to have been written by the monk Goldscher or Golscher, who lived in that monastery about the time the chronicler died. The life of Eucharist passed unchallenged into numerous medieval works. More recent criticism has detected many contradictions and inaccuracies in these ancient records, and it is almost universally believed at present that, with few exceptions, the first Christian missionaries came to Gaul, to which Trier then belonged, not earlier than about 250. Following Hontheim, Gmelin, van der Veer, others and other historians refer these holy bishops of Trier to a period following 250, though not all of them consider this as fully established. The feast of St. Eucharist is celebrated on 8 Dec.
Eucherius, Saint, Bishop of Lyons, theologian, b. in the latter half of the fourth century; d. about 449. On the death of his wife he withdrew to the monastery of Lérins, where his sons, Veranius and Salonius, lived, and soon afterward to the neighbouring island of Lerona (now Sainte-Marguerite), where he devoted his time to study and mortification. Desirous of joining the anchorites in the deserts of the East, he cast anchoritically in letters, some of which he has called his "Collations", describing the daily lives of the hermits of the Thebaid. It was at this time that Eucherius wrote his beautiful letter "De laude Eremi" to St. Hilary of Arles (c. 428). Though imitating the virtues of the Egyptian solitaries, he kept in touch with men renowned for learning and piety, e. g. Cassian, St. Hilary of Arles, St. Honoratus, later Bishop of Vienne, and Ancelinus, to whom he wrote his "Epistola parentica de contemptu mundi". The fame of Eucherius was soon so widespread in southeastern Gaul, that he was chosen Bishop of Lyons. This was probably in 434; it is certain, at least that he attended the First Council of Orange (441) as Metropolitan of Lyons, and that he retained this dignity until his death. In addition to the above-mentioned letters, Eucherius wrote "Formularium spiritualis intelligentiae ad Veranum", and "Institutiones ad Saloniun", besides many homilies. His works have been published separately and among the writings of the Fathers. There is no critical edition but the text is most accessible in Migne, "P. L.", L. 683-894. In the same volume, appendix, 893-1214 is to be found a death, that of the abbot, Eucherius, of same of doubtful authenticity, others certainly apocryphal.

Eucherti Liugdunensis episcopi ( Lyons, 1877); Rev. du Lyonais (Lyons, 1877), VII, 19, 449-452; Léon Clugnet, Tr. Shahal (Freiburg-im-Br., St. Louis, 1906), 518-19.

Euchites. See Messalians.

Euchologist (εὐχολόγων), the name of one of the chief service-books of the Byzantine Church. It contains more or less parts to our Missal and Ritual. The Euchologist contains first, directions for the deacon at the Hesperinon (Vespers), Orthros (Lauds), and Liturgy. The priest’s prayers and the deacon’s litanies for those two hours follow. Then come the Liturgies; first, rubrics for the holy Liturgy in general, and a long note about the arrangement of the bread at the communion. Then come the Liturgy, in which the structure of the service is given, and the frame into which the others are fitted. The Euchologist contains only the parts of priest and deacon at full length, first for the Chrysostom-Liturgy, then for those parts of St. Basil’s Liturgy that differ from it, then for the Presanctified-Liturgy, beginning with the Historion that always precedes it. After the Liturgies follow a collection of sacramental and monastic prayers, with various rules, canons, and blessings. First the rite of churching the mother after child-birth (εὐχεῖα εἶς γυναικα ληχδ), adapted for various conditions, then certain "canons of the Apostles and Fathers" about baptism, prayers to be said over catechumens, the rite of baptism, followed by the washing (ἀπλωσια) of the child, seven days later, eucharistic prayer, the Liturgy, and the rite of consecrating cism (ἀμβώνος) on Maundy Thursday. Then follow the ordination services for deacon, priest, and bishop (there is a second rite of ordaining bishops "according to the exposition of the most holy Lord Metropolis, Metropolitan of Nysa"), the blessing of a hegumenos (abbot) and of other superiors of monasteries, a prayer for those who begin to serve in the Church, and the rites for minor orders (reader, singer, and subdeacon).

The ceremonies for receiving novices, clothing monks in the mandyas (the "little habit") and in the "great and angelic habit" come next, the appointing of a priest to be a confessor (πρεσβυτερος) and the manner of hearing confessions, prayers to be said over persons who take a solemn oath, for those who lurc canonical punishments, and for those who are absolved from them. Then comes a collection of prayers, the Canons. Our Lord's for "forgiveness of sins", written by a monk, Euthymius, follows, and we come to the rites of espousal, marriage (called the "crowning", Στυφάνωμα, from the most striking feature of the ceremony), the prayers for taking off the crowns eight days later, the rite of second marriages (called, as by us, "bigamy", διαμοῖνα, in which the persons are not crowned), and the very longunction of the sick (τῷ ἁγίῳ ἐκλεον), performed normally by seven priests. Next, blessings for new churches and antinimias (the corporal containing relics they use for the Liturgy; it is really a kind of portable altar), the ceremony of washing the altar on Maundy Thursday, erection of a Staurouregum (exempt metropolia), special prayers of ascetics (διαμοῖνα) and the great one (used on the Epiphany) followed by a sacramental which consists of bathing (πνεύμα) afterwards. After one or two more ceremonies of, such as a curious rite of kneeling (γεφυρώμας, otherwise a rare gesture in the Eastern Churches) on the evening of Whitsunday, exorcisms, prayers for the sick and dying, come, the burial services for laymen, monks, bishops. Then follow the rite of giving prayers and hymns (marked εὐχαί διάφωνα), canons of pence, against earthquakes, for time of pestilence, and war, and two addressed to Our Lady. More prayers for various occasions end the book.

In modern Euchologia, however, it is usual to add the "Apostles" (the Epistles) and Gospels for the chief feasts; these are taken from the two books that contain the whole cycle of blessings, canons, etc., and the last of the court of the oecumenical patriarch in choir, with rubrical directions for their various duties during the Liturgy. This last chapter is found, of course, only in the Orthodox book.

It will be seen, then, that the Euchologion is the handbook for bishops, priests, and deacons. It contains only the Liturgy applicable to all those who have to use their own choir-books (Triodion, Pentekostion, Octoechos, Parakletike, Menologion). The Euchologion, in common with all Byzantine service-books, suffers from an amazing want of order. One discerns a certain fundamental system in the order of its chief parts; but the shorter services, blessings, petitions, hymns are inserted throughout pell-mell.

The first printed edition was published in Venice in 1526. The Orthodox official edition in Greek is printed (as are all their books) at the Phoenix press (τυπογραφίαν δ Φοῖνικ) at Venice (7th ed., edited by Spiridion Zerbas, 1885). There is also an Athenian edition and one of Constantinople. The Churches that use other liturgical languages have pressures (generally at the same time that Apostolikon, Meier). For their translations, Proost Alexios Maltez of the Russian Embassy Church at Berlin has edited the Euchologion in Old Slavonic and German with notes (Vienna, 1861, reprinted in Berlin, 1892). Unitists use the Propaganda edition and have a compendium (μυχῶν εὐχολόγων) containing only the necessary elements, i.e. blessedness, ordination, marriage, and confessions (Rome, 1872). J. Goar, O.P., edited the Euchologion with very complete notes, explanations, and illustrations (Euchol-
Eucrates. See Moschus, John.

Eudemonism. See Hedonism.

Eudes, Jean, Blessed, French missionary and founder of the Eudists and of the Congregation of Our Lady of Charity; author of the liturgical worship of the Sacred Hearts of Jesus and Mary; b. at Ri, France, 14 Nov., 1601; d. at Caen, 19 Aug., 1680. He was a brother of the French historian, Francois Eudes de Mézeryer. At the age of fourteen he took a vow of chastity. After brilliant studies with the Jesuits at Caen, he entered the Oratory, 25 March, 1625. His masters and models in the spiritual life were Fathers de Bérulle and de Condren. He was ordained priest 20 Dec., 1625, and began his sacerdotal life with heroic labours for the victims of the plague, thus ravaging the country. As a missionary, Father Eudes became famous. Since the time of St. Vincent Ferrer, France had probably not seen a greater. He was called by Olivier de Lusignan, the founder of the Oratory, to the Congregation of Our Lady of Charity of the Holy Refuge, to provide a refuge for women of ill-fame who wished to do penance. The society was approved by Alexander VII, 2 Jan., 1666. With the approbation of Cardinal de Richelieu and a great number of others, Father Eudes severed his connexion with the Oratory to establish the Society of Jesus and Mary for the education of the laity for missionary work. This congregation was founded at Caen, 25 March, 1643, and was considered a most important and urgent work (see Eudists).

Father Eudes, during his long life, preached not less than one hundred and ten missions, three at Paris, one at Versailles, one at St-Germain-en-Laye, and the others in different parts of France. Normally was the privilege of his missions of one hundred hours. He obtained from Clement XI six Bulls of indulgences for the Confraternities of the Sacred Heart already erected or to be erected in the seminaries. He also established the Society of the Heart of the Mother Most Admiraible—which resembles the Third Orders of St. Francis and St. Dominic. This society now numbers from 20,000 to 25,000 members. Father Eudes was the founder of several seminaries of Caen and Coutances to the Sacred Hearts. The feast of the Holy Heart of Mary was celebrated for the first time in 1643, and that of the Sacred Heart of Jesus in 1672, each as a double of the first class with an octave. The Mass and Office proper to these were composed by Father Eudes, who thus had the honour of preceding the Blessed Marguerite-Marie in establishing the devotion to the Sacred Hearts. For this reason, Pope Leo XIII, in proclaiming his virtues heroic in 1903, gave him the title of “Author of the Liturgical Worship of the Sacred Heart of Jesus and Holy Heart of Mary.” Father Eudes wrote a number of books remarkable for elevation of doctrine and simplicity of style. His principal works are:—”Le Royaume de Jesus”; “La vie de la Pieuse Communion de l’Eveque de Liege”; “Le Saint Baptême”; “Le Bon Confesseur”; “Le Prédicateur Apostolique”; “Le Cœur Admiraible de la Très Sainte Mère de Dieu”. This last is the first book ever written on the devotion to the Sacred Hearts. His virtues were declared heroic by Leo XIII, 6 Jan., 1903. The miracles procured for his beatification by the Holy See were confirmed by Pius X, 3 May, 1909, and he was beatified 25 April, 1909. (Œuvres Complètes du V. J. Eudes (1905—); MONTIGNY, Vie du R. P. Jean Eudes (Paris, 1827); HERBERGUE, Le Père Eudes, 6 vols. (Paris, 1904); NAGET, Mgr., Vie du P. Eudes (Caen, 1890); BOULAY, Vie du V. Jean Eudes (Paris); JOLL. Le V. P. Eudists, or Society of Jesus and Mary, an ecclesiastical society instituted at Caen, France, 25 March, 1643, by the Venerable Jean Eudes. The principal works of the society are the education of priests in seminaries and the giving of missions. The end which Father Eudes assigned to his society made him decide not to introduce religious vows. He was permitted the right to ordain better than the clergy and to elevate them to the very dignity with which they were invested the reason and means of rising to eminent perfection, were in a position to inspire young clerics with a high idea of the priesthood and of the sanctity which it required. He also felt that bishops would not so willingly give their seminaries over to priests who were not entirely subject to them. Father Eudes shared the opinions of Cardinal de Bérulle and Father Olier, who did not think it proper to admit religious vows in the orders which they founded. Even St. Vincent de Paul did so only after great hesitation and on the condition, ratified by the sovereign pontiff, that the Priests of the Mission should not form a religious order, properly so called, but an ecclesiastical society.

The Society of Jesus and Mary is, therefore, a religious order, but an ecclesiastical body under the immediate jurisdiction of the bishops, to aid in the formation of the clergy. It is composed of priests, and of postulants who are admitted after a probation of three years and three months. There are also lay brothers employed in temporal affairs, but who do not wear the ecclesiastical habit. To develop the spirit of Jesus Christ, a foundation was made in the members of the society, Father Eudes caused to be celebrated every year in his seminaries the feast of the Holy Priesthood of Jesus Christ and of all Holy Priests and Levites. After the feast of the Sacred Hearts of Jesus and Mary it is one of the principal in the community. The solemnity begins on 13 November and is celebrated with an octave. It thus serves as a preparation for the renewal of the clerical promises on 21 November, the feast of the Presentation of the Blessed Virgin. As early as 1649 Father Eudes had prepared an Office proper to the feast. Some years later the feast and office were adopted by the Sulpician Fathers. Although not a religious order, the Society of Jesus and Mary is subject to discipline which does not differ in any respect from that of orders. Its administration is modelled on that of the Oratory to which Father Eudes had belonged for twenty years. The supreme authority resides in a general assembly which names the superior general and which is called, at intervals, to control his administration. It alone can make permanent laws. In the intervals between the general assemblies, the superior general, named for life, exercises full authority in matters spiritual and temporal. He has the right to name and depose local superiors, to fix the personnel of each house, to make the annual visit, to admit, and, in case of necessity, to dismiss, subjects, to accept or to give up foundations, and, in general, to perform, or at least to authorize, all important acts. He is aided by assistants, named by the general assembly, who have a deciding vote in temporal affairs, and a consulting vote only in other questions.

During the lifetime of Father Eudes, the society founded seminaries at Caen (1643), Coutances (1650), Lisieux (1650), Rouen (1658), Evreux (1667), and Rennes (1670). These were all “grand” seminaries; Father Eudes never thought of founding any other. Since 1700, however, the Eudists have admitted priests with newly granted benefices who came for further study, those who wished to make retreats, and even lay students who followed the courses of the Faculty of Theology. After his death directors were
appointed for the Seminaries of Valognes, Arranches, Dol, Senlis, Blois, Domfront, and Seéz. At Rennes, Rouen, and some other cities seminaries were conducted for students of a poorer class who were called to exercise the ministry in country parishes. These were sometimes called "little" seminaries. The postulants were admitted early and made both their profane and ecclesiastical studies. During the French Revolution, three Eudists, Fathers Hébert, Potier, and Lefranc, perished at Paris in the massacres of September, 1792. The cause of their beheading with that of some other victims of September has never been inquired into by the Roman Catholics; the confessor of King Louis XVI, and shortly before his death he made the king promise to consecrate his kingdom to the Sacred Heart if he escaped from his enemies. After the Revolution the society had great difficulty in establishing itself again, and it was only in the second half of the nineteenth century that it began to prosper. Too late to take over again the direction of seminaries formerly theirs, the Eudists entered upon missionary work and secondary education in colleges. The "Law of Associations" (1906) brought about the ruin of the establishments which they had in France. Besides the scholastics which they have opened in Belgium and in Spain, they direct seminaries at Carthagena, at Antioquia, at Pamplona, at Pamant (Spain), and other places in South America. In Canada they have the Vicariate Apostolic of the Gulf of St. Lawrence, a seminary at Halifax, N. S., a college at Church Point, N. S., and at Caraquet, N. B., and a number of other establishments less important. They number about fifteen establishments and about one hundred and twenty priests in Canada. In France, where the majority still remains, the Eudists continue their work in many missions and to take part in various other works.

Charles Lebrun.

Eudocia (Eudokia).—Ella Eudocia, sometimes wrongly called Eudoxia, was the wife of Theodosius II; died c. 460. Her original name was Athenais, and she was the daughter of Leontius, one of the last pagans who taught rhetoric at Athens. Malalas and other Byzantine chroniclers make the most of the romantic story of her marriage. Leontius when dying left his wife to his two sons; so Athenais he bequeathed only 100 pieces of gold with the explanation that she would not need more, since "her luck was greater than that of all women." She came to Constantinople to dispute this will, and was there seen by Pulcheria, the elder sister of Theodosius II, who ruled for him till he should be of age. The emperor had already expressed his wish to marry (he was just twenty years old); both he and Pulcheria were greatly delighted with Athenais. Malalas (op. cit., p. 353) enlarges on her beauty. She was instructed in the Christian Faith and baptized by the Patriarch Atticus. On June 7, 421, she married Theodosius. At her baptism she had taken the name Eudocia. Pulcheria took charge of her education in the private school called "little" seminaries, and he posed Theodosius and Eudocia had one daughter, Eudokia, who married the Western Caesar, Valentinian III (425-455). It seems that after the wedding a certain rivalry began between Pulcheria and Eudocia and that this was the beginning of the empress's troubles. In 438 Eudocia made her first pilgrimage to Jerusalem, and the emperor after her example led a little pilgrimage with a quotation from Homer that greatly delighted the citizens—so much so that they set up a golden statue in her honour. From Jerusalem she brought back St. Peter's chains, of which she sent half to her daughter in the West, who gave it to the pope. The basilica of St. Peter ad Vincula was built to receive this chain (Brev. Rom., I, Aug., Lect. 4-6).

In 441 Eudocia fell into disgrace through an unjust suspicion of infidelity with Paulinus, the "Master of the Offices". Paulinus was murdered and Eudocia banished. In 442 she went back to Jerusalem and lived there till her death. She became for a time an ardent Monophysite. In 453 St. Leo I of Rome wrote to convert her. She then returned to the Catholic Faith and used her influence in favour of the Council of Chalcedon (451). Theodosius II died in 450, Pulcheria in 453; another dynasty was soon in place, and the Eudocian party was the Great. Eudocia, forgotten by the world, spent her last years in good works and quiet meditation at the holy places of Jerusalem. She was buried in the church of St. Stephen, built by her outside the northern gate. Byzantine history offers few so strange or picturesque stories as that of the little pagan Athenian who, after having been mistress of the civilized world, was canonized as an apostolic mystic, almost a nun, by the tomb of Christ. Eudocia wrote much poetry. As empress she composed a poem in honour of her husband's victory over the Persians; later at Jerusalem she wrote religious verse, namely, a paraphrase of a great part of the Bible (warmly praised by Photius, Bibliotheca, 183), a life of Christ in Homeric style, and another in Latin hexameters. She was of Cyprian and Justina (a legend about a converted magician that seems to be one version of the Faust story; see Th. Zahn, "Cyprian von Antiochien und die deutsche Faustsage," 1887). The extant fragments of these poems were edited by A. Ludwig, "Eudocia Auguste . . carminum graecorum reliquiae" (Leipzig, 1837). See also fragments in P. G., LXXXV, 872 ff.

Another Byzantine empress of the same name (d. 404), like the above often wrongly called Eudocia, daughter of the Frank general Bauto, and wife of Emperor Arcadius, was the cause of the first and second exile of St. John Chrysostom. After the fall of the eunuch Eutropius this beautiful but proud and unendowed woman dominated Arcadius. She was the mother of Pulcheria and Theodosius II. The homily against her attributed to St. John Chrysostomus (P. G., LIX, 485) is not genuine. Cf. Tillemont, "Histoire des Empereurs" (Paris, 1701), V, 785.

Eudocia, a titular see of Galatia Secundus in Asia Minor, suffragan of Pessinus. Eudocias is mentioned only by Hierocles (Symeodemos, 682, 2) and Pathecy (Notit. episc., I, VIII, IX). Two bishops are known. Aquilas in 451 and Menas in 536 (Lequien, Or. christ., I, 495). Another is spoken of in the life of St. Theodore of Syce, about the end of the sixth century. The original name of the town is unknown, Eudocias being the name given to it in honour of either the mother or of the daughter of Theodosius II. It was perhaps founded by the queen Eudocia, who was buried there. She was a beautiful woman, and stood perhaps at the modern Yurme, in the valley of Ayorga. Others, however, identify Eudocia with Akkia, whose site is unknown, and place Germe at Yurme.

S. Petrides.

Eugendus (Saint; Augustendus; Fr. Oyand, Oyan), fourth Abbot of Condat (Jurin), b. about 419, at Izerne, Ain, Franche-Comté; d. 1 Jan., 510, at Condat. He was instructed in reading and writing by his
father, who had become a priest, and at the age of seven was given to Sts. Romanus and Lupicinum to be educated at Condat, in the French Jura. Thenceforth he never left the monastery. He imitated the example of the above-named saints with such zeal that it was difficult to tell which of the two he resembled more. Eugendus acquired much learning, read the Greek and Latin authors, and was well versed in the Sacred History of his Church, but his piety and humility did not want to be ordained priest. Abbot Minasius made him his coadjutor, and after the former's death (about 496) Eugendus became his successor. He always remained the humble religious that he had been before, a model for his monks by his penitence and piety, which God signified to acknowledge. The order, which had been founded by the Abbot Minasius, had in the course of time built two monasteries, the rule of Tarnate is thought to have served as a model. Condat began to flourish as a place of refuge for all those who suffered from the misfortunes and afflictions of those eventful times, a school of virtue and knowledge amid the surrounding darkness, an oasis in the desert as late as the sixteenth century. He felt his end approaching he had his breast anointed by a priest, took leave of his brethren, and died quietly after five days.

A few years after his death, his successor, St. Viventius, erected a church over his tomb, to which numerous pilgrims travelled. A town was founded, which was called, after the saint, Saint-Oyand de Joux, and which rapidly became one of the most important in the sixteenth and seventeenth centuries, while its former name of Condat passed into oblivion. But when St. Claudius had, in 687, resigned his Diocese of Besançon and had died, in 696, as twelfth abbot, the number of pilgrims who visited his grave was so great that, since the thirteenth century, the name Saint-Claude came more and more into fashion, a name which has now supplanted all others. The first feast of St. Eugenius was at first transferred to 2 Jan.; in the Dioceses of Besançon and Saint Claude it is now celebrated on 4 Jan. Acta SS., January, 1. 49, 54; Mon. Germ. Hist. SS. Res. Merov., III, 154, 156, ed. Leclerc, who wrongly holds this text of his life as non-authentic; Anaeletta Bollandiana, XVII, 367; Marbilon, Acta SS., ord. a. Benedict, I, 579-76. GABRIEL MEYER.

Eugene I-IV, Popes.—Eugene I, Saint, was elected 10 Aug., 654, and d. at Rome, 2 June, 657. Because he would not submit to Byzantine dictation in the matter of Monothelism, St. Martin I was forcibly carried off from Rome (18 June, 653) and kept in exile till his death (September, 655). What happened in Rome after his departure is uncertain. It is probable that the Church was governed in the manner usual in those days during a vacancy of the Holy See, or during the absence of its occupant, viz., by the archpriest, the archdeacon, and the primate of the diocese. But after about a year and two months a successor was given to Martin in the person of Eugene (10 Aug., 654). He was a Roman of the first ecclesiastical region of the city, and was the son of R mammus. He had been a cleric from his earliest years, and is set down by his biographer as distinguished for his gentleness, sanctity, and generosity. With regard to the circumstances of his election, it can only be said that if he was forcibly placed on the Chair of Peter by the power of the emperor, in the hope that he would follow the imperial will, these calculations miscarried; and that, if he was elected against the will of the reigning pope in the first instance, Pope Martin subsequently acquiesced in his election (Ep. Martini xvi in P. L., LXXXVII).

One of the first acts of the new pope was to send legates to Constantinople with letters for the Emperor Constans II, informing him of his election, and presenting a profession of his faith. But the legates allowed themselves to be deceived, or gained over, and brought back a synodical letter from Peter, the new Patriarch of Constantinople, by which the emperor's envoy, who accompanied them, brought offerings for St. Peter, and a request from the emperor that the pope would enter into communion with the Patriarch of Constantinople. Peter's letter proved to be written in the most obscure style, and avoided making any specific declaration as to the number of "wills" by which he had been elected; after this communication to the clergy and people in the church of St. Mary Major, they not only rejected the letter with indignation, but would not allow the pope to leave the basilica until he had promised that he would not on any account accept it (656). So furious were the Byzantine officials at this contemptuous rejection of the wishes of their emperor and patriarch that they threatened, in their coarse phraseology, to tear "the face of the pope" with their hands. But when the state of politics allowed it, they would rost Eugene, and all the talkers at Rome along with him, as they had rost Pope Martin I (Disp. Int. S. Maxim. et Theod. in P. L., CXXIX, 654). Eugene was saved from the fate of his predecessor by the advance of the Moslems who took Rhodes in 654, and defeated Constans himself in the naval battle in the Bay of Joux, 28 June, 654. But, in a word, is this his faith and bishops who presented him to his master. Eugene placed Eugene, his peaceful, honest, discreet, and chaste, as his "servant of God, prayed for him, and blessed him" (Bede, Hist. Eccles., V, 19; Eddius, In vit. Wilf., e. v). Nothing more is known of Eugene, except that he consecrated twenty-one bishops for different parts of the world, and that he was buried in St. Peter's. In the Roman Martyrology he is reckoned among the saints of 10 June. Liber Pontificalis, ed. DuChesne, I, 341-2; various documents in P. L., CXXIX, LXXXVII; Parchin, in Acta SS. (1695), I, 15 June, 220-2 (2a. 214-6); Mann, Lives of the Early Popes, I, pt. 1, 606 sqq.

Eugene II, elected 6 June, 824; died 27 Aug., 827. On the death of Paschal I (Feb. 1-May, 824) there took place a divided election. The late pope had died in the midst of a dispute concerning the power of the Roman nobility, who, to strengthen their position against him, had turned for support to the Frankish power. When he died these nobles made strenuous efforts to replace him by a candidate of their own; and despite the fact that the clergy put forward a candidate likely to continue the policy of Paschal the nobles rejected him. Eugene was consecrated without any difficulty by his archbishop, of S. Sabina on the Aventine, although by a decree of the Roman Council of 769, under Stephen IV, they had no right to a real share in a papal election. Their candidate is stated, in earlier editions of the "Liber Pontificalis", to have been the son of Boemund; but in the recent by Bishop Hildesheimer. Whilst archbishop of the Roman Church he is credited with having fulfilled most conscientiously the duties of his position and after he became pope he beautified his ancient church of S. Sabina with mosaics and with metal work bearing his name, which were intact in the sixteenth century. Eugene is described by his biographer as simple and humble, learned and eloquent, handsome and generous, a lover of peace, and wholly occupied with the thought of doing what was pleasing to God.
The election of Eugene II was a triumph for the Franks, and they resolved to improve the occasion. Emperor Louis the Pious accordingly sent his son Lothair to Rome to strengthen the Frankish influence. Those of the Roman nobles who had been banished during the preceding reign, and who had fled to Frankland (Francia), were recalled, and their property was restored to them. A concordat or constitution was then agreed upon between the pope and the emperor (824). This "Constitutio Romana", in nine articles, was drawn up seemingly with a view of advancing the imperial pretensions in the city of Rome, but at the same time giving the pope and his officials the power to deal with nobles. It decreed that those who were under the special protection of the pope or emperor were to be inviolable, and that proper obedience be rendered to the pope and his officials; that church property be not plundered after the death of a pope; that only those to whom the right had been given by the decree of Stephen IV, in 789, should take part in papal elections; that two commissioners (missi) were to be appointed, the one by the pope and the other by the emperor, who should report to them how justice was administered, so that any failure in its administration might be corrected by the pope, or, in the event of his not doing so, by the emperor; that the people should be judged according to the law (Roman, Salic, or Lombard) they had elected to live under; that it should be made contrary to the canon; that robbery with violence be put down; that when the emperor was in Rome the chief officials should appear before him to be admonished to do their duty; and, finally, that all must obey the Roman pontiff. By command of the pope and Lothair the people had to swear that, saving the fidelity they had promised the pope, they would obey the Emperors Lothair and Louis, provided no fidelity was required to be made contrary to the canons; and would not suffer the pope-elect to be consecrated save in the presence of the emperor's envoys.

Seemingly before Lothair left Rome, there arrived ambassadors from Emperor Louis, and from the Greeks concerning the image-question. At first the Greek emperor, Michael II, made attacks planted towards the image-worshippers, and their great champion, Theodore the Studite, wrote to him to exhort him "to unite us [the Church of Constantinople] to the head of the Churches of God, viz. Rome, and through it with the three Patriarches" (Epp., I, lxxiv); and in accordance with ancient custom to refer any doubtful points to the decision of Old Rome (II, lxxxvi; cf. III, xlii). But Michael soon forgot his tenets, and bitterly persecuted the image-worshippers, and endeavoured to secure the co-operation of Louis the Pious. He also sent envoys to the pope to consult him on certain points connected with the worship of images (Einhard, Annales, 824). Before taking any steps to meet the wishes of Michael, Louis sent to ask the pope to proceed to a large number of his bishops to make them agreeable, and make a selection of passages from the Fathers to elucidate the question the Greeks had put before them. The leave was granted, but the bishops who met at Paris (825) were incompetent for their work. Their collection of extracts from the Fathers was a mass of confused and ill-digested lore, and both their conclusions and the interest attached to them by the Greeks were based on a complete misunderstanding of the decrees of the Second Council of Nicaea (cf. P., L., XVIII, p. 1293 sqq.). Their labours do not appear to have accomplished much; nothing at any rate is known of their consequences.

In 826 Eugene held an important council at Rome of sixty-two bishops, in which thirty-eight disciplinary decrees were pronounced. Two of these decrees are noteworthy as showing that Eugene had at heart the advance of learning. Not only were ignorant bishops and priests to be suspended till they had acquired sufficient learning to perform their sacred duties, but it was decreed that, as in some localities there were neither masters nor zeal for learning, masters were to be attached to the episcopal palaces, cathedral churches and other places, to give instruction in sacred and polite literature (can., xxxiv). To help on the work of the conversion of the North, Eugene wrote commending St. Ansgr, the Apostle of the Scandinavians, and his companions "to all the sons of the Catholic Church" (Jaffé, 2564). Coins of this pope are extant bearing his name and that of Emperor Louis. It is supposed, for no document records the fact, that, in accordance with the custom of the time, he was buried in St. Peter's.

Horace K. Mann.

EUGENE III, BLESSED (BERNARDO PIGNATELLI),
born in the neighbourhood of Pisa, elected 15 Feb., 1145; d. at Tivoli, 8 July, 1153. On the very day that Pope Lucius II succumbed, either to illness or wounds, the Sacred College, foreseeing that the Roman populace would make a determined effort to force the new pontiff to abdicate his temporal power and swear allegiance to the Senatus Populusque Romanus, hastily buried the deceased pope in the Lateran and prepared for the election of a new pontiff and the removal of the new pope to the Appian Way. Here, for reasons unascertained, they sought a candidate outside their body, and unanimously chose the Cistercian monk, Bernard of Pisa, abbot of the monastery of Tre Fontane, on the site of St. Paul's martyrdom. He was enthroned as Eugene III without delay in St. John Lateran, and since residence in the rebelled papal see was impossible, the new pope fled to the country. Their rendezvous was the monastery of Farfa, where Eugene received the episcopal consecration. The city of Viterbo, the hospitable refuge of so many of the afflicted medieval popes, opened its gates to welcome him; and thither he proceeded to await developments. Though powerless in face of the Roman mob, he was assured by embassies from all the European powers that he possessed the sympathy and affectionate homage of the entire Christian world.

Concerning the parentage, birth-place, and even the original name of Eugene, each of his biographers has advanced a different opinion. All that can be affirmed with certainty is that he was born in the territory of Pisa. Whether he was a Pisan, like his fellow-priest, Bernard of Pignatelli, and whether he received the name of Bernardo in baptism or only upon entering religion, must remain uncertain. He was educated in Pisa, and after his ordination was made a canon of the cathedral. Later he held the office of vicus dominus or steward of the temporalities of the diocese. In 1130 he came under the magnetic influence of St. Bernard of Clairvaux; five years later when the saint returned home from the Synod of Pisa, the vicus dominus accompanied him as a novice. In course of time he was employed by his order on several important affairs; and lastly was sent with a colony of monks to repeople the ancient Abbey of Farfa; but innocent II placed them instead at the Tre Fontane.

St. Bernard received the intelligence of the elevation of his disciple with astonishment and pleasure, and gave expression to his feelings in a paternal letter addressed to the new pope, in which occurs the famous passage so often quoted by reformers, true and false: "Who will grant me to see, before I die, the Church of God as in the days of old when the Apostles let down their garments, "Receive, when ye are anointed, the Holy Ghost"? The saint, moreover, proceeded to compose in his few moments of leisure that admirable handbook for popes called "De Consideratione". Whilst Eugene sojourned at Viterbo, Arnold of Brescia
EUGENE 600

EUGENE

(q. v.), who had been condemned by the Council of 1139 to exile from Italy, ventured to return at the beginning of the new pontificate and threw himself on the clemency of the pope. Believing in the sincerity of his repentance, Eugene absolved him and enjoined on him as penance fasting and a visit to the tombs of the Apostles. If the veteran demagogue entered Rome in a penitential mood, the sight of democracy based on his own principles soon caused him to revert to his former self. He placed himself at the head of the movement, and his incendiary philippics against the bishops, cardinals, and even the ascetic pontiff who treated him with extreme lenity, were received with enthusiasm. He threatened Rome itself with invasion by Saracens. The palaces of the cardinals and of such of the nobility as held with the pope were razed to the ground; churches and monasteries were pillaged; St. Peter's church was turned into an arsenal; and pious pilgrims were plundered and maltreated.

But the storm was too violent to last. Only an idiot could fail to understand that medieval Rome without the pope had no means of subsistence. A strong party was formed in Rome and the vicinity consisting of the principal families and their adherents, in the interests of order and the papacy, and the democrats were induced to listen to words of moderation. A treaty was entered into by which Eugene was preserved but subjected to the papal sovereignty and swearing allegiance to the supreme pontiff. The senators were to be chosen annually by popular election and in a committee of their body the executive power was lodged. The pope and the senate should have separate courts, and an appeal could be made from the decisions of either court to the other. By virtue of this treaty Eugene made a solemn entry into Rome a few days before Christmas, and was greeted by the fickle populace with boundless enthusiasm. But the dual system of government proved unworkable. The Romans demanded the destruction of Tivoli. This town had been faithful to Eugene during the rebellion of the Romans and merited his protection. He therefore refused to permit it to be destroyed. The Romans growing more and more turbulent, he retired to Castle S. Angelo, thence to Viterbo, and finally crossed the Alps, early in 1146.

Problems lay before the pope of vastly greater importance than the maintenance of order in Rome. The Christian principalties in Palestine and Syria were in a state of exciting confusion. The death of Baldwin II (1144) had aroused consternation throughout the West, and already from Viterbo Eugene had addressed a stirring appeal to the chivalry of Europe to hasten to the defence of the Holy Places. St. Bernard was commissioned to preach the Second Crusade, and he acquitted himself of the task with such success that within a couple of years two magnificent armies, consecrated by Blessing of the Pope, the King of France, were on their way to Palestine. That the Second Crusade was a wretched failure cannot be ascribed to the saint or the pope; but it is one of those phenomena so frequently met with in the history of the papacy, that a pope who was unable to subdue a handful of rebellious subjects could hurl all Europe against the Turks. Even in the height of his most fruitful years in France, intent on the propagation of the Faith, the correction of errors and abuses, and the maintenance of discipline. He sent Cardinal Breugnac (afterwards Adrian IV) as legate to Scandinavia; he entered into relations with the Orientals with the view to reunion; he proceeded with vigour against the nascent Manichean heresies. In several synods (Paris, 1147; Troyes, 1148), notably in the great Synod of Reims (1148), canons were enacted regarding the dress and conduct of the clergy. To ensure the strict execution of these canons, the bishops who should neglect to enforce them were threatened with suspension. Eugene was inexorable in punishing the unworthy. He deposed the metropolitans of York and Mainz, and, for a cause which St. Bernard thought not sufficiently grave, he withdrew the pallium from the Archbishop of Reims. But if the sanctity of pontifical could at times be severe, this was not his natural disposition.

"Never," wrote Ven. Peter of Cluny to St. Bernard, "have I found a truer friend, a sincerer brother, a purer father. His ear is ever ready to hear, his tongue is swift and mighty to advise. Nor does he never act except as one who has taken upon himself some equal or an inferior. . . I have never made him a request which he has not either granted, or so refused that I could not reasonably complain." On the occasion of a visit which he paid to Clairvaux, his former companions discovered to their joy that "he who externally shone in the pontifical robes remained in his heart an observant monk."

The prolonged sojourn of the pope in France was of great advantage to the French Church in many ways and enhanced the prestige of the papacy. Eugene also encouraged the new intellectual movement to which Peter Lombard had given a strong impulse. With the aid of Cardinal Pulius, his chancellor, who had established the University of Oxford on a lasting footing, Eugene induced the papacy to better form. He encouraged Gratian in his herculean task of arranging the Decretals, and we owe to him various useful regulations bearing on academic degrees. In the spring of 1148, the pope returned by easy stages to Italy. On 7 July, he met the Italian bishops at Cremona, promulgated the canons of Reims for Italy, and solemnly excommunicated Arnaud, Count of Toulouse, and the papal legates to whom Eugene had yielded to the popes. Eugene, having brought with him considerable financial aid, began to gather his vassals and advanced to Viterbo and thence to Tusculum. Here he was visited by King Louis of France, whom he reconciled to his queen, Eleanor. With the assistance of Roger of Sicily, he forced his way into Rome (1149), and celebrated Christmas in the Lateran. His stay was not of long duration. During the next three years the Roman court wandered in exile throughout the Campagna while both sides looked for the intervention of Conrad of Germany, offering him the imperial crown. Aroused by the earnest exhortations of St. Bernard, Conrad finally decided to descend into Italy and put an end to the anarchy in Rome. Death overtook him on the road to Rome, near the fall of Tivoli, 1152, leaving the task to his more energetic nephew, Frederick Barbarossa. The envos of Eugene having concluded with Frederick at Constance, in the spring of 1153, a treaty favourable to the interests of the Church and the empire, the more moderate of the Romans, seeing that the days of democracy were numbered, joined with the nobles in putting down the mob. Eugene is said to have gained the affection of the people by his affability and generosity. He died at Tivoli, whither he had gone to avoid the summer heats, and was buried in front of the high altar in St. Peter's, Rome. St. Bernard followed him to the grave (28 Dec., 1155). The popes, three legates being but as usual of St. Bernard," says Gregorovius, "had always continued to wear the coarse habit of Clairvaux beneath the purple; the stoic virtues of monasticism accompanied him through his stormy career, and invested him with that power of passive resistance which has always remained the most effectual weapon of the popes." St. Antoninus pronounces Eugene "the greatest and most afflict of the popes." Pius IX by a decree of 25 Dec., 1872, approved the cult which from time immemorial the Pisans have rendered to their countryman, and ordered him to be honoured
with mass and Office ritu duplici on the anniversary of his death.

For the earlier lives by Bosio, John of Salisbury, Bernhard Guidonis, and Amalricus Augusti see Muratori, SJ, Rerum Italicarum Scriptores, ed. Hefele, Conciliorum, V. 194; his letters are in P. L. CLXXX, 1009 sqq. (Jaffé, II. 20 sqq.). See also Sativi Vita del santo Eugenio III. Morura, 1827. Annali Holland, (1890). X. 155; and histories of the city of Rome by Von Reumont and Gregorovius.

James F. Loughlin.

Eugene IV (Gabriele Condulmaro, or Condulmerio), b. at Venice, 1383; elected 4 March, 1431; d. at Rome, 23 Feb., 1447. He sprang from a wealthy Venetian family and was a nephew, on the mother's side, of Gregory XII. His personal presence was princely and imposing. He was tall, thin, with a remarkable agility. Concerning the acquisition of great wealth, he distributed 20,000 ducats to the poor and, turning his back upon the world, entered the Augustinian monastery of St. George in his native city. At the age of twenty-four he was appointed by his uncle Bishop of Siena; but since the people of that city objected to the rule of a foreigner, he resigned the bishopric and, in 1408, was created Cardinal-Priest of St. Clement. He rendered signal service to Pope Martin V by his labours as legate in Piacenza (March of Ancona) and later by quelling a sedition of the Bolognesi. In recognition of his labours, he was elected at the church of the Minerva after the death of Martin V, elected Cardinal Condulmaro to the papacy on the first scrutiny. He assumed the name of Eugene IV, possibly anticipating a stormy pontificate similar to that of Eugene III. Stormy, in fact, his reign was destined to be, and it cannot be denied that many of his troubles were owing to his own want of tact, which alienated all parties from him. By the terms of the capitulation which he signed before election and afterwards confirmed by a Bull, Eugene secured to the cardinals one-half of all the revenues of the Church, and promised to consult with them on all questions of importance relating to the spiritual and temporal concerns of the Church and the Papal States. He was crowned at St. Peter's, 11 March, 1431. The Pope spent three years throughout his simple routine of monastic life and gave great edification by his regularity and unfeigned piety. But his hatred of nepotism, the solitary defect of his great predecessor, led him into a fierce and sanguinary conflict with the house of Colonna, which would have resulted disastrously for the pope, had not Florence, Venice, and Naples come to his aid. A peace was patched up by virtue of which the Colonnese surrendered their castles and paid an indemnity of 75,000 ducats. Scurrely was this danger averted when Eugene became involved in a far more serious struggle, destined to trouble his entire pontificate. Martin V had convoked the Council of Basle (q. v.) which opened with scant attendance 28 July, 1431. The Pope during his absence at the council, Eugene issued a Bull, a Bull dated 18 Dec., 1431, dissolved it, to meet eighteen months later in Bologna. There is no doubt that this exercise of the papal prerogative would sooner or later have become imperative; but it seems unwise to have resorted to it before the council had taken any overt steps in the wrong direction. It alarmed public opinion, and gave colour to the charge that the Curia was opposed to any measures of reform. The preliminaries at Basle refused to separate, and issued an encyclical to all the faithful in which they proclaimed their determination to continue their labours. In this course they had the assurance of support from all the secular powers, and on 15 Feb., 1432, they reasserted the Gallican doctrine of the superiority of the council to the pope (see Constant, Council of). All efforts to induce Eugene to recall his Bull of dissolution having failed, the council, on 29 April, formally summoned the pope and his cardinals to appear at Basle within three months, or to be punished for contumacy. The schism which now seemed inevitable was for the time averted by the exertions of Sigismund, who had come to Rome to receive the imperial crown, 31 May, 1433. The pope recalled the Bull and acknowledged the council as canonical, 13 Dec., 1433.

In the following May, 1434, a revolution, fomented by the pope's enemies, broke out in Rome. Eugene, in the garb of a monk, and pelted with stones, escaped down the Tiber to Ostia, whence the friendly Florentines conducted him to their city and received him with an ovation. He took up his residence in the Dominican convent of Santa Maria Novella, and sent Viteleschi, the militant Bishop of Recanati, to restore order in the States of the Church.

The prolonged sojourn of the Roman Court in Florence, then the centre of the literary activity of the age, gave a strong impetus to the Humanistic movement. During his stay in the Tuscan capital, Eugene consecrated the beautiful cathedral, just then finished by Brunelleschi. Meanwhile, the rupture between the Holy See and the revolutionists at Basle, now completely controlled by the radical party under the leadership of Cardinal d'Allemont, of Arles, became complete. This time our sympathies are entirely on the side of the pontiff, for the proceedings of the little coterie which assumed the name and authority of a general council were utterly subversive of the Divine constitution of the Church. By abolishing all sources of papal revenue and restricting in every way the papal prerogative, they sought to reduce the head of the Church to a mere shadow. Eugene answered with a dignified appeal to the European powers. The struggle came to a crisis in the matter of the negotiations for union with the Greeks. The majority at Basle were in favour of holding a council in France or Savoy. But geography was against them. Italy was much more convenient for the Greeks; and they declared for the pope. This so provoked the radical party at Basle that on 3 July, 1437, they issued a monition against Eugene, heaping all sorts of accusations upon him. In reply the pope published (18 Sept.) a Bull in which he transferred the council to Ferrara. Though the council declared the Bull invalid, and threatened the pope with deposition, yet the Bull dealt a deadly blow to the adversaries of papal supremacy. The better disposed leaders, notably Cardinals Cesarini and Cass, left them and repaired to Ferrara, where the council convened by Eugene opened, 8 Jan., 1438, under the presidency of Cardinal Albergati.
The deliberations with the Greeks lasted for over a year, and were concluded at Florence, 5 July, 1439, by the Decree of Union. Though the union was not permanent, it vastly enhanced the prestige of the papacy.

The union with the Greeks was followed by that of the Armenians, 22 Nov., 1442, the Convivium, 1447, and the Nestorians, 1445. Eugene exerted himself to the utmost in rousing the nations of Europe to resist the advance of the Turks. A powerful army was formed in Hungary, and a fleet was despatched to the Hellespont.

The first successes of the Christians were followed, in 1444, by the crushing defeat at Varna. In the mean time, the dwindling conventicle at Basle succeeded on the death of their reformer, Felix van一直没有Eugene was pronounced suspended, and this step was followed by his deposition on 25 June, 1439, on the charge of heretical conduct towards a general council.

To crown their infamy, the secessors, now reduced to one cardinal and eleven bishops, elected an anti-pope, Duke Amadeus of Savoy, as Felix V. But Christendom, having recently experienced the horrors of a schism, repudiated the revolutionary step, and, before his death, Eugene had the happiness of seeing the entire Christian world, at least in theory, obedient to the Holy See. The decrees of Florence have since been the solid basis of the spiritual authority of the papacy.

Eugene secured his position in Italy by a treaty, 6 July, 1443, with Alfonso of Aragon, whom he confirmed as monarch of Naples, and after an exile of nearly ten years he made a triumphant entry into Rome, on 29 Sept., 1443. He devoted his remaining years to the amelioration of the sad condition of Rome, and to the consolidation of his spiritual authority among the nations of Europe. He was unsuccessful, however, in the French effort to secure the anti-papal Pragmatic Sanction of Bourges (7 July, 1438), but, by prudent compromises and the skill of Æneas Silvius, he gained a marked success in Germany. On the eve of his death he signed (5, 7 Feb., 1447) with the German nation the so-called Frankfort, or Princes', Concordat, a series of four Bulls, in which, after long hesitancy and against the advice of many cardinals, he recognized, not without diplomatic reserve, the persistent German contentions for a new council in a German city, the mandatory decree of Constance (Frequens) on the frequency of such councils, also its authority (and that of other general councils), but after the manner of his predecessors, from whom he declared that he did not intend to derive a hint of principle or doctrine from the so-called 'Bulla Salvatoris', in which he asserted that notwithstanding these concessions, made in his last illness when unable to examine them with more care, he did not intend to do aught contrary to the teachings of the Fathers, or the rights and authority of the Apostolic See (Hengstenroth-Kirsch, II, 941-2).

EUGENII II (THE YOUNGER), Archbishop of Toledo from 617 to 13 Nov., 657, the date of his death. He was the son of a Goth named Euantius, became a cleric in the cathedral of Toledo, and at the death of Eugenius I was elected his successor. The office was so little to his taste that he fled to Saragossa to lead a monastic life, but was forced to return to Toledo by King Chindaswinth and take up the government of the city. Though of small stature and deformed, he was a zealous prelate. He undertook the reform of the ecclesiastical chant of the Divine Office and achieved distinction as a writer of prose and poetry. His style is natural and clear, and his exposition easy and agreeable. His poems, though lacking polish and elegance, are full of fire, spirit, and poetical movement. Piety breathes throughout, and the orthodoxy of his faith is not in question. His thought is solid, firm and gives evidence of a well-trained mind. His feast is kept on 13 November.

Eugeneus II left two books in prose and verse, published (Paris, 1619) by Father Sirmond, S.J., containing his poems on religious and secular subjects, his recension of the poem of Dacontius on 'The Six Days of Creation' (Hexameron), to which he added a 'Seventh Day', and a letter to King Chindaswinth explaining the plan of the entire work; he also edited the metrical 'Satisfactio' of Dacontius, an account of the writer's misfortunes. Of this work Bardenhewer says (Patrology, tr. St. Louis, 1908, p. 619) that it "underwent a substantial revision at the hands of Eugeneus II, Bishop of Toledo, in keeping with the wish of the poet Chindaswinth. Eugeneus abandons the metrical for the poetical form and the theology of the poem affected by this treatment, but probably also its political sentiments. It is this revision that was usually printed as Dacontii Elegia (Migne, P.L., LXXXVII, 383-88), until the edition of Arevalo (Rome, 1791, 362-402, and 901-32) made known the original text". He also wrote a treatise on the Trinity probably against the Arian Visigoths. Ferrera mentions a letter of Eugeneus to the king and one to Protaesium, the Metropolitan of Tarracon, promising if possible to write a mass of St. Hippolytus and some festal sermons, but disclaiming the ability to equal his former productions.

MARK J. MCEAUL.

Eugenius of Carthage, Saint, unanimously elected Bishop of Carthage in 480 to succeed Deogratias (d. 450); d. 13 July, 505. The election was deferred owing to the opposition of the Arian Vandal kings and was only permitted by Huneric at the instance of Zeno and Fthidius, into whose family the canons had married. The bishop's wise government for charity to the poor, austerity of life, and courage under persecution, won the admiration of the Arians. In his uncompromising defence of the Divinity of the
Word he was imitated by the members of his flock, many of whom were exiled with him, after he had admitted Vandals into the Catholic Church, contrary to royal edict, and had worsted in argument Arian theologians whom the king pitted against the Catholics. Both sides claimed the name of "Catholic"; the Arians calling their opponents "Homousians". The conference was held some time between 318 and February, 484, and ended by the withdrawal of the chief Arian bishop on the plea that he could not speak Latin. The Arians being enraged, Huneric persecuted the Catholics, exiling forty-six bishops to Corsica, and three hundred and twenty. The Arian bishop of Barcelona, the latter was Eugenius, who under the custody of a rufian named Antonius dwell in the desert of Tripoli. On setting out he wrote a letter of consolation and exhortation to the faithful of Carthage which is still extant in the works of Gregory of Tours (P. L., LVII, 769-71). Gunthamund, who succeeded Huneric allowed Eugenius to return to Carthage and permitted him to reopen the churches. After eight years of peace Thrasamund succeeded to the throne, revived the persecution, arrested Eugenius, and condemned him to death, but commuted the sentence into exile at Vienne, near Abi (Languedoc), where the Arian Alaric was king. Eugenius built here a monastery over the tomb of St. Amaranthus, the martyr, and led a penitential life. He is said to have miraculously cured a man who was blind. He wrote: "Expositio Fidei Catholicæ", demanded of him by Huneric, probably the one submitted by the Catholic bishops at the conference. It proves the con- substantiality of the Word and Divinity of the Holy Ghost. He wrote also an "Apologiae pro Fide"; "Altercatio cum Arianis", fragments of which are quoted by Lactantius, and also please for the Catholics addressed to Huneric or his successors. His letter to the faithful of Carthage has been mentioned above.

MARK J. MCNEAL.

Eugippius. See Severinus, Saint.

Eulalia of Barcelona, Saint, a Spanish martyr in the persecution of Diocletian (12 Feb., 304), patron of the cathedral and city of Barcelona, also of sailors. The Acts of her life and martyrdom were copied early in the twentieth century, and with various differences, by the learned ecclesiast Gracianus Mattiace (Bol. acad. hist., Madrid, 1902, XLI, 253-55). Their chief historical source is a Latin hymn of the middle of the seventh century by Quiricus, Bishop of Barcelona, friend and correspondent of St. Ildophonous of Toledo and of Tajo, Bishop of Saragossa. This hymn, identical with that of Prudentius (Peristerophanum, 111) for the feast of St. Eulalia of Merida (10 Dec., 304), was preserved in the Visigothic Church and has reached us through the Mozarabic Liturgy.

There is no reason to doubt the existence of two distinct saints of this name, despite the over-hasty and hypercritical doubts of some. The aforesaid Quiricus of Barcelona and Oroncins of Merida were present at the tenth council of Toledo (656). The latter had already formed (651) a convent of nuns close by the basilica of the celebrated martyr of his episcopal city, had written a rule for its guidance, and given it for a house the noble lady Eugenia. Quiricus now did as much for the basilica and sepulchre of the martyr of Barcelona, close to whom he wished to be buried, as we read in the last lines of the hymn. The inscriptions on many Vandal coins show that they contain names of St. Eulalia; except in the context, however, they do not distinguish between the martyrs of Barcelona and the one of Merida. On an altar in the village of Morera, Province of Badajos, we find enrated consecutively Sts. Fructuosus and Augurius (Tarragona), St. Eulalia (Barcelona), St. Baudulii (Nimes), and St. Paulus (Narbonne). The Visigothic archaology of Eastern Spain has been hitherto poor in logigraphic remains; nevertheless, the inscription found by Emile Béziers mentions a basilica dedicated to the martyrs Sts. Vincentius, Ites, and Eulalia (of Barcelona). Until 23 Nov., 871, the body of the Barcelona martyr reposed outside the walls of the city in the church of Santa Maria del Mar. On that date both the body and the tomb were transferred to his cathedral by Bishop Frodonius. In memory of this event he set up an inscription yet preserved in the MuSeo Provincial de Barcelona (no. 564); see also volume XX of Flores, "España Sagrada", for a reproduction of the same. Not long before this the martyr, St. Eulogius, having occasion to defend the martyrs of Cordova for their spontaneous confession of the Christian Faith before the Musulman magistrates, quoted the example of St. Eulalia of Barcelona, and appealed to the ancient Acts of her martyrdom. Her distinct personality is also confirmed by the existence of an ancient church and monastery in Cordova that bear the name of the Barcelona martyr; this important evidence is borne out by the Mozarabic calendars examined by the learned Dom Feretin (below).

F. FITA.

Eulalia, Anti-pope. See Boniface I.

Eulogius (Greek εὐλογή, "a blessing").—The term has been applied in ecclesiastical usage to the object blessed. It was occasionally used in early times to signify the Holy Eucharist, and in this sense is especially frequent in the writings of St. Cyril of Alexandria. The origin of this use is doubtless to be found in the words of St. Paul (1 Cor., x, 16): τὸ ποτήριον τῆς εὐλογίας ὑμῶν. But the more general use is for such objects as bread, wine, etc., which it was customary to distribute after the celebration of the Divine Mysteries. Bread so blessed, we learn from St. Augustine (Letter cxcvii, 40), was distributed consecutively and regularly distributed in his time to catechumens, and he even gives it the name of sacramentum, as having received the formal blessing of the Church: "Quod aecerperunt catechumi, quamvis non sit corpus Christi, sanctum tamen est, et sanctius quam cibi quibus alimentum, quoniam sacramentum est" (What the catechumens receive, though it is not the Body of Christ, is holy—indeed, rather than our ordinary food, since it is a sacrament). For the extension of this custom in later ages, see Antidoron; Bread, Litur- gical Use of.

The word eulogia has a special use in connexion with monastic life. In the Benedictine Rule monks are forbidden to receive "litteras, eulogias, vel quolibet manuscriptula" without the abbot's leave. The word (and its corresponding noun) have been used in the sense of blessed bread only, but it seems to have a wider signification, and to designate any kind of present. There was a custom in monasteries of distributing in the refectories, after Mass, the eulogia of bread blessed at the Mass.

ARTHUR S. BARNES.

Eulogius of Alexandria, Saint, patriarch of that see from 500 to 607. He was a successful combatant of the heretical errors then current in Egypt, notably the various phases of Monophysitism. He was a
EUMENIA

Eulogius of Cordova, Saint, Spanish martyr and writer who flourished during the reigns of the Cordovan Caliphs, Abd-er-Rahman II and Mohammed I (822–886). It is not certain on what date or in what year of the ninth century he was born; it must have been previous to 819, because in 848 he was a priest highly esteemed among the Christians of Cordova and beyond. His piety was then conferred only on men thirty years of age. The family of the saint was of the nobility and held property in Cordova from Roman times. The Mussulman rulers of Spain, at the beginning of the eighth century, tolerated the creed of the Christians and left them, with some restrictions, their civil rule, ecclesiastical hierarchy, monasteries, and property, but made them feel the burden of subjection in the shape of pecuniary exactions and military service. In the large cities like Toledo and Cordova, the civil rule of the Christians did not differ from that of the Visigothic epoch. The government was exercised by the consules (counts), president of the council of senators, among whom we meet a similarly named ancestor of a famous Eulogius, and fifty of his brothers, received an excellent education in accord with his good birth and under the guardianship of his mother Isabel. The youngest of the brothers, Joseph, held a high office in the palace of Abd-er-Rahman II; two other brothers, Alvarus and Isidoro, were merchants and traded on a large scale as far as Central Europe. Of his sisters, Niola and Ana, the latter was married by him with her mother; the second was educated from infancy in a monastery where she later became a nun.

After completing his studies in the monastery of St. Zoilus, Eulogius continued to live with his family the better to care for his mother; also, perhaps, to study with famous masters, one of whom was Abbot Speainides, an illustrious writer of the middle of the ninth century. He was a close friend of the celebrated Alvarus Paulus, a fellow-student, and they cultivated together all branches of science, sacred and profane, within their reach. Their correspondence in prose and verse filled volumes; later they agreed to destroy it as too exuberant and lacking in polish. Alvarus married, but Eulogius preferred the ecclesiastical career and was ordained a priest by Bishop Recared of Cordova. Alvarus has left us a portrait of his friend: "Devoted," he says, "from his infancy to the Scriptures, and growing daily in the practice of virtue, he quickly reached perfection, surpassed in knowledge all his contemporaries, and became the teacher even of his masters. Mature in intelligence, though in body a child, he excelled them all in science even more than they surpassed him in years. Fair in feature [carus vulnus], honest and honourable, he moved by his eloquence, and yet more by his works. What books escaped his avidity for reading? What works of Catholic writers, of heretics and Gentiles, chiefly philosophers? Poets, historians, rare writings, all kinds of books, especially sacred hymns, in the composition of which he was a master, were read and digested by him; his humility was one of the least remarkable and he readily yielded to the judgment of others less learned than himself." This humility shone particularly on two occasions. In his youth he had decided to make a foot pilgrimage to Rome; notwithstanding his great fervour and his devotion to the sepulchre of the Prince of the Apostles (a notable proof of the union of the Mozarabic Church with the Holy See), he gave up his project, yielding to the advice of prudent friends. Again, during the Saracen persecution in 850, after reading a passage of the works of St. Epiphanius he decided to refrain for a time from saying Mass that he might better defend the cause of the martyrs; however, at the request of his bishop, Saul of Cordova, he put aside his scruples. His extant writings prove that he has not over-exaggerated. They give an account of what is most important from 848 to 859 in Spanish Christianity, both without and within the Mussulman dominions, especially of the lives of the martyrs who suffered during the Saracen persecution, quorum pars ipse magna fuit. He was elected Archbishop of Toledo shortly before he was beheaded (11 March, 850). He left a collection of his stories, in which he defended, the intellectual culture which he propagated, the imprisonment and sufferings which he endured; in a word, his writings show that he followed to the letter the exhortation of St. Paul: Imitatores mei estote siueet et ego Christi. He is buried in the cathedral of Oviedo.

EUMENIA

Eumenia, a titular see of Phrygia in Asiana, in Asia Minor and suffragan to Hierapolis. It was founded by Attalus II Philadelphus (159–138 B.C.) at the sources of the Cherus and near the Glauceus, on the site of the modern Iskelti, the centre of a niahé in the vilayet of Brusa (1000 inhabitants). The new city was named by its founder after his brother Eumenes. Numerous inscriptions and many coins remain to show that Eumenia was a well-peopled place under Roman rule. On its coins it boasts of its Achaean origin. The spread of Christianity is, however, the most interesting fact in its history. As early as the third century its population was in great part Christian, and it seems to have suffered much during the persecution of Diocletian. Its bishop and martyr, St. Thrasaeus (Euseb. II, IV, 19), belonged to the middle of the fourth century, etc. Another bishop. Metrodon, known by an inscription, lived probably soon after Emperor Constantine. Four other bishops are known by their subscriptions to proceedings of councils—Theodore in 361, Leo in 787, Paul and Epiphanius in 789 (Lequien, Orienschristi., I, 507). The see is mentioned in the "Notitiae episcopatuum" as late as the twelfth or thirteenth centuries.

S. Pétrides.
Eunomianism, a phase of extreme Arianism prevalent amongst a section of Eastern churchmen from about 350 to 369. A sect of Antiacho, exiled by Jul. to Persia in the middle of the fifth century. The teaching of Arian was condemned by the Council of Nicea, and the word homousian adopted as the touchstone of orthodoxy. The subsequent history of the Arian heresy is the history of the endeavours of Arians to discredit the formulation of the Orthodox, and the Arians. Imperial influence had been all-powerful too long in the official religion to allow imperial ingerence in church affairs to cease with the imperial change of attitude towards Christianity. That influence was exercised through the court prelates tinged with the fundamental rationalism underlying Arianism. They skillfully avoided the real issue, represented the whole affair as merely a question of the propriety of using particular terms, and for a time deluded those who were unfamiliar with the metaphysics of the question. St. Athanasius was represented as a political fire-brand whose watchword was homousion. The Emperor Constantius (337–361), to his great personal annoyance, was obliged to allow Athanasius to return from his second exilis (339–346). The null which seemed to follow the return of Athanasius was due to the political circumstances arising out of the disastrous Persian War and the civil war against Maxentius; and it was not until the victory of Mount Selenus (13 Aug., 353) that the emperor's hands were freed.

I shall describe a new and more defiant Arian school was arising, impatient of diplomacy, and less pliant to imperial dictation. It frankly returned to the fullest expression of the errors of Aria, and sought to defend it on the rationalizing basis of Aristotelian dialectics. The history of the new school coincides with the life-history of Aetius and Eunomius, Aetius, its founder, successively a goldsmith, physician, and Grammarian. He turned his attention to theology under Arian influence at Antiacho and Alexandria. Aristotle's categories henceforth formed the limits of his knowledge, and the abuse of the syllogism his principal weapon. Ordained deacon at Antiacho in 350, he was deposed by Joscius and sought refuge at Alexandria, where he found a disciple in Eunomius. Radical and unanswerable to the orthodox, he asserted that in substance and in all else the Son is unlike the Father: διόποιον, "unlike", became their watchword as against the ὑμοῦσιον (homousion) of the Orthodox, the ὑμοῦσια (homousia) of the Semi-Arians, and the later ὑμοῖος (homoios) of the Aecenians. Hence the Arian extremists became known as Aetians, and later as Eunomians and Anomceans. Their doctrines were received favourably by Eudoxius of Antiacho and the Synod of Antiacho in 355; but the formulation of their tenets produced a reaction, and in the same year they were condemned by the Semi-Arians at Ancyra and at the Third Synod of Sirmium, and the leaders were exiled for a short time to Pepuza. They reappeared, however, at the Semi-Arian Synod of Lystra in 360, to which they were invited. They rejected the διοποιον and the triumph of the Huminians led to the exile of Eudoxius to Mopsuestia in Glizia and later to Ambula in Psidia. After 360 the Anomceans were to be forthcoming. Julian the Apostate (361–363) allowed Aetius to return; he was rehabilitated in an Arian synod, and died c. 370. Meanwhile Eunomius, supported by his friend Eudoxius, transferred from Antiacho to Constantinople (Jan., 360), became Bishop of the Orthodox See of Cyzicus in Myssia. His flock appealed to Constantius, who obliged Eudoxius to take action against him. Deposed in his absence and banished, Eunomius founded a sect of his own, ordained and consecrated some of his followers. Julian recalled both Aetius and Eunomius, who acquired considerable importance in Constantinople. The Synod of Antiacho, 362, explicitly set forth the Arianism of the Father in the Son, and Arianism as "the other substance". The death of Eudoxius in 370 marks the beginning of the end of Eunomianism. The sects were excluded from the benefit of Gratian's edict of toleration (end of 378), they were directly condemned by the Council of Constantinople (381), and were the objects of special repressive measures in addition to the judicial action of the church in general. Moreover, disruptive forces were at work within the sect. Eunomius died about 395, and for all practical purposes the sect may be said to have died with him.

The dogmatic system of Eunomius is characterized at once by its presumptuous dialectics and its shallowness. His errors concerning Christ are founded upon his erroneous theodicy, which involves the asser- tion that a God of simplicity cannot be a God of mystery at all, for even man is as competent as God to comprehend simplicity. Eunomius proclaims the absolute intelligibility of the Divine Essence: "God knows no more of His own substance, than we do; nor is this more known to Him, and less to us: but wherewith we are acquainted, that is precisely is known to God; on the other hand, whatever He knows, the same also you will find without any difference in us" (Socrates, Hist. Eccl., IV. viii). Αγενησία, he maintains, perfectly expresses the Divine Essence: as the Unbegotten, God is an absolutely simple being: an act of generation would involve an contradiction, for God is not the same as the Godhead. He is δενένσιον, the Son δενενσιος; hence, held, there must be diversity of substance. The general line of his philosophical reasoning against the Orthodox was as follows: You allow δενενσια to be a Divine attribute. Now the simplicity of God excludes all multiplicity of attributes. Consequently δενενσια is the only attribute which befits the Divine Essence: the Son is not essential to Him. In other words, God is essentially incapable of being begotten. Hence it is folly to speak of a God begotten, of a Son of God. The one God, δενενσιος and δενενσιος, unbegotten and without beginning, could not communicate His own substance, nor beget even a consubstantial Son; consequently there must be a non-substantial Son δενενσιος or of likeness of substance (homoioumioi) between the Father and the Son. There could be no essential resemblance (κατ' ουδια), but at most a moral resemblance. For the Son is a being drawn forth from nothing by the will of the Father, yet superior to all Creation insomuch as He alone was created by the One God to be the Creator of the world. He does not share in the communicable Divine Essence (ουσια), but he does partake in the communicable Divine creative power (ενεργεια), and it is that partaking which constitutes the Son's Divinity and establishes Him, as regards erection, in the position of Creator: and as the principle of paternity in God is not the ουσια but the ενεργεια, the sense in which the term 'Son' here could be used is clear.

The works of Eunomius are more interesting in themselves than in the fact that they called forth the best efforts of St. Basil and St. Gregory of Nyssa. His Commentary on the Romans and his letters have perished. His "Apologiticus" (P. G. XXX. 535), written before 365, seeks to refute the Nicene teaching concerning the coeternal and consubstantial Divinity of the Son and its generation from the Father. It is extremely obscure, and has been frequently misunderstood. For example, Tillemont, VI, 501–516, needs careful checking. It was against this work of Eunomius that St. Basil wrote his "Adversus Eunomium" (Αντιτομανίου) in five books. (It is clear, however, that books IV and V are from another pen.) Eunomius retorted with his Αντωναία
Edward Myers.

Euphrasia, Mother Superior Sisters of Charity. See Blenkinsop, Peter.

Euphemiæ, See Messalians.

Euphemius of Constantinople (490–496) succeeded as patriarch of Flavitas (or Fravitas, 489–490), who succeeded Acacius (471–489). The great Acacian schism (481–519), therefore, lasted during his reign. The Emperor Zeno (474–491) had published a decree called the "Hieronikon" in 482, which was an act of theological discussion on certain other criteria but that of Nicea-Constantinople (ignoring the decrees of Chalcedon), carefully avoided speaking of Christ's two natures, and used ambiguous formulas that were meant to conciliate the Monophysites. The "Hieronikon" really satisfied no one. Consistent Monophysites disliked it as much as Catholics. But Acacius as exarch of Alexandria and Peter Fullo (Guaphes) of Antioch, signed it. Pope Felix III (or II, 483–492) in a Roman synod of sixty-seven bishops (484) condemned the emperor's decree, deposed and excommunicated Acacius, Peter Mongus, and Peter Fullo. Acacius returned by striking the pope's name from his diplomas and persecuted Catholics at Constantinople. When he died, Paulus, bishop of Flavitas, his successor, applied for recognition at Rome, but in vain, since he would not give up communion with Peter Mongus. Euphemiæ recognized the Council of Chalcedon, restored the pope's name to his diplomas, and broke with Peter Mongus, who died in the year of Euphemiæ's accession (490). He was therefore a well-meaning person who wanted to restore the union with the Holy See. Unfortunately he still refused to cease the names of his predecessors (Acacius and Flavitas) from the diplomas, where they occurred among the faithful departed. The pope insisted that heretics and favourers of heresy should not be prayed for publicly in the Liturgy; so during the reign of Euphemius the union he desired was not brought about. But Euphemius was always a Catholic at heart. Before the accession of the Emperor Anastasius I (491–518) he had made him sign a Catholic profession of faith (Evagrius, H. E., III, xxiii). After the death of Pope Felix, Euphemiæ wrote to his successor, Gelasius I (492–496), again asking for intercommunion on any terms but the condemnation of Acacius. This time, too, the pope refused to modify his condition (Gelasii Epist. et Decret., P. L., LXXIII, 13). The patriarch had already summoned a synod at Constantinople in which he confirmed the decrees of Chalcedon (Mansi, VII, 1180). Eventually he fell foul of the emperor. A war against the Bulgars and Slavs was then going on, and Euphemius was accused of treason by revealing the emperor's plans to his enemies. A soldier tried, unsuccessfully, to murder the patriarch, apparently by order of Anastasius. The emperor further wanted to have back his written profession of faith, which Euphemiæ refused to give up. So he was deposed (496) in spite of the resistance of the people, and Macedonius II (496–511) was appointed successor. Macedonius seems to have been unwilling to take his place and refused to wear patriarchal vestments in his presence. Euphemiæ was exiled to Asia Minor and died in 515 at Ancyra. He was recognized to the end as lawful patriarch by Catholics in the East (Elias of Jerusalem, Flavian of Antioch, etc.).

Euphrasia, or Eupraxis, Saint, Virgin, b. in 380; d. after 410. She was the daughter of Antigonus, a senator of Constantinople, and a relation of Emperor Theodosius. Her father died shortly after her birth, and her mother, also Euphemiæ, devoted her life thenceforth exclusively to the service of God. To carry out this ideal she abandoned the capital, and, with her seven-year-old daughter, repaired to Egypt, where she dwelt on one of her estates, near a convent, and adopted the nun's austere mode of life. This example aroused in her daughter the desire to enter the convent, and her mother gave her into the care of the superior, that she might be trained in the ascetic life. After her mother's death she declined an offer of marriage made, by the Emperor Theodosius, on behalf of a senator's son, transferred to the emperor her entire fortune, to be used for charitable purposes, and took up, with a holy ardour, the rigorous practices of Christian perfection. She died after a longsuffering. Her feast is celebrated in the Greek Church on 25 July, and in the Latin Church on 13 March. She is mentioned by St. John Damascene, in his third "Oration de imaginibus". Vita Patrum (ed. Roswey) in P. L., LXXIII, 623–642; Acta SS., March, II, 260–271; 472–475. J. P. Kirsch.

Euphrates. See Paraeus.

Euphrosyne, Saint, d. about 470. Her story belongs to that group of legends which relate how Christian virgins, in order the more successfully to lead the life of celibacy and ascesisim to which they had dedicated themselves, put on male attire and passed for men. According to the narrative of her life in the "Vita Patrum", Euphrosyne was the only daughter of Paphnutius, a rich man of Alexandria, who desired to marry her to a wealthy youth. But having consecrated her life to God and apparently seeing no other means of keeping this vow, she clothed herself as a man and under the name of Smaragdos gained admittance into a monastery of men near Alexandria, where she lived for thirty-eight years after. She soon attracted so much attention by her ascetic exercises which she made toward a perfect ascetic life, and when Paphnutius appealed to him for comfort in his sorrow, the abbot committed the latter to the care of the alleged young man Smaragdos. The father received from his own daughter, whom he failed to recognize, helpful advice and comforting exhortation. Not until she was dying did she reveal to the youth that she was his daughter. After her death Paphnutius also entered the monastery. Her feast is celebrated in the Greek Church on 25 September, in the Roman Church on 16 January (by the Carmelites on 11 February).

Eurupa, a titular see of Epirus in Greece, sufragian of Nicopolis. Eurupa is mentioned by Hiero-
les (Synesius, 651, 6); Justinian transferred its
inhabitants to an islet in a neighbouring lake and
built there a strong city (Procop., De aedif., IV, 1). We
know five bishops of Eurupa; the first, St. Dona-
tus, lived under Theodosius I, the last is mentioned in
a letter of Pope St. Gregory the Great about 603 (Le-
quien, Or. christi, II, 143). The site of the city is un-
known, and it is east and west of the sea; it is
called Ai Donat (St. Donatus) by the Turks, in
the vilayet of Janina. Others have placed it at Limbioni,
now proved to be Phocaea, others at Janina itself.

Panaghid tites in Néhý两周 Ἤπειρος ἐπικράτεια (Constanti-
nopele, 1892), II, 308; Philosipos in Facetius-Wissowa, Real-
Enzykel., s. v.

S. Pétrides.

Europe.—Name.—The conception of Europe as a distinct division of the earth, separate from Asia
and Africa, had its origin in ancient times. The sailors of the
Ægean Sea applied the Semitic designations Erub
(sunset, west) and Euro (sunset, east) to the countries lying
respectively west and east of the sea; in this way it
became customary to call Greece and Italy back of it Europe,
while Asia Minor and the parts beyond
were named Asia. At a later date the mass of
land lying to the south of the Mediterranean was set
off as a distinct division of the earth with the name of
Libya or Africa.

Position, Boundaries, and Area.—Europe is a large
mass forming the western part of the northern
continent of the Eastern Hemisphere. On the
north and west it is separated from North America by
the Arctic and North Atlantic Oceans; on the south by
the Mediterranean Sea from Africa and Western Asia.
In the east there is no clear natural division from
the continental mass of Asia. Such a dividing line may
be drawn along the crest of the Ural and Mangadzhar
Mountains, the Emba River, Caspian Sea, and the low-
lands of the Maniche River, or through the depression
that, starting from the Gulf of Obi, extends through
the valleys of the Obi, Irtshy, Tobol, and Enba
Rivers. The political boundary extends beyond the
Ural Mountains towards the east, and beyond the
Ural River to the south and west, runs along the range
called Zun Usen Range, and then eloses within the eastern
boundary of Europe the whole of the Caucasus.
The most northerly point of Europe is North Cape (71° 12' N. lat.) on the Island
of Magero belonging to Norway; the most western point is
Cape da Roca (9° 31' west of Greenwich) in Portu-
gal; the most southern is Cape Tarifa (35° 39' 53° N.
lat.) in Spain; the Continent extends as far to the east
as 65° longitude east of Greenwich. Its greatest
length from north to south is 2308 miles, from west
to east 3155 miles. The statement as to the extent of its
area varies, according to the position assigned to its
eastern boundary, from 3,672,969 sq. miles to 4,092,
660 sq. miles. This measurement includes the polar
islands Iceland, Nova Zembla, and Spitzbergen, but
not the Canary, Madeira, and Azores Islands.

Three leading tectonic divisions are to be distinguished in the geological for-
mation of Europe. These appeared in the middle
Tertiary period. Western Europe, as far south as the
Alps, the Pyrenees, and, reaching beyond the Pyre-
nees, into the Spanish Peninsula, to the east as far as
the Baltic and the Vistula River, is formed of debris
and sedimentary deposits. This has been produced
by the breaking up and overflowing with water of
mountain chains that now exist as secondary ranges,
as the Scotch Highlands, the central plateau of France,
and the mountain chain of Central Germany. To-
wards the east is low-lying land that has remained the
same from early times. Sweden and Finland form
}$

EUROPE

south-east from which spreads the great Russian plain,
which is limited by the Ural and Carpathian Moun-
tains on the east and west, and the confluence of the
whole of Southern Europe and a part of Middle Eu-
rope is a region of late folded mountain ranges.
These begin with the Pyrenees, which have remarkable
spurs in the ranges of Provence, in Corsica, and Sar-
dinia. The ranges of Andalusia in Southern Spain
find their continuation in the Atlas range, which bends
to the city west and reaches in Europe in the mountains
of the northern coast of Sicily and the Apennines.
The north-western Apennines pass into the Alpine
system. In the east the Alps are divided into three
chains; of these the middle one passes into the Hun-
grarian plain; the Carpathian and Baltic ranges unite
in a great bend with the northern chain, and the
southern one is continued by the Dinaric Alps and the
western chains of the Balkan Peninsula as far as Greece
and the south-western part of Asia Minor. Numerous
islands belong to the Continent of Europe. The sepa-
ration of the islands from the mainland arose in two
ways. In the north and west, the encroachment of the
sea produced bays and peninsulas and formed islands.
In the south, the western and eastern basins of the
Mediterranean, the Caspian Sea, the Sea of Marmora,
and the southern part of the Black and Caspian Seas,
were formed by folding; and in this way also were formed the
Iberian, Italian, and Balkan Penin-
sulas and the archipelago lying between Greece and Asia Minor. The rivers of
Europe belong to three different basins, namely, to
the Caspian Sea, the Atlantic Ocean, including the
Mediterranean, and the Black and Caspian Seas.
The courses of the rivers of Europe are much shorter
than the courses of those of Asia, Africa, or America.
The largest of the European rivers, the Volga (1758
miles), the Danube (1771 miles), Dnieper (1329 miles),
Don (1120 miles), Petchora (1023 miles), and the
Dniester (835 miles), flow into seas that are almost
totally cut off from the ocean, consequently from the
world's traffic. To offer navigation, and numerous canals are cut
through the main watershed that extends from Gib-
ralter to the northern Urals. The largest number of lakes is found in the region, formerly covered with
glaciers, lying north of 50° N. lat.—Finland, Scandi-
navia, Scotland, and Ireland, and the region of the
Baltic. Besides Lake Ladoga, the largest lake in Europe,
formed in the Alps by folding, in the Balkans by the
breaking in of the surface, and in the Apennine
Peninsula by volcanic outbreaks.

Climate, Flora, Fauna.—The climatic conditions
of Europe are very favourable. Almost the entire
continent, excepting the northern point, belongs to the
temperate zone. At the same time it is much warmer
than other countries in the same latitude, as, for in-
stance, than eastern North America, because along
its western coast flows the Gulf Stream, which leaves
the coast of Florida with a temperature of 68° Fahr.
and raises the normal temperature on the Portuguese
and Spanish coast about 7° 2° Fahr., of the British coast
about 9°-14° Fahr., and of the Norwegian coast
from 14°-18°. In those latitudes, where the high
mountains traversing Europe from north to south,
as is the case with North America, the influence
of the Gulf Stream extends far into the interior of
the mainland. On the borders of the Arctic Ocean
a rigorous climate prevails, summer is shorter, and during
the greater part of the year the temperature is below
freezing. This northern region has polar vegetation;
the rolling plains called sandras are found on the penin-
sulas of Kanin and Kola and at the mouth of the
Petchora. The sub-arctic zone is found south of this
in the Scandinavian Peninsula down to 60° N. lat.;
here the climate of the coast, influenced by the sea,
is milder in winter and cool in summer. The part of Eu-
rope properly included in the temperate zone is divided
The forests of Europe flourish in the temperate zone. In Norway they are composed chiefly of pine; the only deciduous tree found in the highest latitudes is the birch (*Betula pendula*); the mixed forests of pines and deciduous trees are found south of 61° N. lat.; this region is further characterized by grass-lands, heaths, and moors. Divided in latitude as it is, and Western Europe is about sixty to seventy percent, is divided into farm land, cultivated forest land, grass and pasture land. From north to south the succession of grains is as follows: barley, rye and oats, wheat, especially in France and Hungary, and maize. Potatoes are cultivated on less fruitful soil. In this region native fruits are the apple, pear, cherry, almond, grape, peach, apricot, plum, and nut trees, the walnut and almond, have been introduced from the south. In this region the grape is also cultivated; its northern limit, extending from the mouth of the Loire, passes to Paris and the Rhine near Bön, then towards the Unstrut and Saale Rivers, and reaches its most northerly point on the Oder between 54° N. lat., the limit of its cultivation here, turns to the southeast until it reaches the Sea of Azov. The region of the Mediterranean, that is the Iberian Peninsula, Provence, Italy to the foot of the Alps, and the Balkan Peninsula south of 42° N. lat., has a sub-tropical climate. Here flourish trees and bushes which are always green; among those that are cultivated for this or for luxury, with a completely inhospitable climate, the French, Walloons, Italians, Frisians, natives of the Rhetian Alps, Maltese, Spaniards, Portuguese, and Rumanians, in all 108,100,000 or 27.1 per cent; included in the Slavonic are: the Russians, Ruthenians, Poles, Czechs, Slovaks, Wends, Slovenes, Croats, Serbs, Bulgarians, Letts, and Lithuanians, in all 121,600,000, or 31.3 per cent. A smaller number, about 9,500,000 souls or 2.4 per cent is composed of other Aryan races: Celts, Greeks, Albanians, Gypsies, Armenians, etc. There are also about 27,900,000, and some 7 per cent, of non-Aryan races: Basques, Magyars, Finns, the tribes of the Ural region, Turks, Kal- mucks, and Jews. The total population of Europe amounts to about 420,000,000.

The organization of the present States of Europe may be traced back to the Middle Ages. Most of the States are limited by natural boundaries within which each has developed its own individual character. The States vary greatly in size and population; most of them are constitutional monarchies, the only republics being France and Switzerland. The British Isles, united as Great Britain and Ireland, have a total area of 121,622 sq. miles and 43,722,000 inhabitants; as a natural consequence of the geographical position of the islands, the nation is largely interested in colonial enterprises. The Scandinavian Peninsula is hallowed by an uninhabited mountain range, thus permitting the existence of two countries, Norway and Sweden. Norway, lying on the Atlantic, has an area of 123,938 sq. miles and 2,500,000 inhabitants; Sweden, on the Baltic, has an area of 172,973 sq. miles and 5,261,000 inhabitants. The peninsula by and large is about 2,000 miles wide. Sweden form the third Scandinavian state, Denmark, that controls the entrance to the Baltic. Denmark has an area of 14,672 sq. miles and 2,450,000 inhabitants. France, the western part of the continental mass, has an area of 200,950 sq. miles and a population of 39,000,000; it has the advantage, excepting towards the north-east, of having for its boundaries either the sea or sea-land. Northern Italy, France, and Central Europe lie the so-called "buffer" States: Belgium with an area of 11,197 sq. miles and 7,075,000 inhabitants; the Netherlands, area 12,741 sq. miles, inhabitants 5,510,000; Switzerland, area 15,830 sq. miles, inhabitants 3,425,000. The German Empire, area 208,850 sq. miles, inhabitants 60,005,000, covers the greater part of Central and Eastern Europe has a population upon nearly all the great powers of Europe and has, therefore, developed a large army. The State having the least organic union geographically and ethnographically, and consequently in constant danger of internal disorganization, is the Austro-Hungarian Monarchy. Its area is 261,004 sq. miles, population 40,922,000 souls. Russia, area 2,051,079 sq. miles, inhabitants 111,500,000, is the largest country in Europe and, in its largest extent, stretches beyond Europe into the Asiatic plain. Southern Europe embraces numerous states with sharply defined boundaries. The Iberian Peninsula is divided between Portugal and Spain; Portugal, a country lying on the ocean and having a great maritime past, has an area of 5,831 sq. miles, inhabitants 7,070,000; it has a population of 191,892 sq. miles, inhabitants 18,249,000. Italy belongs completely to the lands of the Mediterranean; its area is 110,811 sq. miles, population 33,604,000. The physical contour of the Balkan Peninsula is so broken up by mountain ranges that it fails to show any one organically large State. Its divisions at the present time are: Bulgaria, 37,668 sq. miles, population 3,774,400; Montenegro, 8475 sq. miles, population 228,000; Rumunia, 50,579 sq. miles, population 6,392,000; Servia, 18,533 sq. miles, population 2,677,000; European Turkey, 65,251 sq. miles, population 6,130,000; Greece, 25,000 sq. miles, population 2,440,000. By far the greater proportion of the inhabitants of Europe belong to the Christian Faith. One-fourth of the population belong to the Orthodox Churches, fourth belong to the Oriental Christian Churches, nearly 45 per cent are Catholics, 41 per cent are non-Christians. In the Roman States 99 per cent of the population are Catholic; in the Teutonic States 74 per cent are Protestant and less than one per cent non-Christian. In the States of Eastern Europe, Austria-Hungary, Russia, and the Balkan provinces, 52 per cent belong to the Oriental Churches, 92 per cent are non-Christian, 6 per cent are Protestant, and 27 per cent are Catholic. The only heathen are the Kal- mucks living between the Ural and Caucasus mountains, the Finns of the Volga, and the Samoyedes. About 8,250,000 persons or 21 per cent of the whole population of Europe are Mohammedans in belief; these are limited to several tribes of the Uralo-Altaic.
family in Russia, and to the former territories of the Ottoman Empire; among the Mohammedans are a large portion of the Albanians, some of the Serbs in Bosnia and Herzegovina, and a part of the Bulgarians. The Jews of Europe number 9,000,000 or 2-2 per cent; they are largely found chiefly in Russia, in the Austro-Hungarian Monarchy, Rumania, and Turkey. (The above figures are based on Hettner, op. cit. infra.)

Christianity.—European civilization is founded on that of the East; from Asia and Egypt Europe received its food-plants, domestic animals, method of writing, numerals, the beginnings of art and science; and the chief learned men of Europe were educated in the Eastern monasteries and universities. The various States of Greece, the European neighbour of Asia, transmitted these by trade and the foundation of colonies to the countries lying on the shores of the eastern Mediterranean and to Southern Italy. Rome from its central position imparted them to Western and Northern Europe and united the civilized parts of the continent into a great empire. At the time of its greatest extent imperial Rome included, on European soil, the present countries of Italy, Spain, France, England, Germany west of the Rhine and south of the Danube, the countries bordering on the Danube as far as the Black Sea, and the whole Balkan Peninsula, besides all the islands of the Mediterranean. Christianity, too, came from the East by way of Egypt and Syria, and spread from the Atlantic to the Pacific and from the North to the South of Europe. The influence of our Latin race spread in the Roman Empire heretofore, and the spread of the Christian religion determined the fate of the countries in the western part of the empire. In the western part of Europe the time of the great migrations of nations was the time when the Roman state disappeared and the Roman people was submerged and assimilated in the barbarian communities and races that had never before been in contact with the Latin race. The gospel, as it spread among the tribes of the empire, spread the Latin and Greek tongues were most favourable to its spread. When the structure erected by the Caesars fell to pieces, the Christian faith not only entered into its inheritance but was also submerged within all barbarian peoples that had up to then defied the imperial power. The Gospel was brought to Rome by the soldiers of the Roman armies that were stationed with Palestine, their mother country. St. Paul brought Christianity to Greece on his second journey (49-52 A.D.) when he founded, with the aid of Silas, Timothy, and Luke, Christian communities in Philippi, Thessalonica, Berea, Athens, and Corinth. St. Paul's great letters and his journeys to Italy, perhaps also to Spain, prepared the way for the close connexion between the Roman and Greek Christians and strengthened them for the work of spreading the Gospel. In fact the first persecution under Nero in 64 was not able to crush the new movement, and the same is true of the many other later persecutions.

Towards the end of the first century, under Clement, the head of the Church at that time, there was a close business connexion with Rome was undertaken and a connexion with Origen and his work, the Church had assumed that in the meantime all the commercial cities on the coasts of the Mediterranean had Christians in their midst, and that before long the regions adjoining these cities accepted the Gospel. According to tradition the Church in Gaul was founded by Trophimus, who was sent there by St. Paul; to Crescens, a disciple of the Apostles, is ascribed the preaching of the Gospel among the Gallic tribes for a considerable time. Papias, the founding of the Church of Paris. To Eucharius and Maternus, two disciples of St. Paul, are attributed the founding of the Churches of Trier and Cologne. It is certain that flourishing dioceses arose in Lyons and Vienne during the reign of Marcus Aurelius (161-180). At the beginning of the third century, according to the Venerable Bede (Histor. gentis Angl., i, iii), the first missionaries came to England during the reign of Pope Eleutherius (177-90). By the opening of the third century, the British Church had spread beyond the Roman possessions in Britain and may even have embraced Ireland. In the meantime the barbarians living along the northern bound-aries of the Roman Empire had begun their migrations and predatory incursions. Along this border lived the tribes of the Teutonic family, divided by the Oder into the East Germans and West Germans. The East Germans included the Ostrogoths and Visigoths, the Burgundians, Vandals, Heruli, Rugi, and Scyri. The West Germans were divided into the Ingvarones or Germans on the sea-coast, including the Later Frisians and Anglo-Saxons; the Istvareones or the Germans of the Rhine, including the Franks between the Weser and Rhine; the Hériones, among whom were the later Thuringians and the upper German tribes, and the state of the Franks in the Rhineland. As early as the years 161-80 the Marcomanni, a West German tribe, advanced as far as Aquileia; they were defeated, but introduced northern elements into the population. After this failure the current of the migration divided into two streams: one to the southeast, the migration of the East Germans; one to the south-west, the migration of the West Germans. Of the East Germans, the Goths reached the lower Danube and the Black Sea and divided, according to these respective positions, into the Ostrogoths and Visigoths. In 375, on account of the pouring in of Asiatic hordes through the gateway of the nations between the Urals and the Caspian, the Ostrogoths came under the power of the Huns. The Visigoths, who were also pressed, protected themselves by receiving land somewhat south of this from the Emperor Valens and Theodosius. When, after the death of Theodosius, the Roman Empire was divided in 385 into the Western and Eastern Empires, ruled respectively by his sons Honorius and Arcadius, the Visigoths under Alaric plundered Thrace and Greece and, with the permission of Arcadius, settled in Illyria. From here their connexions increased; they received land somewhat south of this from the Emperor Valens and Theodosius. When, after the death of Theodosius, the Roman Empire was divided in 385 into the Western and Eastern Empires, ruled respectively by his sons Honorius and Arcadius, the Visigoths under Alaric plundered Thrace and Greece and, with the permission of Arcadius, settled in Illyria. From here their connexions increased; they received land somewhat south of this from the Emperor Valens and Theodosius. When, after the death of Theodosius, the Roman Empire was divided in 385 into the Western and Eastern Empires, ruled respectively by his sons Honorius and Arcadius, the Visigoths under Alaric plundered Thrace and Greece and, with the permission of Arcadius, settled in Illyria. From here their connexions increased; they received land somewhat south of this from the Emperor Valens and Theodosius. When, after the death of Theodosius, the Roman Empire was divided in 385 into the Western and Eastern Empires, ruled respectively by his sons Honorius and Arcadius, the Visigoths under Alaric plundered Thrace and Greece and, with the permission of Arcadius, settled in Illyria. From here their connexions increased; they received land somewhat south of this from the Emperor Valens and Theodosius.
the state religion of Rome since the time of Constantine the Great, with a more stable power, the united West Germans.

The West Germans, although their migrations were not very extended, had changed their habitats as follows: in the fourth century the Alamanni advanced into Alsace and in the fifth century took entire possession of it, spreading towards the north as far as Coblenz. The Franks were divided into the Ripuarian and Salian Franks; the former settled on both sides of the middle and lower Rhine, the latter advanced from the Scheldt to the Somme. Towards the end of the third century the Saxons advanced from the Rhinland, while the Franks, with the aid of the Angles, they conquered Britain; the former inhabitants of Britain took refuge in Wales and France and gave their name to Brittany. The Frisians settled on the coast and islands of Schleswig-Holstein; the Thuringians spread from the lower Elbe to the southern bank of the Main. The Bavarii went farthest south. At the time of the birth of Christ they lived in modern Bohemia; about 500 their territory extended from the Leech to the Enns and from the Danube to the junction of the Eisack and the Adige. The region occupied by the tribes just named enlarged the scene of European history; all that was newly needed was the political and spiritual union of these peoples to make them the leading people of Europe. The political union was made by the Franks, the spiritual union by Christianity. In the end these were combined into a form of theocracy which, by a rapid series of victories, conquered not only Southern Europe, but also Middle and Eastern Europe as well.

Just as the fifth century passed into the sixth (481-511) Clovis, King of the Salian Franks, forcibly subdued the chief Roman fragments of the north, and he led them to embrace Christianity after his own conversion. Clovis first united what was left of the Roman Empire on the Seine and Loire with his own domain and made Paris his capital. After this he subdued the Alamanni on the Rhine, Mosel, Lower Main, and Neckar; as the champion of the doctrines of Roman Christianity, he conquered the King of the Arian Visigoths near Poitiers (507) and seized the Visigothic territory between the Loire and the Garonne. By overthrowing the petty Saharan chiefs and the royal family of the Ripuarian Franks, he made himself the ruler of all the Frankish tribes. The work was completed by his four sons, who seized the territories of the Thuringians and Burgundians, forced the Ostrogoths to evacuate Italy, and finally used the treaties obtained by Clovis himself to divide the Frankish kingdom.

Thus was laid the foundation of the Franco-Christian Empire which opened to Christianity a new missionary field to be won over to the Faith only by properly trained apostles. The training was given in the monastic institutions which, in imitation of the East, had been founded all over Western Europe. One of the chief factors in the conversion of the heathen was the Order of St. Benedict of Nursia, encouraged by Gregory the Great. The precursors of the Benedictines were St. Patrick (432) and St. Columba (about 550), who converted Ireland and Scotland, while the Anglo-Saxons received Christianity from the Benedictine Augustine (596), who had been specially sent to them by Pope Gregory. In Ireland several bishops, numerous priests and many monasteries; his own see was Armagh. Columba founded the celebrated monastery on the Island of Iona, between Ireland and Scotland, which was the centre of the Scotch missions and dioceses. The Abbey of St. Columba and his companions erected the metropolis of the Scotch Church, Dublin (Eboracum), and the see of London; in the course of the seventh century the successors of Augustine, Mellitus and Theodore of Tarsus, completed his work.

A glorious band of self-sacrificing apostles of the Faith, from Columbanus and Gallus to Boniface, carried Christianity from the British Isles to the Continent. They founded their work on what scanty remains of Christianity still existed in the former Roman provinces. In the fifth century Severinus and Valentinus laboured in southeastern Germany. They found the remains of nearly obliterated sees in Lorch, Pettan, Windisch in Switzerland, Chur, Basle, Strasburg, Avenches in Switzerland, Martigny, and Geneva, but the Teutonic migrations and the disorders consequent on them had almost destroyed the life of the Church. About 610 Columbanus crossed the Vesges and found a bishop in the Ripuarian kingdom, and Franks, Annegray and Luxueil, and came to Lake Constance; here from Bregenz as a centre he preached Christianity, while his companion St. Gall became the founder of the celebrated monastery of St. Gall. In the early part of the seventh century the monks Agilus and Eustasius, of the monastery of Luxueil, preached the Gospel in Bavaria; they were followed by Rupert of Worms and Emmeram of Aquitaine. In 695, John the Baptist, first Bishop of Freising, and Kilian in Wurzburg. Ecclesiastical life on the Rhine was largely developed by Bishops Nicetus of Trier, Cunibert of Cologne, Dragobodo of Speyer, Amandus, Lambert, and Hugo of Maastricht. The Gospel was brought to the Frisians by Wilfrid of York and Willibrord of Northumbria. In the year 724 the Emperor Pepin, with his companion, Suidbert, went into the county of Mark in the region of the Weser, Lippe, and Ruhr Rivers; the brothers Ewald laboured with little success among the Saxons. An organization including all these countries was not established until the appearance of the greatest of the apostles of the Germans, St. Boniface. He entered on his career in the time of the Carolingian monarchy. Pepin, the son of Charles Martel, was the first Bishop of Freising, and Kilian in Wurzburg.

Repeted divisions of the kingdom, disputes as to succession, civil wars, and the power of the nobles almost brought the great Frankish kingdom to dissolution. It was saved from utter ruin by Pepin of Heristal, Mayor of the Palace (Major domus), who gradually took control of the government. In 687 Pepin won for himself the position of Mayor of the Palace of Neustria and Burgundy, in addition to that for Austrasia which he already held; in this way he reunited the kingdom. He then undertook the conquest of the tribes which had broken loose from the Frankish rule and encouraged the missions to the West Frisians. Pepin’s son Charles Martel, active, held a position of such power that he was able, in the great battle of Poitiers, 732, to protect Christian German civilization against the attempt of Islam to conquer the world. Pepin the Short, the son of Charles, brought about the union of Church and State which had so great an influence on the history of the world. Having obtained the title of King in 751, his son, Charles the Great, who ruled from 768 to 814, kept the territories of the former Ripuarian kingdom, where he reigned from 772 to 824, went to the defence of Pope Stephen II, who had appealed to him for aid, from the attacks of the Lombards; this was followed by the so-called “Donation of Pepin”, a grant of territory to the pope which was the foundation of the later States of the Church. Their mutual engagements fixed not only their own policy but also that of their successors. Like Pepin, his son Charles Martel was active, who did much for the Church; he lent it monasteries and goods, and all his conquests were undertaken for the good of the Church and Christianity. By successful campaigns against Aquitaine, the Lombards, Avars, Saxons, and Danes, and by treaties with the Slavic peoples, Charlemagne increased his domain until it extended from the Elbe and the Apenines to the Rhine, the Rhine to the Elbe, and the Elbe to the Rhine. His kingdom became a world-empire and he himself one of the great rulers of history, worthy of reviving the Western Roman Empire. He was crowned, Christmas Day, 800,
by the pope, and the new empire rested essentially on the
basis of an alliance with the Church. Its ideal
was the Kingdom of God on earth, in which the em-
peror by Divine appointment is God's viceroy in order
to lead and rule all races as divided into nations,
classes, and distinctions of rank according to Divine
will.

Pepin the Short had been filled with this lofty con-
ception; consequently extraordinary success attended
the missionary labours of the Church under both
rulers. As early as 716, under the rule of Charles
Martel, the Anglo-Saxon monk Winfrid, better known
as Boniface, landed on the Continent; he was to be the
reformer and organizer of German ecclesiastical life.
He always laboured in union with Rome, and was
himself a missionary in Frisia with Willibrord, then,
in 722, in Hesse and Thuringia, and in 736 in Ba-
varia. Having been made an archbishop and having
received authority from Rome, he founded a number of
monasteries, e. g. that of Fulda, and the Bishop-
ries of Eichstadt, Würzburg, Burzburg, and Erfurt.
By means of symbols held every five years he brought
about the closer union between the old and new
dioceses, and placed the newly founded sees in Thu-
ringia and Hesse, as well as those of Speyer, Worms,
Cologne, Utrecht, Tongern, Augsburg, Chur, Con-
stance, and Strasbourg, under Mainz as metropolitan
see, of which he became archbishop in 740. In the
reign of Charlemagne the large territories of the Sax-
ons and Avars were added to the lands thus organized,
and these new regions also received missionaries and
bishops. The result was the founding of the Di-
oceses of Bremen (787), Paderborn (806), Werden,
and Minden in the country of the Engern, Osnabrück
and Münster (785) in Westphalia, Halberstadt and Hildes-
heim (817) in Eastphalia; the metropolitan of all the Sax-
ons, and faithful people, was consecrated by the
missionary Duke Tassilo II; when the East Mark was founded
the Avars came under the influence of the sees and monas-
teries established in this country; after their sub-
jugation they were placed partly under the jurisdic-
tion of the Bishop of Salzburg and partly under that
of the Patriarch of Aquileia. At these points, Christianity, as formerly in the
Roman Empire, extended beyond the boundaries of
Charlemagne's dominions, and new tribes and peoples
were evangelized, while, at the same time, Christian
civilization was peacefully established within the
Frankish Empire. The monastery of Corvey on the
Weser, and the Sees of Bremen and Hamburg (831)
were established by Boniface, and the Archepiscopal
seat of Mainz was founded by the monk Anschar
of Corvey, first Archbishop of Hamburg, laboured with great zeal as Apostolic legate in
Denmark, Sweden, and Norway; his successors
were equally active as missionaries and bishops.
However it was not until the reign of Canute the Great
(1014–35) that the victory of Christianity in Denmark
was assured; in 1104 Lund was made the metropolitan
See of the Slavish and Germanic peoples of Sweden, the
same period to the twelfth century Trondheim was made the same for
Norway. Iceland was won for Christianity about the
year 1000 and was divided into the two sees of Skal-
hold and Holmun. The inhabitants of the Orkneys,
Hebridies, Faroe, and Shetland Islands were converted
about the same period; the See of Greenland was established;
placed under the metropolitan See of Hamburg
Bremen, which had been united in 849, and later
under the jurisdiction of the metropolitan See of Norway.

During the period of the Teutonic migrations the
Slavs had come into contact with Christianity and were
converted partly by Christian emperors, as for
Thrace, Macedonia, Greece, and Dalmatia, partly
through the influence of neighbouring Christian coun-
tries, as in Carinthia. In 806 the Bishop of Passau
undertook the conversion of Moravia; that of Pan-
nonia was attempted by Archbishop Adalram of Salz-
barg (821–36). In both these countries a great mis-
ionary work was done by Cyril and Methodius; the
latter, Methodius, became Archbishop of Moravia and
Pannonia. The work of converting Bohemia began
in the year 845; the country was at first under the care
of Ratisbon; in 973 a diocese was founded in Bohemia itself at Prague, which was suffragan to Mainz.
Polesand was brought to Christianity by its ruler Duke
Mieczyslaw (963), and in 968 he erected the Bishopric
of Posen. In the year 1000 Gnesen was made a met-
ropolitan see, its suffragan sees were Riga (1018),
Breslau (1010), and Colberg (1014). Finally the
reigns of Heinrich I and Otto I the northern Slavs,
living in regions subsequently German, namely the
Wends, including those living in Pomerania, as well as
the Obodrites and Sorbs on the Oder, Vistula, and
Elbe, in Lusatia, and Saxony were forcibly Chris-
tianized. The new Sees of Havelberg, Brandenburg,
Meissen, Zeitz, Merseburg, and Oldenburg (Stargard)
served as Unites from which the work of conversion
could be carried on; Magdeburg was the centre of the
entire Slavonic mission.

It was during this same period that the Greek
Church spread through the eastern part of Europe.
In 955 the first Christian princess of Russia, Oiga, was
baptized at Constantinople; during the reign of her
grandson Vladimir (980–1015) the work of conversion
of the people was begun; for Russia was the head of
the religion of the country. In 964 the Bulgars, at the
command of their prince Bogoris, accepted Christian-
ity as a people, and from 870 were under the eccle-
siastical control of Constantinople. A bishop sent
from Constantinople introduced Christianity among
the Magyars, or Hungarians; the work was completed
by German missionaries sent in accordance with the
desires of the Emperors. The first
Christian ruler of Hungary was Stephen (997–1038).
Many sacrifices, however, were still necessary in order to keep what had been gained for Christianity
and to protect these gains against the threatened dan-
gers of Mohammedanism and heathenism. These
sacrifices were freely made by medieval Christian
kings, who, in the care of their appointed guardians, the Catholic orders, the various
nations and their rulers were filled with Christian
thoughts and feelings. Although the conception of
their respective positions held by the human represen-
tatives of the secular and spiritual power inevi-
tably led to friction, especially in the age of the He-
henstaufen emperors, nevertheless all recognized the
common faith and the results of the faith and civiliz-
ation, as foes both in Europe and outside of it. A
convincing proof of this was the courageous struggle
of Europe against the attempted inroads of Islam, and
especially the expeditions of conquest to the Holy
Land repeatedly undertaken by the various nations
of Europe acting together. Spain, which since 711
had been almost entirely under the control of
the Arabs, was able in 1212 to drive them as far back as
Granada; in 1492 Granada also fell. From 875 Siency
had been in the hands of the Saracens, but it was freed
by the courageous Normans (1061–91). The so-
called Crusades (1061–1244) continued with interrup-
tions for nearly two hundred years; among those who
shared in them were monks, as Peter the Venerable,
leaders of the Teutonic order; rulers of the
great nations of Western Europe, as the German
emperors, Frederick Barbarossa and Frederick II; the
French kings, St. Louis and Philip II, and the
English Richard the Lion-Hearted. Orders of
knights, as the Order of St. John, were formed to take part in these
expeditions. The original aim of the Crusades, the
freeing of the Holy Land from the control of Moslem
rulers, it is true, was not attained. But the power
of Mohammedanism was weakened for a long time to
come; the civilization of Western Europe, moreover,
EUROPE

EUROPE

A more lasting success, however, followed the attempts, patterned on the Crusades, to carry on wars of conversion and conquest in those territories of northeastern Europe peopled by tribes that had lapsed from the faith or that were still heathen; among such pagans were the Obotrites, Pomeranians, Wiltzi, Sorbs, Letts, Livonians, Finns, and Prussians. The preparatory work was done in the twelfth century by missionaries of the Premonstratensian and Cistercian Orders. They were aided with armed forces by Duke Henry the Lion of Saxony, Albert the Bear of Brandenburg, Boleslaw of Poland, and St. Erik IX of Sweden. From the beginning of the thirteenth century Crusades were undertaken against Livonia, Semgall, a division of the present Courland, and Estonia; the Teutonic Knights conquered Prussia after a struggle that lasted more than fifty years. In Lithuania the situation was described elsewhere, and was facilitated by the violent procedure of the petty princes who had absolute sovereign power over their subjects. The first of the ruling princes to make the change was Albert of Brandenburg, Grand Master of the Teutonic Knights (1525); he was followed by the Elector John of Saxony, Philip, Landgrave of Hesse (1527), and at almost the same date by nearly all the German imperial cities. The movement soon gained the northern countries, Denmark, Sweden, Norway, and the Baltic provinces; these all gave their adherence (1530) to the so-called Augsburg Confession, while the upper German imperial cities, Strasburg, Constance, Lindau, Memmingen, led to the Tetrapsal Confession of the so-called Reformed Church founded by Zwingli and especially strong in Switzerland. The Reformed Church also found adherents in the Palatinate, and at the beginning of the seventeenth century in Hesse-Cassel and Brandenburg. The Anglican Church was

Christianity did not win the victory until 1568. After this only the Turks, in the southeastern corner of the Continent, were a cause of alarm to Christian Europe for centuries. The decline of the power of the Eastern Empire drove the Turks over the Bosporus; in 1365 they had control of Adrianople; in the course of the fourteenth century the Serbs, Bulgars, Macedonians, and the inhabitants of Thessaly became their subjects. In 1453 the Turks took Constantinople, in 1610 Trebizond, in 1820 even Otranto in Apulia; after 1517 they owned half of Hungary. It was not until the eighteenth and nineteenth centuries that their possessions were reduced to their present boundaries, thus limiting Mohammedanism to a small part of the population of Europe.

At the beginning of modern times a great change took place in the boundaries of the European States. The cause was that ecclesiastical movement known as the Reformation, which placed in opposition to the unity of Catholicism in Western Europe the numerous religious associations that together form Protestantism. The apostasy of the various countries and cities, which began soon after Luther first appeared, was brought about by the most varied causes, de-

established in 1549 in Great Britain; in 1530 the French Reformed Church adopted the "Confession Gregorienne"; in 1560 the Scotch Reformed the "Confession Scotica"; from 1592 the Reformation in Scotland adopted a Presbyterian form of government. Since 1562 the Reformation in the Netherlands has held to the "Confession Belgica," and the Reformed Church in Hungary since 1567, to the "Confession Hungarica." Soon the Counter-Reformation, called into life by the Council of Trent (1545-63) to prevent the loss of the whole of middle Europe, appeared; its success was assured by the aid of the Society of Jesus. In this way various princes and bishops who were desirous of doing their duty were enabled to hold their countries to the Catholic Church, as the Duke of Cleves, the Electors of Mainz and Trier, the Bishops of Augsburg, Wurzburg, Bamberg, Münster, Constance, Basle, the Abbey of Fulda, but especially the Dukes of Bavaria and the Hapsburg dynasty within their Austrian provinces. Soon the hostility between the two ecclesiastical parties grew so bitter that a trifling incident sufficed to bring on a terrible religious conflict, the Thirty Years War (1616-18). Two religious confessional leagues confronted each other in Germany;

the Catholic League, which was formed in 1609 among the Catholic States of the German Empire and had for its leader the vigorous Duke Maximilian of Bavaria, and the Union in which, from 1609, most of the Protestant princes and cities combined under the leadership of Frederick IV of the Palatinate. Foreign powers—Denmark, Sweden, and France—also took part in the war. The result of the Thirty Years' War confirmed in the Peace of Westphalia, laid the foundation of confessional relations as they now exist. Neither internal commotions nor seemingly mighty political revolutions, such as the illumination of the French encyclopedists and the German neo-classicists, the temporary supremacy of rationalism, and the French Revolution, have greatly changed these relations. The present condition, therefore, has been during the course of the nineteenth century and up to the present time is as follows.

Present Condition of Religion in Europe.—(1) Relations of the Different States to the Religious Communions.—In the German Empire the formation of religious denominations and their religious worship are subject to the legislation of the several States. Some States allow complete freedom, as Prussia, Wurttemberg, Hesse, and Saxe-Coburg-Gotha; others supervise religious worship, as Baden, Waldeck, and Mecklenburg; others again make the establishment of religious denominations depend on the Government, as in Bavaria, Saxony, Brunswick, Saxe-Meiningen, and Alsace-Lorraine. The Catholic and the Evangelical Churches are, therefore, recognized in the latter States. In England and Wales the Anglican is the State Church, its head being the king; the fundamental principles are defined by Parliament. There is a similar arrangement for the Presbyterian State Church in Scotland where, however, the organization is somewhat freer. On the other hand the Anglican Church of the British Dominions is said to be the Church of Canada, while in South Africa and Australia the Church is the Established Church. In New Zealand the Church of England is the Established Church, and in the other British Dominions, the Church of God is the Established Church. The Dissenters, who in 1689 were only conditionally tolerated, have now equal rights. In France the Separation Law of 9 December, 1803, brought about the separation of Church and State and provided for the formation of associations cultuelles for the exercise of religion. In Italy the Constitution originally declared the Roman Catholic religion the religion of the State; it has since been withdrawn from it; besides the Roman Catholic Church, the Evangelical Waldensian Church, the National Greek Church, and the Jewish communities are organized as Churches with separate constitutions. In Spain and Portugal the State religion is the Roman Catholic. In Belgium the Catholic, Protestant, Jewish, and Anglican forms of worship are recognized by the granting of salaries from the State to those having ecclesiastical charges. Outside of these any religious community is a private association. The Netherlands grants equal protection to all confessions. So does Switzerland, excepting that in this country a more exacting control is exercised over the Roman Catholic Church. In Denmark the Evangelical Lutheran Church is the only established, and the salaries of the ministers are paid by the State and subject to removal by the State; other religious communities have no claim to state support. The case is the same in Sweden, where, in addition, the condition is laid down that the king, the members of the Council of State, and foreigners who are appointed teachers at the universities must be of the Christian faith. In Norway the ordinance is enforced for the head of the State. In Austria the Churches and religious associations recognized by law are as follows: the Roman Catholic, the Uniat Greek, and Uniat Armenian Churches, the Evangelical Churches of the Augsburg and Helvetic Confessions, the Orthodox Greek Church, the Jewish religious community, the religious association of the Russian sect of the Liptovans, and the Oriental Armenian of Bukovina, the Old Catholic religious community, and the Moravian Brethren (Herrnhuter). The expenses of the Roman Catholic and Orthodox Greek Churches are met from a fund controlled by the State and obtained from the secularization of Church property in the reign of Joseph II. In Hungary the Roman Catholic Church was originally the state religion; the State grants in addition free exercise to other Christian confessions and to the Jewish faith. Croatia-Slavonia recognizes only the Roman Catholic and Uniat Greek Churches, the Orthodox Greek and Protestant Churches, and the Jewish belief. In Bosnia and Herzegovina the ruling confessions are the Orthodox Greek and Roman Catholic Churches, and Mohammedanism. The State Church of the Balkan provinces is the Orthodox Greek. The State Church of Bavaria is the Orthodox Greek and Russian Church; the other Christian and non-Christian confessions are tolerated, the Jews have only limited rights.

(2) Organization of the Religious Communions.—The Evangelical Church distinguishes three forms of organization: (a) The episcopal, in which the ruler of the country with the aid of a subordinate hierarchy exercises ecclesiastical authority. This is the form in force in Sweden, Norway, Denmark, and Finland, (b) The consistorial organization, in which the ruler is aided by a consistory made up of ecclesiastical and secular members. This form is found in Mecklenburg-Schwerin, Mecklenburg-Strelitz, Saxe-Coburg-Gotha, Saxony-Altenburg, Schwarzwald-Rudolstadt, Schwarzwald-Sonderhausen, the two principalities of Hesse, Schaumburg-Lippe, and the principalities of Wurttemberg, Bavaria, and Alsace-Lorraine, and Russia. (c) The synodal form of organization and similar Presbyterian associations which are based on assemblies of elected representatives and the ordinances passed by these. This form of organization is in existence in Austria-Hungary, Prussia, Bavaria, Saxony, Wurttemberg, Baden, Hesse, and other German States, where the consistorial system is not in force. The synodal organization is found among the non-Anglican Churches in Great Britain, in France, among the Italian Waldenses, in the Netherlands, Belgium, Switzerland, and Spain; also in connexion with the episcopal form of church government in Sweden and Finland. The Anglican Church, called in England and Wales the Established Church of England, and in Ireland the Established Church of Ireland, is a form of church government; in Ireland the episcopal and synodal systems are united. The head of the Church is the king, England and Wales are divided into the two church provinces of Canterbury and York. The Archbishop of Canterbury is the Primate of All England; under Canterbury are 28 suffragan dioceses; 1 York consists of an archdiocese and 9 suffragan bishoprics. Ireland has 2 archbishops: Armagh, which has the primacy of all Ireland, and Dublin with 10 suffragans; Scotland has 7 dioceses. The organization of the Oriental Greek Church varies in different countries. In Russia the head of the Church is the Tsar, who appoints the members of the Holy Synod, the highest ecclesiastical body. In Turkey the Ecumenical Patriarch is the head; under him are 1 archbishop and 30 bishops, who represent the national synod is the highest ecclesiastical authority; in Servia a metropolitan with the bishops; in Bulgaria the church government is vested in an exarch, aided by archbishops, bishops, and archpriests. The Holy Synod of Greece consists of five prelates or bishops named the king. In the Austro-Hungarian Monarchy there are 3 dioceses of the Oriental Greek Church: the Austrian, or Prague, and the Czech, with the suffragan Dioceses of Zara and Cattaro, the Archdiocese of Karlowitz (Patriarch-Archbishop), with 6 suffragans, and the Archdiocese of Hermannstadt, with 2 suffragans. Bosnia and Herzegovina have each a metropolitan.

For the ecclesiastical organization of European countries, see the respective articles on the various political divisions, also Eastern Churches. The
EUSEBIUS, a titular see in Provincia Ephratiensis, suffragan of Hierapolis. The former name of this city was Thapsacus (Thatpsochak), an Aramean word which means “fort”; it was an important trade-centre at the northern limit of Solomon’s kingdom (III K., iv, 21). The younger Cyrus and Alexander the Great forced the Ephratiates at this point. The Macedonians called it Amphipolis. It took finally a third name, Europus, under which it is mentioned by the geographers Ptolemy, Pliny, Hierocles, Georgius Cyprius, etc. and figures in the “Notitia episcopatum” of the Antiochene patriarchate. (See Echoes of Orient, 1907, 145.) We know but one of its Greek bishops, in 431 (Lequien, Oriens christi, II, 949), and a Jacobite one, between 535 and 577 (Revue de l’Orient chrétien, T. XX, 1913, 454). Europus was a forerunner of Ephesus (Procop., De aedifici., II, 9). When the city was destroyed is unknown. Its ruins stand at Djerbas, a corrupted form of Europus, on the right bank of the Ephruses, about twenty-five kilometres south of Biredjik, in the vilayet of Aleppo.

Eusebianites. See Eusebius of Nicomedia.

EUSEBIUS, Saint, Bishop of Vercelli, b. in Saragossa, 253; d. at Vercelli, Piedmont, 1 August, 371. He was made lector in Rome, where he lived some time, probably as a member, or head, of a religious community (Spreitenhofer, Die Entwicklung des alten Mönchstums in Italien, Vienna, 1894, 14 sq.). Later he came to Vercelli, the present Vercelli, and in 340 was unanimously elected bishop of that city by the clergy and the people. He lived in perfect peace during his episcopate, and in the hands of Pope Julius I on 1 December of the same year. According to the testimony of St. Ambrose (Ep. lixii, Ad Vercellenses) he was the first bishop of the West who united monastic with clerical life. He led with the dignity of his city a common life modelled upon that of the Eastern cenobites (St. Ambrose, Ep. Ixxxi and Serm. Ixxxiv.). For this reason the Canon Regular of St. Augustine honour him along with St. Augustine as their founder (Proprium Canon. Reg., 16 December).

In 354 Pope Liberius sent Eusebius and Bishop Lucifer of Cagliari to the Emperor Constantinus, who was then at Arles in Gaul, for the purpose of inducing the emperor to convocate a council which should put an end to the dissensions between the Arians and the orthodox. The council was held at Milan in 355. At first Eusebius refused to attend; it because he foresaw that the Arian bishops, who were supported by the emperor, would not accept the decrees of the Nicene Council and would insist on the condemnation of St. Athanasius. Being pressed by the emperor and the bishops to appear at the synod, he came to Milan, but was not admitted to the synod. The emperor ordered that St. Athanasius had been drawn up and was awaiting the signature of the bishops. Eusebius vehemently protested against the unjust condemnation of St. Athanasius and, despite the threats of the emperor, refused to attach his signature to the document. As a result he was sent into exile, first to Scythopolis in Syria, where the Arian Bishop Patro- philus, whom Eusebius calls his jailer (Baronius, Annal., ad ann. 366, n. 97), treated him very cruelly, then to Cappadocia, and finally to the Thebaid. On the accession of the Emperor Julian, the exiled bishops were allowed to return to their sees, in 362. Eusebius, however, and his brother-exile Lucifer did not at once return to Italy. Acting either by force of their former legatine faculties or, as is more probable, having received new legatine faculties from Pope Liberius, they remained in the Orient for some time, helping to restore peace in the Church. Eusebius went to Alexandria and to Cyprus, and with St. Athanasius put an end to the synod which, in 362, was held there under their joint presidency. Besides declaring the Divinity of the Holy Ghost and the orthodox doctrine concerning the Incarnation, the synod agreed to deal mildly with the repentant apostate bishops, but to impose severe penalties upon the leaders of the several Ariantizing factions. At its close Eusebius went to Antioch to reconcile the Eustathians and the Meletians. The Eustathians were adherents of the bishop, St. Eustathius, who was deposed and exiled by the Arians in 331. Since Meletius’s election in 361 was brought about chiefly by the Arians, the Eustathians would not recognize him, although he solemnly proclaimed his orthodox faith from the ambo after his episcopal consecration at Alexandria in 362. It is evident that Eusebius should reconcile the Eustathians with Bishop Meletius, by purging his election of whatever might have been irregular in it, but Eusebius, upon arriving at Antioch, found that his brother-exile Lucifer had consecrated Paulinus, the leader of the Eustathians, as Bishop of Antioch, and thus unwittingly frustrated the purpose of his visit. Unable to reconcile the factions at Antioch, he visited other Churches of the Orient in the interest of the orthodox faith, and finally passed through Illyricum into Italy. Having arrived at Vercelli in 363, he assisted the zealous St. Hilary of Poitiers in the suppression of Arianism in the Western Church, and was one of the chief opponents of the Arian Bishop Auxentius of Milan. The Church crowns him as a martyr and celebrates his feast as a semi-double on 16 December.

In the “Journal of Theological Studies” (1900), I, 302-99, E. A. Burn attributes to Eusebius the “Quicunque.” (See Athanasian Creed.)

Three short letters of Eusebius are printed in Migne, P. L., XII, 947-54, and X, 713-14. St. Jerome (De viris ill., x. e. xvi, and Ep. li, n. 2) testifies to his learning and the elegance and translation of his writing. In comparing the Gospels, written originally in Greek by Eusebius of Cesarea; but this work has been lost. There is preserved in the cathedral of Vercelli the “Codex Vercellensis,” the earliest manuscript of the Old Latin Gospels (codex α), which is generally believed to have been written by Eusebius. It was published by Irico (Milan, 1748) and Barchini (Rome, 1749), and is reprinted in Migne, P. L., XII, 9-48; a new edition was brought out by Belshem (Christiania, 1894). Krüger (Lucifer, “Bischof von Calaris”, Leipzig, 1886, 118-30) ascribes to Eusebius a baptismal oration published by Caspari (Quellen zur Geschichte des Taufsymbol, Christiania, 1869, II, 142-40). The confession of faith “De trinitate confessio,” P. L., XII, 950-968, sometimes ascribed to Eusebius, is denounced by Butler, Lives of the Saints, 15 Dec.; Barlow-Gould, Lives of the Saints, 15 Dec.; Davies, in Dict. Christ. Biog., St. Jerome, De viris illustribus, xxvii; Ferreirius, Vita s. Eusebii episcopi Vercellensis (Vercelli, 1960); Ugolino, Italia Sacra (Venecia, 1719), IV, 749-61; Baronius, Annales, ad ann. 355-571, and in his Itinerarium, 11 December; Sarton, Gli antichi usi e costumi d’Italia (Piemontese) (Turin, 1899), 412-20, 514-54; Bardensbrewer, Patrologie, XLI, 1304; (Freiberg in Br.; St. Louis, 1908), 417-18.

Michael Ott.
when, as Bishop of Samosata, he took part in the con-
secration of St. Meletius, the newly elected Patriarch of Antioch. Just then the Eastern Church was rent by Arianism and its affiliated heresies. Most of the episcopal sees were occupied by Arian bishops, and Meletius himself was elected Patriarch of Antioch only because the Arians believed him to be a supporter of their heresy. Tillemont and a few other historians even maintain that Eusebius was at that time leaning towards Arianism. Whatever may have been the fault of Eusebius previously, it is certain that at a synod held in Antioch in 363 the Nicene formula, with express mention of the term homoousios, was accepted, and the document was signed by Eusebius and twenty-four other bishops.

When the Arians discovered that Meletius upheld the doctrine of the Nicene Council, they declared his election invalid and attempted to obtain from Eusebius, to whom they had been entrusted, the synodal acts proving the lawfulness of the election. The Emperor Constantius, who supported the Arians, ordered Eusebius to surrender the document, but without success. Thereupon Constantius threatened Eusebius with the loss of his right hand, but the bishop calmly presented both his hands to the bearer of the imperial message, saying: "I will not surrender the document by which the justice of the Arians can be proved." The emperor was struck by the constancy of Eusebius and left the docu-
ment in his possession.

It was chiefly due to the concerted efforts of St. Eusebius and St. Gregory Nazianzen that, in 370, St. Basil was elected Archbishop of Cæsarea in Cappado-
cia. From this time also dates the tender friendship between St. Eusebius and the last-named Father, which is attested by some still extant letters written by St. Basil to the Bishop of Samosata. Eusebius dis-
played himself in a still more striking manner in the conflict of the Catholics by the Arian Emperor Valens. Disguised as a military officer, he visited the persecuted Churches of Syria, Phoenicia, and Palestine, exhorting the afflicted Catholics to remain loyal to their faith, or-
daining orthodox priests where they were needed, and in many other ways assisting the Catholic bishops in the difficult exercise of their duties, and of the faithful in their turn. It is in account of this unceasing zeal of Eusebius that St. Gregory Nazianzen calls him "a pillar of the Church", "a gift of God", "a rule of faith", etc. (Migne, P. G., XXXI, 57). Incensed at the great success of Eusebius, the Arians prevailed upon the Emperor Valens to banish him into Thrace. After the death of Valens, in 378, he was allowed to return to his see. On his journey from Thrace to Samosata he was instrumental in the appointment of numerous orthodox bishops, among whom were Acacius at Berea, Theodotus at Hierapolis, Isidore at Cyrrhus, and Eulogius at Edessa. Having returned to his see, he resumed his former activity against the Arians, both in his own diocese and in the neighbouring churches. While both parties were contending for the see of Bishop Maris, at the little town of Dolicha, near Samosata, an Arian woman struck him on the head with a tile thrown from the roof of her house. He died of this wound a few days later. The Greeks honour him as a martyr on the 21st of June, the Latins on the 221.

The Martyrology of Usuard styles him confessor at Rome under the Arian emperor Constantius and adds that he was buried in the cemetery of Callistus. Some later martyrlogies call him a martyr.

The "Acta Eusebii", discovered in 1179 by Mom-
brutius and reproduced by Baluze in his "Miscellenae" (1678-1716), tell the following story: When Pope Liber-
us was permitted by Constantius to return to Rome, supposedly at the price of his orthodoxy, by subscribing the Arian formula of Sirmium, Eusebius, a priest, an ardent defender of the Nicene Creed, publicly preached against both pope and emperor, branding them as heretics. When the orthodox party who sup-
ported the antipope Felix were excluded from the clergy, Eusebius continued to officiate in his own house. He was arrested and brought before Liberius and Constantius. Here he boldly re-
proved Liberius for deserting the Catholic Faith. In con-
sequence he was placed in a dungeon, four feet wide (or was imprisoned in his own house), where he spent his time in prayer and died after seven months. His body was buried in the cemetery of Callistus with the same honours. Eusebius was a friend of Usuard, the writer of the Acts. It is generally admitted that these Acts are a forgery either entirely or at least in part, and written in the same spirit, if not by the same hand, as the notice on Liberius in the "Liber Pontificalis". The Bollandists and Tillemont point out some grave historical difficulties in the narrative, especially the fact that Liberius, Constantius, and Eusebius were never in Rome at the same time. Constantius visited Rome but once, and remained there for about a hundred days in the year 355. If, taking for granted the alleged fall of Liberius, would overcome this difficulty by stating that, at the request of Liberius, who re-
sented the zeal of the priest, the secular power inter-
erfered and imprisoned Eusebius. It is not at all certain whether Eusebius died after the return of Liberius, during his exile, or even much before that period.

The church on the Esquiline in Rome dedicated to him, said to have been built on the site of his house, is men-
tioned in the acts of a council held in Rome under Pope Symmachus in 408 (Mansi, VIII, 236, 237), and was rebuilt by Pope Zacharias. Formerly it had a Statio on the Friday after the fourth Sunday of Lent. It once belonged to the Celestines (an order not ex-
isting since Leo XII gave it to the Jesuits. A good pict-
ure, representing the triumph of Eusebius, by Raphael Mengs, 1759, is on the ceiling. San Eusebio is the title of a cardinal-priest. The title was transferred by Gregory XVI, but restored by Pius IX.

Michael Ott.

Eusebius, Saint, presbyter at Rome; date of birth unknown; d. 372. He was a Roman patri-

cian and priest, and was mentioned with distinction in the Latin martyrlogies. The ancient genuine mar-
tyrology of Usuard styles him confessor at Rome under the Arian emperor Constantius and adds that he was buried in the cemetery of Callistus. Some later martyrlogies call him a martyr.

The "Acta Eusebii", discovered in 1179 by Mom-
brutius and reproduced by Baluze in his "Miscellenae" (1678-1716), tell the following story: When Pope Liber-
us was permitted by Constantius to return to Rome, supposedly at the price of his orthodoxy, by subscribing the Arian formula of Sirmium, Eusebius, a priest, an ardent defender of the Nicene Creed, publicly preached against both pope and emperor, branding them as heretics. When the orthodox party who sup-
ported the antipope Felix were excluded from the clergy, Eusebius continued to officiate in his own house. He was arrested and brought before Liberius and Constantius. Here he boldly re-
proved Liberius for deserting the Catholic Faith. In con-
sequence he was placed in a dungeon, four feet wide (or was imprisoned in his own house), where he spent his time in prayer and died after seven months. His body was buried in the cemetery of Callistus with the same honours. Eusebius was a friend of Usuard, the writer of the Acts. It is generally admitted that these Acts are a forgery either entirely or at least in part, and written in the same spirit, if not by the same hand, as the notice on Liberius in the "Liber Pontificalis". The Bollandists and Tillemont point out some grave historical difficulties in the narrative, especially the fact that Liberius, Constantius, and Eusebius were never in Rome at the same time. Constantius visited Rome but once, and remained there for about a hundred days in the year 355. If, taking for granted the alleged fall of Liberius, would overcome this difficulty by stating that, at the request of Liberius, who re-
sented the zeal of the priest, the secular power inter-

The church on the Esquiline in Rome dedicated to him, said to have been built on the site of his house, is men-
tioned in the acts of a council held in Rome under Pope Symmachus in 408 (Mansi, VIII, 236, 237), and was rebuilt by Pope Zacharias. Formerly it had a Statio on the Friday after the fourth Sunday of Lent. It once belonged to the Celestines (an order not ex-
isting since Leo XII gave it to the Jesuits. A good pict-
ure, representing the triumph of Eusebius, by Raphael Mengs, 1759, is on the ceiling. San Eusebio is the title of a cardinal-priest. The title was transferred by Gregory XVI, but restored by Pius IX.

Michael Ott.

Eusebius, Saint, pope, successor of Marcellus, 309 or 310. His reign was short. The Liberian Catalogue gives its duration as only four months, from 18 April to August 31, 309 or 310. He seems to have chosen his successor (with the approval of the council of Carthage) from an epiphaph for his tomb which Pope Damasus ordered. This epitaph has come down to us through ancient transcripts. A few fragments of the original, together with a sixth-century marble copy made to replace the original, after its destruction, were found by De Rossi in the Crypt of Eusebius, in the catacomb of Callistus. Eusebius had been a part of internal dissensions caused in the Roman Church by the readmittance of apostates (lupi) during the persecution of Diocletian, and which had
already arisen under Marcellus, continued under Eusebius. The latter maintained the attitude of the Roman Church, adopted after the Decian persecution (250-51), that apostates should not be forever debarred from ecclesiastical communion. But on the other hand he bore his readers only after proper penance (Eusebius miseros docut sua erima Bere). This view was opposed by a faction of Christians in Rome under the leadership of one Heraclius. Whether the latter and his partisans advocated a more rigorous (Novatianist) or a more lenient interpretation of the law has been the subject of much controversy, but it is equally certain in either case that Heraclius was the chief of a party engaged in apostates and their followers, who demanded immediate restoration to the body of the Church. Damasus characterized in very strong terms the conflict which ensued (sedito, cædes, bellum, discordia, lites). It is likely that Heraclius and his supporters sought to compel by force their adherents to divine worship, which was resented by the faithful gathered in Rome about Eusebius. In consequence, both Eusebius and Heraclius were exiled by the Emperor Maxentius. Eusebius, in particular, was deported to Sicily, where he died soon after. Miltiades ascended the papal throne, 2 July, 311. The body of his predecessor was brought to Rome on 26 September (according to the "Depositio Episcoporum" in the Chronographer of 354) was placed in a separate cubicle of the Catacomb of Callistus. His firm defense of ecclesiastical discipline and the banishment which he suffered therefore caused him to be venerated as a martyr, and in his epitaph Pope Damasus honors Eusebius with this title. His feast is yet celebrated on the 29th October.

**Eusebius, Chronicon of**, consists of two parts: the first was probably called by Eusebius the "Chronograph" or "Chronographies"; the second he terms the "Canon", or "Canons", and also the "Chronological Canons". It is brought down to the year 225, and as Eusebius alludes to it at an earlier date he has to found two editions ("Epigraph and "Præparatio Evangelica") there must have been two editions. The original is lost, but both parts are preserved in an Armenian version of which two rival translations by Zohrab and Aeberich, respectively, were published in 1818. Both these editions are superseded by Scheene's. The "Canons", moreover, are preserved in St. Jerome's translation or "Chronicon". Two Syria epistemes have also been preserved, one from a MS in the British Museum, which was translated by Roedeler for Scheene's edition, another edited by Siegfried and Gelzer (Eusebius Cannon Epitome ex Dionysii Telmaharens Excronicetis, Leipzig, 1841). Considerable extracts from the original were also preserved by later writers, especially by Synellus. These it has been possible to identify since the discovery of the Armenian version. They will be found in Scheene.

The "Chronography" is an epitome of universal history. It is divided into five parts: (1) the history of the Chaldeans, and the Assyrians, followed by lists of the Assyrian, Median, Lydian, and Persian kings; (2) Old Testament history; (3) Egyptian and Roman history; (4) Greek and Roman history. It is, like the "Præparatio Evangelica", full of quotations from lost authors. As an illustration of its value in one particular province we may turn to the third chapter of Smith's "Chaldean Account of Genesis", entitled "Chaldean Legends transmitted through Berosus and other Authors". The longest and most important extracts here given, containing, e. g. the Babylonian story of the Creation and the Flood, owe their present form to Eusebius. The "Canons" are a series of chronological tables with short historical notices. The years of Abraham, beginning from the supposed date of his birth, form the backbone. Alongside of these are placed the regnal years of the monarchs of different kingdoms as they rose and fell. A single extract will, however, serve better than any description to give the character and contents of the "Canons". We have shown above the value of the "Chronicle" to an Assyriologist; our second example will illustrate its importance for classical scholars. On almost the first page of Jebb's edition of the newly discovered poems of Bacchylides, the notices in the "Chronicle" concerning the poet are discussed. There are two such notices. We give the first with its context, as it is found in the facsimile of the Bodleian MS. of St. Jerome's version:

**LXXVIII Olymp.**

_Herodotus hi toriurum

scriptor agnos. Eusebius et Diag.

oros atnus

sermonem plurimo celeb.

braturn

Zeuxis pictor agnosic.

Eusebius, in 15th year of Xerxes, King of Persia, the 36th of an Alexander, King of Macedonia, the beginning of the seventy-eighth Olympiad, and the 1549th year of Abraham. In this MS. the years of Abraham are given at the commencement of every decade. Thus, in the last line, the first year (MDL) marks the opening of a new decade; while the second (XVIII) shows the continuation of the reign of Xerxes.

Which of the two versions of the "Chronicle" is the more trustworthy as regards dates and figures is a question that was conclusively answered in favor of the Latin version by Lightfoot in his exorcures, "The Early Roman Succession". The striking differences between the episcopal lists (notably the Roman) as they are found in the Armenian version, on the one hand, and in the Latin version and "The Church History", on the other hand, give rise to a number of ingenious theories concerning changes made by Eusebius in a later edition of his "Chronicle". Lightfoot annulled these theories by demonstrating the corrupt state of the Armenian version at the upper end of the years, which different events are assigned. It is important to remember this in reading books or articles in which reference is made to the "Chronicle", if they were written before 1890.

**Best Editions.—** (1) "Eusebius Chronicon Libri duo", ed. Schoene, 2 vols., Berlin, 1860-1875; (2) the Bodleian manuscript of Jerome's version of the "Chronicle" of Eusebius reproduced in colotype with an introduction by John Knight Fotheringham, M. A., Oxford, 1903; (3) the Syria epistemes referred to above.

F. J. BACCUS.
garius who erroneously maintained that in the Holy
Eucharist the bread and the wine are merely a figure
or a symbol of the Body and Blood of Christ. That
he was a partisan of Berengarius, at least for a time,
cannot be denied. In a letter written shortly after
the councils of Rome and Verceil (1050), in which
Berengarius was condemned, he protested against the
injustice done to his teacher and the archdeacon of his
church. When King Henry I of France (1031–60)
summoned the bishops of his realm to a synod held in
Paris in 1051, both Eusebius and Berengarius
abstained themselves, through fear of condemnation.
Two contemporary writers, Deodatus, Bishop of
Ligea (d. 1052), and Abbot of Troarn (P. L., CXLIX, 1422), class Eusebius Bruno among the followers of Berengarius; the latter always
claimed him as a partisan. It is not certain that he
really appropriated in its entirety the teaching of his
master, though Deodatus and Durandus affirm it.
On the other hand, at the Council of Tours (1054),
presided over by the papal legate Hilebrand, Euse-
bius Bruno induced his friend Berengarius to declare,
in writing and on oath, that after the consecration
the bread and the wine are the Body and Blood of Christ.
Moreover, at a synod of Angers (1062) at which the
Count of Anjou, Geoffrey the Bearded, asked, for an
account of the teaching of Berengarius, Eusebius’
defence of his master was somewhat weak. When,
shortly after this synod, the King of France
summoned the opposition of a certain Geoffrey Martini to his
teaching, Eusebius declared frankly in a letter to Berengarius
(P. L., CXL VII, 1201), that the reality of the Body and Blood of Christ in the Holy Sacra-
mant must be admitted, like other mysteries of faith, c. g. the Incarnation and the passing of Christ glor-
ified through closed doors. These expressions indicate
either his adherence to the teaching of Eusebius and
what is not unlikely, a misunderstanding, in the begin-
ing, of the real import of the teachings of Berengarius.

Eusebius of Caesarea
eusebius of casarea (eusebius pamphili), bishop of caesarea in palestine, the "father of church history", 4th century.

life.—it will save lengthy digression if we at once
speak of a document which will often have to be re-
ferred to on account of its biographical importance,
viz., the letter written by Eusebius to his diocese in
order to explain his subscription to the creed prop-
ounded by the Council of Nicæa. After some pre-
liminary remarks, the writer proceeds to make a
transmit to his readers a letter which, in the name of the
faith which was put forward by us, and then the second,
which they have published after putting in additions
to our expressions. Now the writing presented by us,
which when read in the presence of our most religious
emperor was declared to have a right and approved
character was as follows: [the faith put forward by us].

as we have received from the bishops before us
both in our first catechetical instruction and when we
were baptized, and as we have learned from the divine
scriptures and as we have believed and taught in the
presbyterate and in the office of bishop itself so now
likewise believing we offer to you our faith and it is
true.

this form follows a formal creed [theodore, hist.,
11; sozomen, hist. i, st. athanasius, de
dyse, sqq.] (appears) and elsewhere by
newman with notes in the oxford library of the
fathers (select treatises of st. athanasius, p. 59)
and st. athanasius, vol. i. the translation
here given is dr. hort’s. the words in brackets are probably
genuine though not given by sozomen and
st. athanasius. dr. hort in 1876 (“two dissertations”, etc., pp. 56 sqq. pointed out that the letter was not a letter of the church of caesarea of which eusebius was bishop.
this view is widely accepted (cf. lightfoot, art. “euseb,” in “dict. of christian biog.”—all refer-
ences to lightfoot, unless otherwise stated, are to
this article.—sunday, “journal of theolog. studies”, vol. i, p. 15; gwatkin, “studies of arnabos”, p. 12;
“addition, mcgill”, “prolog. to c. h. of euseb.” in
“select. libr. of nic.”, vol. ii, p. 22; duchesne, “histoire de l’eglise”, vol. ii, p. 119). ac-

concerning to this view it is natural to regard the
introduction, “as we have received” etc., as autobio-
graphical, and to infer that eusebius had exercised the
office of the priesthood in the city of caesarea before he
became its bishop, and had received his earliest reli-
gious instruction and the sacrament of baptism also.
but other interpretations of this document are
given, one of which destroys, while the other dimin-
ishes, its biographical value: (a) according to some

whole in keeping with the age of cyril. it may be
noted, however, that the biographer of eusebius ex-
pressly states that the cyril in question is the great
opponent of nestorius. various solutions of the dif-

Eusebius who lived in the fifth cen-
tury, it has been objected that neither the name of
Eusebius, nor that of his successor Alexander, appears
in the list of the occupants of that ancient see. Dio-
curus is mentioned as the immediate successor of
Cyril. nor does the style of the homilies seem on the
the creed proffered by Eusebius was drawn up as a formula to be subscribed by all the bishops. It was they who were to say that it embodied what they had been taught as catechumens and had taught as priests and bishops. This seems to have been the view generally held before Hil. and was Kattenbusch's view as embodied in his own justification of the symbol. It is also the one which is widely believed and taught.

According to this interpretation the preliminary statement still remains autobiographical; but it merely informs us that the writer exercised the office of priest before he became a bishop. This interpretation has been adopted by Kattenbusch in his second volume (p. 230) published in 1900. One of the reasons which he gives for his choice of view is that when he was preparing his first volume he used Socrates, who does not give the superscription which we have printed in brackets. It is a vital matter with writers of the school of Kattenbusch not to accept what seems the natural interpretation of Eusebius's words, viz., that the creed he read before the council was actually the one he had already and quite outstandingly used for his own church; viz., "quote Dr. Sunday, "I cannot but think that the theory of Kattenbusch and Harnack [viz., that the Eastern creeds were daughters of the early Roman creed, and this latter did not reach the East till about A.D. 272] breaks down altogether. Bishop Lightfoot ..., puts the birth of Eusebius about 260 A. D., so that he would be something like twelve years old when this incident in the affairs of Antioch. In other words he was in all probability already baptized, and had already been catechized in the Cappadocian creed at a time when, in the Kattenbusch-Harnack hypothesis, the parent of that creed had not yet reached Antioch—much less Cessarea or Jerusalem" (Journ. Th. Studies, I, 15).

The passage just quoted shows that the date of Eusebius's creed is rather more than a merely curious question. According to Lightfoot, it cannot have been "much later than A.D. 260" (p. 390); according to Harnack, "it can hardly be placed later than 260-265" (Chronologie, I, p. 106). The data from which they argue are the persons and events which Eusebius describes as belonging to "our own time". Thus the passage of Dionysius of Alexandria, he says, he is now going to relate the events of "our own times" (οἰκονομίας). H., II, 7, 26. He then recounts how, at Rome, Pope Dionysius (259-265) succeeded Xystus, and about the same time Paul of Samosata became Bishop of Antioch. Elsewhere (H., II, 5, 28) he speaks of the same Paul as "setting the church on fire in old time" (ἐβοσάτο τὸν Ναοῦ) the heresy of Arians and Meonians.

In 263 he also speaks of the Alexandrian Dionysius in the same way (H., II, 33, 2). He calls Manes, whom he places (H., II, 36, 31) during the episcopate of Felix (270-274), "the maniac of yesterday and our own times" (Theophania, IV, 39). An historian might of course refer to events recent, but before his own birth, as belonging to "our own time"; e.g. a maniac might refer to the Franco-Prussian war in 1870. But the reference to Manes as "the maniac of yesterday" certainly suggests a writer who is alluding to what happened within his own personal recollection.

Concerning Eusebius's parenthetical we know absolutely nothing, but the fact that he escaped with a short term of imprisonment during the late Diocletian persecution, when his master Pamphilus and others of his companions suffered martyrdom, suggest that he belonged to a family of some influence and importance. His relations, later on, with the Emperor Constantine point to the same conclusion. At some time during the last twenty years of the third century he visited Antioch, where he made the acquaintance of the priest Dorotheus, and heard him expound the Scriptures (H., VIII, 32). By a slip of the pen or the memory Lightfoot (p. 199) makes Dorotheus a priest of the Church of Cessarea. In 296 he saw for the first time the future Emperor Constantine, as he passed through Palestine in the company of Diodorean (Vita Const., I, 19).

At a date which cannot be fixed Eusebius made the acquaintance of Pamphilus, the founder of the magnificent library of which he became the most distinguished bishop. In 313, Pamphilus took upon himself the great charge of the Church at Rome, and endeavored to recall and recover it from the scholasticism of the Alexandrians. This is the last mention we have of Pamphilus in connection with Eusebius, but there is an allusion to the fact that Eusebius had been corrected by the Emperor Constantine. (Chron. 331, 12). This is the last mention we have of Pamphilus in connection with Eusebius, but there is an allusion to the fact that Eusebius had been corrected by the Emperor Constantine. (Chron. 331, 12).

The following was transcribed from a copy of the Father Apollinarius the Ciconiobiiarch, to which these words are subjoined: "It was transcribed from the editions of the Hexapla and was corrected from the Tetrapla of Origen himself which also had been corrected and furnished with scholia in his own handwriting; whence I, Eusebius, added the scholia, Pamphilus and Eusebius corrected." (Swete, vol. II, p. 212).

(2) At the end of the Book of Esdras, in the codex Sinaiticus, there is the following note—:

"It was compared with a very ancient copy that had been corrected by the hand of the blessed martyr Pamphilus to which is appended in his own hand this subjoined correction: thereby the copies of the emblems of Hexapla of Origen himself which also had been corrected and furnished with scholia in his own handwriting, whence I, Eusebius, added the scholia, Pamphilus and Eusebius corrected." (Swete, vol. II, p. 212).

(3) The same codex and also the Vatican and Alexandrine quote a colophon like the above, with the difference that Antoninus has become a confessor, and Pamphilus is in prison—"Antoninus the confessor compared, Pamphilus corrected." The volume to which this colophon was subjoined began with I Kings and ended with Esther. Pamphilus was certainly not idle in prison. To most of the books in the Syro-Hexaplor is subjoined a note to the effect that they were translated from the Hexapla in the library of Cessarea and compared with a copy subjoined. I, Eusebius, added the scholia, and Pamphilus corrected." (Harnack, "Altchristl. Lit.", pp. 453, 454).

May not the confessor Antoninus be the same person as the priest of that name who, later on, with two companions interrupted the governor when he was on the point of sacrificing, and was beheaded? (Marti, Pat., 9.) One member of Pamphilus's household, Appian, had done the same a few years before; and another, Eusebius's father, had been imprisoned by Diocletian, on obtaining his release provoked martyrdom at Alexandria by going before the governor and rebuking him. Towards the end of 307 Pamphilus was arrested, horribly tortured, and consigned to prison.
Besides continuing his work of editing the Septuagint, he wrote, in collaboration with Eusebius, a Defence of Origen which was sent to the confessors in the mines—a wonderful gift from a man whose sides had been curried with iron combs, to men with their right eyes burned out and the sinews of their left legs cauterized. Early in 308 Pamphilus and several of his disciples were beheaded. Out of devotion to his memory Eusebius called himself Pamphilus, meaning, probably, that he wished to be regarded as the bondman of him whose name “it is not meet that I should mention without styling him my lord” (Mart. Pal., ed. Cureton, p. 37). Mr. Gifford, in the introduction to his translation of the “Prep. Evang.,” has suggested another explanation on the authority of an ancient scholiast listening from Caesarea which calls Eusebius the “son of Pamphilus.” He argues further that Pamphilus, in order to make Eusebius his heir, took the necessary step of adopting him.

During the persecution Eusebius visited Tyre and Egypt and witnessed numbers of martyrs (H. E., VIII, vii and ix). He certainly did not shun danger, and was at one time a prisoner. When, where, or how he was captured, or why, no one seems to know. An indignant bishop, who had been one of his fellow-prisoners and “lost an eye for the Truth,” demanded at the Council of Tyre how “he came off scathless.” To this taunt—it was hardly a question—made under circumstances of great provocation, Eusebius deigned no reply (Epphan., Ier., lxviii, 8; cf. St. Athanas., Apol. e. Arian.; vili, 1). He had made his point. The Tyreans had been a bit too seriously made—the best proof that it could not have been sustained. We may assume that, as soon as the persecution began to relax, Eusebius succeeded Pamphilus in the charge of the college and library. Perhaps he was ordained priest about this time. By 315 he was already a bishop, for he is present in that council, which decided that the dedication of a new church at Tyre, which occasion he delivered a discourse given full in the last book of the Church history.

Alexander, Bishop of Alexandria, excommunicated Arius about the year 320. The Arians soon found that for all practical purposes Eusebius was on their side. He wrote to Alexander charging him with misrepresenting the teaching of the Arians and so giving them courage to continue in their error. “It also grieves me greatly that you offer me no pleasure” (see below). A portion of this letter has been preserved in the Acts of the second Council of Nicaea, where it was cited to prove that Eusebius was a heretic. He also took part in a synod of Syrian bishops who decided that Arius should be restored to his former position, but on his side he was to obey his bishop and continually treat peace and communion with him (Soz., H. E., I, 15). According to Duchesne (Hist. de l’Eglise, II, 132), Arius, like Origen before him, found an asylum at Caesarea. At the opening of the Council of Nicaea Eusebius occupied the first seat on the right of the emperor, and delivered the inaugural address which was couched in a strain of thanksgiving to Almighty God on his, the emperor’s, behalf? (Vit. Eus., xiv, 30). At Ty he evidently enjoyed great prestige and may not unreasonably have expected to be able to steer the council through the via media between the Seylla and Charybdis of “Yes” and “No.” But if he entertained such hopes they were soon disappointed. We have already spoken of the profession of faith which he brought forward to vindicate his own orthodoxy, or perhaps in the hope that the council might adopt it. It was, in view of the actual state of the controversy, acolourless, or what at the present day would be called a comprehensive, formula. After some delay Eusebius subscribed to the uncompromising creed drawn up by the council, making no secret, in the letter which he wrote to his own Church, of the non-natural sense in which he accepted it. Between 325 and 330 a heated controversy took place between Eusebius and Eustathius, Bishop of Antioch. Eustathius accused Eusebius of tampering with the faith of Nicaea; the latter retorted with the charge of Sabellianism. In 331 Eusebius was among the bishops who, at a synod held in Antioch, deposed Eustathius. He was offered and refused the vacant see. In 334 and 335 he took part in the campaign against St. Athanasius at the synods held in Caesarea and Tyre respectively. From Tyre the assembly of bishops were summoned to Jerusalem by Constantine, to assist at the dedication of the basilica he had erected on the site of Calvary. After the dedication they restored Arius and his followers to communion. From Jerusalem they were summoned to Constantinople (336), where Marcellus was condemned. The following year, Constantine died. Eusebius survived him long enough to write his history and two treatises against Marcellus, but by the summer of 341 he was already dead, since it was his successor, Acaicus, who assisted as Bishop of Caesarea at a synod held at Antioch in the summer of that year.

WRITINGS.—We shall take Eusebius’ own writings in the order given in Harnack’s “AlchristLit.,” pp. 534 sqq. He wrote his History of the Christian Church from the creation to the末- of the Constantine period (Vit. Eus., xvi, 1). The work was referred to by Eusebius, of which only a single fragment, describing Pamphilus’ liberality to poor students, quoted by St. Jerome (c. Ruffin., I, ix), survives. (2) A collection of Ancient Martyrdoms, used by the compiler of Wright’s “Syria Martyrology,” also lost. (3) On the Martyrs of Palestine. There are two distinct forms of this work, both drawn up by Eusebius, one of which was compiled by Pamphilus, who was the secretary of Bishop Pamphilus of Caesarea, and which was first edited and translated by Cureton in 1861. The shorter form is found in most MSS. (not, however, in the best) of the Church History, sometimes at the end of the last book, generally between books VIII and IX, also in the middle of book VII. The existence of the same work in two different forms casts no serious doubt upon a literary theory of certain MSS. and is, of course, the question of priority. Here, with two notable exceptions, scholars seem to agree in favour of the longer form. Then comes the question, why Eusebius abridged it and, finally, how the abridgment found its way into the Church History. The shorter form lacks some introductory remarks, referred to in e. xiii, which defined the scope of the work. We think that it is possible that Eusebius may have “recorded the palinode” of the persecutors. It seems probable that part of the missing conclusion is extant in the form of an appendix to the eighth book of the Church History found in several MSS. This appendix contrasts the miserable fate of the persecutors with the good fortune of Constantine and his father. From these data Lightfoot concludes that what we now possess formed “part of a larger work in which the sufferings of the Martyrs were set off against the deaths of the persecutors.” It must, however, be remembered that the missing parts would not add much to the book. So far as the martyrs are concerned, it is evidently complete, and the fate of the persecutors would not take long in the telling. Still, the missing conclusion may exist in another place, or the body of the Martyrs. The book, in both forms, was intended for popular reading. It was therefore desirable to keep down the price of copies. If this was to be done, and new matter (i.e. the fate of the persecutors) added, the old matter had to be somewhat curtailed. In 1894, in the Theologische Literaturzeitung (p. 465) Preuschen threw out the idea that the shorter form was merely a rough draft not intended for publication. Bruno Violet, in his “Die Palastinischen Martyrer” (Texte u. Untersuch., XIV, 4, 1896) followed up this idea and pointed out that, whereas the longer form was constantly used by the compilers of Martyrologies, Menologies, and the like, the shorter form was never used. In a review of Violet (Theolog. Litt., 1897, p. 300), Preuschen returns to his original
idea, and further suggests that the shorter form must have been joined to the Church History by some copyist who had access to Eusebius’s MSS. Harnack (Chronologie, 11, 115) holds to the priority of the longer form, but he thinks that the shorter form was composed almost at the same time for readers of the Church History.—(1) The Chronicon (see separate article, Eusebius, CHRONICLE OF).—(5) The Church History as a whole seems to be the result of a compilation which post-Gibbon’s celebrated work, about Tertullian or St. Cyprian is due, no doubt, to his scanty knowledge of Latin; but in the case of a Greek writer, like Hippolytus, we can only suppose that his works somehow failed to make their way to the libraries of the East. Eusebius’s good faith and sincerity has been amply vindicated by Lightfoot. Gibbon’s celebrated sneer, about Eusebius quoting whatever might redound to the glory, and that he has suppressed all that could tend to the disgrace, of religion”, can be sufficiently met by referring to the passages (II. E., VIII. ii, iii; Mart. Pal. c. 12) on which it is based. Eusebius does not “indirectly confess”, but openly avows, that he passes over certain scandals, and he enumerates them in the first place. That he did not suppress passages, (through not this) were introduced into the text of Josephus long before his time (see Orig. c. Cels., 1, 47, Delarue’s note) no suspicion can justly attach to Eusebius himself. Another interpolation in the Jewish historian, which he quotes elsewhere (II. 23, 29), was certainly known to Origen (I. c.). Doubtless also the omission of the owl in the account of Herod Agrippa’s death (II. E., 11, 10) was already in some texts of Josephus (Ant., XIX, 8, 2). The manner in which Eusebius deals with his numerous quotations elsewhere, where we can test his honesty, is a sufficient vindication against this unjust charge (L., p. 325).

The notices in the Church History bearing on the New Testament Canon are so important that a word must be said about them. Eusebius’s works, actually composed during the stress of the persecution of 303–306, when he was imprisoned and what he left unrecorded. Speaking generally, his principle seems to have been to quote testimonies for and against those books only whose claims to a place in the Canon had been disputed. In the case of undisputed books he gave any interesting information concerning their composition which he had come across in his reading. The subject was most carefully investigated by Lightfoot in an article in “The Contemporary” (January, 1875, reprinted in “Essays on Supernatural Religion”), entitled “The Silence of Eusebius”. In regard to the Gospel of St. John, Lightfoot concludes: “The silence of Eusebius respecting early witnesses to the Fourth Gospel is an evidence in its favour. For the episcopal lists in the Church History, see article on the Chronicle. The tenth book of the Church History records the defeat of Licinius in 323, and must have been completed before the death and disgrace of Crispus in 326, for it refers to him as Constantine’s “most pious son”. The ninth book was compiled between the defeat of Maxentius in 312, and Constantine’s first rupture with Licinius in 311.

(6) The Life of Constantine, in four books. This work has been most unjustly blamed, from the time of Harnack downwards, to be a panegyric rather than a history. If ever there was a man under an obligation to respect the maxim, De mortuis nil nisi bonum, this man was Eusebius, writing the Life of Constantine within three years after his death (337). This Life is especially valuable because of the account it gives of the Council of Nicaea and the earlier phases of the Arian controversy. It is true that some of our chief sources of information for the history of that council is a book written to magnify Constantine.

B. Apologetic.—(7) Against Hierocles. Hierocles, who, as governor in Bithynia and in Egypt, was a cruel enemy of the Christians during the persecution, before the persecution had attacked them with the pen. There was nothing original about his work, except the use of a very great number of Arian interpolations, and of the repetition of the same charge over and over. One of our chief sources of information for the history of that council is a book written to magnify Constantine.

A. Apologetic.—(8) Against Porphyry”, a work in twenty-five books of which not a fragment survives.—(9) The “Praeparatio Evangelica”; in fifteen books.—(10) The “De vita et moribus Christianorum” (11), the chief book of Eusebius’s. This book is divided into the first of the ten: the history of the Church during the first five hundred years, the other nine, the history of the Church from the time of Constantine down to the death of Constantius Chlorus. The following summary of its contents is taken from Mr. Gifford’s introduction to his translation of the “Praeparatio”: “The first three books discuss the threefold system of Pagan Theology, Mythical, Allegorical, and Political. The next three, IV-VI, give an account of the chief oracles, of the worship of demons, and of the modes of paganism. Books VII-VIII focus on the doctrines of Fate and Free Will. Books VII-IX give reasons for preferring the religion of the Hebrews founded chiefly on the testimony of various authors to the excellence of their Scriptures and the truth of their history. In Books X-XII Eusebius argues that the Greeks had borrowed from the older theology and philosophy of the Hebrews, dwelling especially on the supposed dependence of Plato upon Moses. In the last three books the comparison of Moses with Plato is continued, and the mutual contradictions of other Greek Philosophers, especially the Peripatetics and Stoics, are exposed and criticized.”

The “Praeparatio” is a gigantic feat of erudition, and, according to Harnack (Chronologie, II, p. 129), the most complete of Eusebius’s works, actually composed during the stress of the persecution of 303–306, with the Chronicon, second only to the Church History in importance, because of its copious extracts from ancient authors whose works have perished. The first book of the Demonstratio chiefly deals with the temporary character of the Mosaic Law. In the next three the prophetic既能 one of the revolutions of the Gentiles and the rejection of the Jews are discussed. In the remaining eight the testimonies of the prophets concerning Christ are treated of.

We now pass to three books, of which nothing is known save that they were read by Photius, viz. (11), The “Praeparatio Ecclesiastica” (12), the “Demonstratio Ecclesiastica”, and (13) Two Books of Object and Defence, of which, from Photius’s account, there seem to have been two separate editions. (14)
The “Theophania” or “Divine Manifestation”. Except for a few fragments of the original, this work is only extant in a Syriac version discovered by Tattiana, edited by Roblo in 1832 and translated by the same in 1843. It treats of the cosmic function of the Word, the nature of man, the need of revelation, etc. The fourth and fifth books are particularly remarkable as a kind of anticipation of modern books on Christian evidences. A curious literary problem arises out of the relations between the Theophania and the works of St. John, especially the Catenae. The parallel passages which are almost verbatim in both works. Lightfoot decides in favour of the priority of the first-named work. Gressel, who has edited the “Theophania” for the Berlin edition of the Greek Fathers, takes the opposite view. He compares the parallel passages and argues that they are improved in the “De Laudibus Constantini:” (15) “On the Numerous Progeny of His Ancients.” This work is referred to by Eusebius twice, in the “Praepar. Ev.” VII, 8, and in the “Dom. Ev.” VII, 8; and also (Lightfoot and Harnack think) by St. Basil ("De Spir. Sanct.", xxix), where he says, "I draw attention to his [Eusebius'] words in discussing the difficulties started in connexion with ancient polygamy." Arguing from this parallel, Lightfoot thinks that this treatise Eusebius dealt with the difficulty presented by the Patriarchae possessing more than one wife. But he overlooked the reference in the “Dem. Ev.”, from which it would appear that the difficulty dealt with was, perhaps, a more general one, viz., the contrast presented by the desire of the Patriarchae for a numerous offspring and the honour in which continental monarchs were held by the Church.

C. Eccegetical. (16) Eusebius narrates, in his Life of Constantine (IV, 36, 37), how he was commissioned by the emperor to prepare fifty sumptuous copies of the Bible for use in the Churches of Constantinople. Some scholars have supposed that the Codex Santiuosus was one of these copies. Lightfoot rejects this view entirely on the ground of the Text of the Gospels in many respects differs too widely from the readings found in Eusebius".—(17) Sections and Canons. Eusebius drew up ten canons, the first containing a list of passages common to all four Evangelists; the second, those common to the first three and so on. He also divided the Gospels into sections numbered continuously. A number, against a section, referred the reader to the opening of that Text of the Gospels. The canons were of main importance, for they were added to the copies of the Gospels printed in the codex form and were widely used. The canons are not extant. (18) The labours of Pamphilus and Eusebius in editing the Septuagint have already been spoken of. They "believed (as did St. Jerome nearly a century afterwards) that Origen had succeeded in restoring the old Greek version to its primitive purity". The result was a "miscellaneous mixture of the Alexandrian version with the versions of Aquila and Theodotion" (Svetoe, “Intro. to O. T. in Greek”, pp. 77, 78). For the labours of the two friends on the text of the N. T. the reader may be referred to Bousset, “Textcritische Studien zum N. T.”, c. ii. Whether as in the case of the Old Testament, they worked on any definite critical principles is not known. (19) The labours of Eusebius in editing the New Testament, and especially the practice of adding parenthetical passages in the Hebrew Scriptures; (b) Chronography of Ancient Judæa with the Inheritance of the Ten Tribes; (c) A plan of Jerusalem and the Temple; (d) On the Names of Places in the Holy Scriptures. These four works were written at the request of Eusebius's friend Paulinus. Only the fourth is extant. It is known as the "Topica" or the "Onomasticon."—(20) On the nomenclature of the Book of the Prophets. This work gives a short biography of each Prophet and an account of his prophecies.—(21) Commentary on the Psalms. There are many gaps in the MSS. of this work, and they end in the 118th Psalm. The missing portions are in part supplied by extracts from the Catena. An allusion to the discovery of the Holy Sepulchre fixes the date at about 330. Lightfoot speaks very highly of this commentary.—(22) Commentary on Isaiah, written after the persecution. (23 to 32) Commentaries on other books of Holy Scripture, of some of which what may be extracts are preserved. (29) Commentary on St. Luke, of which what seem to be extracts are preserved.—(30) Commentary on I Cor., the existence of which seems to be implied by St. Jerome (Ep. xlix).—(31) Commentary on Hebrews. A passage that seems to belong to such a commentary was published by Mai in 1825. Extracts from the original are preserved. Of the two parts, the first, dedicated to a certain Stephen, discusses questions respecting the genealogies of Christ; the second, dedicated to one Marinas, questions concerning the Resurrection. The Discrepancies were largely borrowed from by St. Jerome and St. Ambrose, and have thus indirectly exercised a considerable influence on Biblical studies.—(32) General Elementary Introduction, consisting of ten books, of which VII–IX are extant under the title of "Prophetic Extracts". These were written during the persecution. The importance of this work is increased by the publishing books. "This work seems to have been a general introduction to theology, and its contents were very miscellaneous as the extant remains show" (L., p. 339).

D. Dogmatic. (34) The Apology for Origen. This work has already been mentioned in connexion with Pamphilus. It consisted of six books, the last of which was added by Eusebius. Only the first book is extant, in a translation by St. Syncellus, to the name of Marcellus, Bishop of Ancyra", and (39) "On the Theology of the Church", a refutation of Marcellus. In two articles in the "Zeitschrift für die Neueste. Wissenschaft" (vol. IV, pp. 330 sqq. and vol. VI, pp. 250 sqq.), written in English, Prof. Conybeare has maintained that our Eusebius could not have been the author of the "On the Church". These arguments are rejected by Prof. Klostermann, in his introduction to these two works published in 1905 for the Berlin edition of the Greek Fathers. The “Contra Marcellum” was written after 330 to justify the action of the synod held at Constantinople when Marcellus was deposed; the "Theology" a year or two later. (37) "On the Paschal Festival" (a mystical interpretation). This work is not extant. (36) "On the Holy Spirit", first of the Ten Books. A fragment of this work was published in 1842, and translated into English by H. E. Lee, 1842. (35) "On the Passion of the Martyrs" (a mystical interpretation). This is not extant. (38) A treatise against the Manicheans is perhaps implied by Epiphanius (Hær., liv, 21).

E. Orations and Sermons. (39) At the Dedication of the Church in Tyre (see above).—(40) At the Vicennalia of Constantine. This seems to have been the opening address delivered at the Council of Nicaea. It is not extant.—(41) On the Sepulchre of the Saviour, A. D. 325 (Vit. Const., IV, 33) not extant.—(42) At the Vicennalia of Constantine. This work is generally known as the "De Laudibus Constantini". The second part (11–18) seems to have been a separate oration joined on to the Vicennalia. —(43) "In Praise of the Martyrs". This oration is preserved in the same MS as the "Theology of the Church". It was published and translated in the "Journal of Sacred Literature" by Mr. H. B. Cowper (New Series, V, pp. 403 sqq. and ibid. VI, pp. 129 sqq.).—(44) On the Failure of Rain, not extant.

F. Letters.—The history of the preservation of the three letters, (15) to Alexander of Alexandria, (16) to Emperor, or Emperor, (17) to the Empress Constan-
portions from the letters to Alexander and Euphrasius to prove that Eusebius "was delivered up to a rep- roach being one of those who followed the Arian superstition" (Lable, "Conc.", VIII, 1143-1147; Mansi, "Conc.", XIII, 313-317). Besides the passage quoted in the council, other parts of the letter to Constans are extant.—(18) To the Church of Caesarea after the Council of Nicea. This letter has already been described.

F. J. Bacchus.

Eusebius of Doryleum, Bishop of Doryleum in Asia Minor, was the prime mover on behalf of Catholic orthodoxy against the heresies of Nestorius and Eutyches. During the earlier part of his life he followed the profession of an advocate at Constantinople, and was already known as a layman of considerable learning when he protested publicly (123) against the erroneous doctrine of a discourse delivered by Anastasius, the syneculus, or chaplain, of Nestorius. Shortly afterwards he again bore public witness against the Nestorian heresy as to the nature of Christ, this time during a discourse by Nestorius himself, in which he interrupted with the exclamation that "the eternal Word had undergone a second generation"—i.e. of a woman, according to the Nestorians. Nestorius had thus applied arguments against the "second generation".

After the Council of Ephesus (431), at which the teaching of Nestorius had been condemned, a document attributed by general consent to Eusebius was made public, in which the doctrine of Nestorius was shown to be identical with that of Paul of Samosata. Eusebius had at some period conversed with Eutyches, founded, we may fairly conjecture, on their common opposition to Nestorian error. But when Eutyches allowed himself to be betrayed into opinions which, though directly opposed to those of Nestorius, were equally contrary to the faith of the Church, Eusebius, now Bishop of Doryleum, was no less zealous against his former friend than he had been against their common opponent. After repeated attempts at persua- sion, Eusebius brought a formal charge of false teach- ing against Eutyches, before Flavian, who was then (448) presiding over a synod at Constantinople. Flav- ian was reluctant to proceed against Eutyches, and urged Eusebius to renounce with him privately once more. Eusebius, however, refused, saying that he had been repeatedly consulted on the case, and that his advice had met with no response. He declared that he had not received the order to leave his monastery and pleading distrust of Eusebius, whom he now looked upon as his enemy. At last, however, he came, attended by a large escort of soldiers and monks. He was intercepted by Eusebius, who, in the meantime had been strongly pressing his case, and who now, as he said, felt some alarm lest Eutyches should succeed in evading con- demnation and retaliate upon his accuser by obtaining a decree of banishment against him. Eutyches, however, was condemned and deposed; he immediately wrote a letter to the pope, complaining of Eusebius's proceedings, which he attributed to the instigation of the devil.

In the following year (449) at Constantinople, an examination was held, by imperial authority, of the acts of the synod which had condemned Eutyches, which acts he alleged to have been falsified. Eutyches was represented by three doctors: Eusebius, who wished to withdraw but was not permitted to do so, urged that the doctrinal question should not be con- sidered on that occasion, but should be remitted to a general council. On the assembly of the council then summoned at Ephesus (see Eusebius, Rorimer Coun- cil of), Eusebius was forcibly excluded by the influ- ence of Dioscurus of Alexandria, who had obtained the support of the emperor. The reading of his part in the synod at Constantinople provoked an outburst of rage against him. On the first day of the council, he was ordered to be bound, with the words, "Burn him! As he has divided so let him be divided!" Flavian and Eusebius were deposed and banished, and Flavian only survived for three days the physical injuries he had received in the tumultuary council. Eusebius wrote to the Emperors Valentinian and Mar- cian, asking for a fresh hearing; and both Eusebius and Flavian sent written appeals to Rome. The text of the appeal was discovered in 1878. Among those who was then curator of the Ambrosian Library at Milan and afterwards became Abbot of Monte Cassino—and was published by him in 1882. Eusebius grounds his appeal on the fact of his having been condemned un- heard, and prays the pope to quench the question (pronuntiate evaucari et imnem fieri meam iniquam condemnationem); he also mentions a written appeal given by him to the papal legates at Ephesus, in which he had begged the Holy See to take cognizance of the matter (in quibus vestra sedis cognitionem popose). Eusebius fled to Rome, where he was kindly received by Leo I. In two letters written on the same day (13 April, 451) to Pulcheria and Anastasius, the pope bespeaks their good offices for Eusebius in the matter. The Emperor Marcian, after the Disciples of Dory- leum was being thrown into disorder by an intruder (quum dicitur vastare qui illi injuste assertur subr- gatus). But Liberatus (Brevarium, c. xii) says that no one was put in Eusebius's place, and the report was therefore probably of merely local origin.

Eusebius took part in the Council of Chalcedon, at which he accused the Bishop of Rome, who seemed to him to be opposed to the condemnation of the Nestorians, of having been a party to the banishment of Eutyches. He was one of the commission which drew up the definition of faith finally adopted. The council annulled his con- demnation, and made special mention of the fact in the letter to the pope in which it sought its confirm- ation of its acts. The rescript of the Emperor Marcian (451), issued to clear the memory of Flavian, declares the reputation of that and of Eutyches's acquittal. The an- nouncement of the Robber Council (injusta sententia nihil obit Eusebio). He was one of the bishops who signed the 28th canons of Chalcedon giving patriarchal rights over Pontus and Asia to Constantinople. When the papal legates demurred to the passing of the canons in their absence, and the signatories of the region affected were asked to declare whether they had signed the canons, some twenty bishops, according to Leontius, signed the canons only because, when in Rome, he had read the canons to the pope, who had accepted it. Though he was doubtless mistaken as to the fact alleged (how the mistake arose cannot now be determined), his professed motive is significant. His name appears among the signatures to the acts of a council held in Rome in 503, but it seems improbable that he was alive at that date. TheExistence of the Fifth Synod of Constantinople, which Kircher, Pratius, and Valesius supposed to be one of the great councils, is now generally held as a mistake. According to Eusebius's account of some of the bishops who had attended Chalcedon, under the name of the Bishop of Rome, Leo I., at the two (Amelli) Letters (Cambridge, 1809), and the two (Amelli) Letters (Cambridge, 1809), and A. B. Sharp.
EUSEBIUS

Eusebius of Laodicea, an Alexandrian deacon who had some fame as a confessor and became Bishop of Laodicea in Syria, date of birth uncertain; d. about 268. His story is told by Eusebius of Caesarea (Hist. Eccl., VII, xi and xxxii). As deacon at Alexandria he had accompanied his bishop, Dionysius (with a priest, two other deacons, and two Romans who were then in Egypt) before the tribunal of Amilian, Prefect of Egypt, at the time of the Emperor Valerianus (253–260). Dionysius had written himself a circular letter addressed to a certain Bishop Germanus (Eus., Hist. Eccl., VII, xi). They were all sentenced to banishment, but Eusebius managed to remain in the city in hiding, "zealously served the confessors in prison and buried the bodies of the dead and of the blessed martyrs, not without danger to his own life" (ibid.). In 260 there broke out the great siege of Laodicea, and at that time a plague ravaged the city. Eusebius again risked his life continually by nursing the sick and the wounded (ibid., VII, xxxii). The Romans besieged a part of the town (Bruchium, Περιφρόκτου, Περιφράκτου). Anatolius, Eusebius' friend, was among the besieged, Eusebius himself outside. Eusebius went to the Roman general and asked him to allow anyone who would to leave Bruchium. His petition was met with a charge against Anatolius, with whom he managed to communicate, explained the matter to the leaders of the rebellion and implored them to capitulate. They refused, but eventually allowed the women, children, and old men to profit by the Romans' mercy. A great crowd then came to surrender at the Roman camp. "Eusebius thereupon delivered the church to Laodicea, with every care and attention as a father and a physician" (ibid., VII, xxxii). In 261 Dionysius (who seems to have come back from banishment) sent Eusebius as his legate to Syria to represent him at the discussions that were taking place concerning the affair of Paul of Samosata. Anatolius accompanied his friend. The Syrians were so impressed by these two Egyptians that they kept them until 268. Eusebius was elected Bishop of Laodicea as successor to Socrates. Not long afterwards he died and was succeeded by Anatolius. The date of his death is uncertain. Harck thinks it was before the great Synod of Antioch in 268 (Chron. der alchrist. Litt., I, 34). Another theory is that the siege at Alexandria was in 269, that the friends went to Syria at the end of 269, and that Eusebius was still alive in 279 (so W. Reading in the Variorum notes to his edition of Eusebius Pamph., Cambridge, 1720, I, 367). Gams puts his death in 270 (Kirchenlexikon, s. v. Eusebius von Laodicea). Eusebius' name does not occur in the acts of the Synod of 268.

ADRIAN FORTESCUE.

Eusebius of Nicomedia, Bishop, place and date of birth unknown; d. 341. He was a pupil, at Antioch, of Lucian the Martyr, in whose famous school he learned his Arian doctrines. He became Bishop of Berytus; afterwards Bishop of Caesarea, where he was well received by the famous apologist and historian Eusebius, and wrote to Eusebius of Nicomedia for support. The letter is preserved. In it the heretic explains his views clearly enough, and appeals to his correspondent as to a "fellow Lucianist". Eusebius put himself at the head of the party, and wrote many letters in support of Arians. One is preserved, addressed to Paulinus, Bishop of Tyre. We learn from it what Eusebius' doctrine was at this time: the Son, he says, is "not generated from the substance of the Father", but he is "other in nature and power"; He was created, and this is inconsistent with His Sonship, for the wicked are called sons of God (Is., I, 2; Deut., xxxii, 18) and so are even the drops of dew (Job, xxxix, 28); He was begotten by God's free will. This is pure Arianism, borrowed from the letters of Arius himself, and possibly more definite than the doctrine of St. Lucian. The case of Eusebius is interesting, as he was called on to address a circular to all bishops. He had hoped, he says, to cover the matter in silence, "but Eusebius, who is now at Nicomedia, considering the Church's affairs to be in his hands, because he has not been condemned for having left Berytus and for having coveted the Church of Nicomedia, is the leader of these apostates, whose names I will not mention, and they are giving him all support, in order that he may seduce some of the ignorant into this disgraceful heresy... If Eusebius should write to you, pay no attention?" Eusebius replied by assembling a council in his own province, which begged all the Eastern bishops to communicate with Arius, and to use their influence with Alexander in his favour. At the request of Arius, Eusebius of Caesarea and Eusebius of Nicomedia manage to return to the Church which he had governed in Alexandria.

The situation changed when Constantine had conquered Licinius in 323. The Christian emperor began by comprising Arius and Alexander in a common disapproval. Why could not they agree to differ about subtilities of text? At first it seems to have been so; Alexander wrote a letter in this sense to the patriarch was ineffectual; so Constantine preferred the side of authority, and wrote an angry rebuke to Arius. In the case of the Donatists, he had obtained a decision from a "general" council, at Arles, of all the bishops of his then dominions. He now summoned a larger council, from the world of which his victorious arms had made him master. It met at Nicæa in 325. The bishops were nearly all Easterns; but a Western bishop, Hosius of Cordova, who was in the emperor's confidence, took a leading part, and the pope was represented. Constantine ostentatiously declared that his duty at the council went no further than the guardianship of the bishops, but Eusebius of Caesarea makes it clear that Eusebius of Nicomedia and his friends put forward an Arian confession of faith, but it had only about seventeen supporters from among some three hundred members of the council, and it was hooted by the majority. The formula which was eventually adopted was resisted for some time by the Arian contingent, but eventually all the bishops signed, with the exception of the two Egyptians who had been before excommunicated by Alexander.

Eusebius of Nicomedia had bad luck. Though he had signed the creed, he had not agreed to the condemnation of Arius, who had been, so he said, misrepresented; and after the council he encouraged in their heresy some Arians whom Constantine had involved in Constantine's litigation, and to their conversion. Three months after the council, the Emperor sent him like Arius into exile, together with Theognis, Bishop of Nicæa, accusing him of having been a supporter of Licinius, and of having even approved of his persecutions, as well as of having sent spies to watch himself. But the banishment of the intriguer lasted only two years. It is said that it was Constantia, the widow of Licinius, who induced Constantine to recall Arians, and it is probable that she was also the cause of the return of her old friend Eusebius. By 329 he was in high favour with the emperor, with whom he may have had some kind of relationship, since Ammianus Marcellinus makes him a relative of Julian.

From this time onwards we find Eusebius of Nicomedia at the head of a small and compact party called,
by St. Athanasius, the Eusebius, oi πρωτος τον Ευσηβίον, whose object it was to proceed to the work of Nicea, and to proceed, according to the views of his time, not publicly recall the signatures that had been forced from them. They explained that Aquinas had repented of any excess in his words, or had been misunderstood. They dropped the Nicene formula, as ambiguous. They were the leaders of a much larger party of conservative preslates, who wished to stand well with the emperor, who revered the party Lucian and the great Origen, and were seriously alarmed at any danger of Sabellianism. The campaign opened with a successful attack on Eustathius of Antioch, the principal prelate of the East properly so called. He had been having an animated controversy with Eusebius of Cesarea, in which he had accused that learned personage of polytheism, while Eusebius retorted with a charge of Sabellianism. Eustathius was deposed and exiled, for alleged disrespectful expressions about the emperor's mother, St. Helena, who was greatly devoted to the memory of St. Lucian. It is said that he was also charged with immorality and heresy, but it is certain that the whole case was got up by the Eusebians. The great see of Alexandria was filled in 328 by the preslates, who deposed the Meletians, and made a part at Nicaea. Small in stature, and young in years, he was at the head of a singularly united body of nearly a hundred bishops, and his energy and vivacity, his courage and determination marked him out as the one foe whom the Eusebians had to dread. The Alexandrian Arians had now signed an ambiguous formula of submission, and Eusebius of Nicomedia wrote to Eusebius, to resume his office to reinstate them, adding a verbal message of threats. The Macedonian schism, in Egypt, had only been partially healed by the mild measures decreed at Nicaea, and the schismatics were giving trouble. Constantine was induced by Eusebius to write to Athanasius curtly telling him he should be deposed, if he refused to receive into the Church of Alexandria all Arians and called himself a part of the church. Athanasius explained why he could not do this, and the emperor seems to have been satisfied. Eusebius then joined hands with the Meletians, and induced them to trump up charges against Athanasius. They first pretended that he had invented a tribute of linen garments which he required. This was disproved, but Athanasius was called before the council. The Meletians then brought up a charge which did duty for many years, that he had ordered a priest named Macarius to overturn an altar and break up a chalice belonging to a priest named Ischyros, in the Marcopis, though in fact Ischyros had never been a priest, and at the time alleged could not have pretended to say Mass, for he was ill in bed. It was also said that Athanasius had assisted a certain Philomenus to conspire against the emperor, and had given him a bag of gold. Again the accusers were refuted and put to flight. The saint returned to his Church with a letter from Constantine, in which the emperor sermonized the Alexandrians after his will, urging them to peace and unity. But the question of the broken chalice was answered to this effect that the office of a bishop named Arsenius, whom they kept in hiding while they declared that Athanasius had put him to death; they carried about a severed hand, which they said was Arsenius's, cut off by the patriarch for the purpose of magic. Athanasius induced Ischyros to sign a document denying the former charge, and managed to discover the whereabouts of Arsenius. Constantine in consequence wrote a letter to the patriarch declaring him innocent.

Eusebius had stood apart from all these false accusations, and he was not disheartened by so many failures. He got the Meletians to demand a synod, and represented to Constantine that it would be right for peace to be obtained before the assembling of many bishops, at Jerusalem, to celebrate the dedication of the new Church of the Holy Sepulchre. This was in 335. A synod met at Tyre, whose history need not be described here. Constantine brought some of his kinsmen with him, but they had not been summoned, and were not allowed to sit with the rest. A deputation was sent into the Marcopis to inquire into the question of Ischyros and the chalice, and the chief enemies of Athanasius were chosen for the purpose. The synod was tumultuous, and even the Count Dionysius, who had come with soldiers to support the Eusebius, thought the proceedings unfair. It remains a mystery how so many well-meaning bishops were deceived into condemning Athanasius. He refused to await their judgment. Extricating himself with difficulty from the assembly, he led away his Egyptians and betook himself directly to Constantinople, where he accosted the emperor abruptly, and demanded justice. At his suggestion, the Council of Tyre was ordered to come before the emperor. Meanwhile Eusebius had brought the bishops on to Jerusalem, where the deliberations were made joyous by the reception back into the Church of the followers of Arians. The Egyptian bishops had drawn up a protest, attributing all that had been done at Tyre to a conspiracy between Eusebius and his Arians, and as a result the Church. Athanasius asserts that the final act at Jerusalem had been Eusebius's aim all along; all the accusations against himself had tended only to get him out of the road, in order that the rehabilitation of the Arians might be effected.

Eusebius prevented any of the bishops at Jerusalem from going to Constantinople, save those he could appoint. Constantine of Cäsarea, the Metropolitan of Cæsarea, and the two young Pannonian bishops Ursacius and Valens, who were to continue Eusebius's policy long after his death. They carefully avoided renewing the accusations of murder and sacrilege, which Constantine had already examined; and Athanasius tells us that five Egyptian bishops who had been accused of indulging in new charges, that he had threatened to delay the corn from Alexandria which supplied Constantinople. The emperor was enraged. No opportunity of defence was given, and Athanasius was banished to Gaul. But, in public, Constantine said that he had put in force the decree of the Council of Tyre. Constantine the Younger, however, declared later that his father and lending him money in consequence, had never forgiven him, sending him away, and that before dying he had had the intention of restoring him. The leader of the Meletians, John Arkaph, was similarly exiled. Eusebius wanted him no further, and hence did not care to protect him. One triumph was yet wanting to Eusebius, the reconciliation of Arians, his friend. This was to be consummated at length at Constantinople but the designs of men were frustrated by the hand of God. Arians died suddenly under peculiarly humiliating conditions, on the eve of the day appointed for his solemn restoration to Catholic communion in the cathedral of New Rome.

Until 337 the Eusebians were busily in obtaining, by every means, the place of power. The bishops whom they supported were the Nicene faithful. Of these the best known are Paul of Constantinople, Aselepas of Gaza, and Marcellus, Metropolitan of Ancyra. In the case of Marcellus they had received considerable provocation. Marcellus had been their active enemy at Nicaea. At Tyre he had refused to condemn Athanasius, and he presented a book to the emperor in which the Eusebians received hard words. He was convicted, not without ground, of Sabellianizing, and took refuge at Rome. On 22 May, 337, Constantine the Great died at Nicomedia, after having been baptized by Eusebius, bishop of the place. His brothers and all but two of his nephews were at once murdered, in order to simplify the succession, and the world was divided between his three young sons. An arrangement was
EUSEBIUS

effectuated between them by which all exiled bishops returned, and Athanasius came back to his flock. Eusebius was in reality a gainer by the new regime. Constantius, who was now lord of all the East, was but twenty years old. He wished to maintain the Church, and he seems to have fallen an easy prey to the arts of the old intriguer Eusebius, so that the rest of his foolish and obstinate life was spent in persecuting Athanasius, and in carrying out Eusebius’s policy. Never himself an Arian, Constantius held orthodoxy to be somewhere between Arianism and the Nicene faith. The party of Eusebius, therefore, to some extent, were therefore able to obtain from him a favour, which he denied to the few uncompro- mising Catholics who rejected his generalities.

The see of Alexandria had remained vacant during the absence of Athanasius. Eusebius now claimed to put the Synod of Tyre in force, and a rival bishop was set up in the person of Pitus, one of the Arian priests whom Alexander had long ago excommunicated. Until now the East alone had been concerned. The Eusebians were the first to try to get Rome and the West on their side. They sent to the pope an embassy of two priests and a deacon, who carried with them the decisions of the Council of Tyre and the supposed proofs of the guilt of Athanasius, of which the accused himself said, he was ready to submit to, provided once granting his communion to Pitus, Pope Julius sent the documents to Athanasius, in order that he might prepare a defence. The latter summoned a council of his suffragans. More than eighty attended, and sent to Julius a complete defence of their patri- arech. The arrival of Athanasius’s envoys bearing this letter struck terror into the minds of the Eusebians. The priests fled, and the deacon could think of nothing better than to beg Julius to call a council, and be judge himself. The pope consented, on the ground that in the case of one of the chief Churches such as Alexandria, it was right and customary that the matter should be referred to him. He therefore wrote summoning both accusers and accused to Rome, with the understanding that they should determine the place and time.

Thus it was not Athanasius who appealed to the pope, but the Eusebians, and that simply as a means of withdrawing from an awkward predicament. Pitus was not a success, and Constantius introduced by violence a certain Gregory, a Cappadocian, in his place. Athanasius, after addressing a protest to the whole Church of Rome, sought to escape with his life, and at once made his way to Rome to obey the pope’s summons. His accusers took good care not to appear. Julius wrote again, fixing the end of the year (339) as the term for their arrival. They detained the legates until the fixed time had elapsed, and sent them back in January, 340, with a letter full of studied and ironical politeness, of which Sozomen has preserved us the tenor. He says: “Having as- sembled at Antioch, they wrote an answer to Julius, elaborately worded and rhetorically composed, full of irony, and containing terrible threats. They ad- mitted in this letter that Rome was always honoured as the school of the Apostles, and the metropolis of the Faith from its beginning, although the churches had set up the see from the start. But they thought that they ought not to take a secondary place because they had less great and populous Churches, since they were superior in virtue and intention. They reproached Julius with having communicated with Athanasius, and complained that this was an insult to their synod, and that their condemnation of him was made null; and they urged that this was unjust and contrary to eccle- siastical law. After thus reproaching Julius and com- plaining of ill usage, they promised, if he would accept the deposition of those whom they had deposed, and the appointment of those whom they had ordained, to grant him peace and communion, but if he with- stood their decrees, they would refuse to do so. For they declared that the earlier Eastern bishops had made no objection when Novatian was driven out of the Roman Church, but had no right to debate concepts touching the faith, concerning their arts, which were contrary to the decisions of the Council of Nicæa, saying that they had many necessary reasons to allege in excuse, but that it was superfluous to make any defence against a vague and general suspicion that they had done wrong.” The traditional belief that Rome had been schooled by the Apostles, and had always been the metropolis of the Faith, is therefore here that the Eusebians were denying her right to interfere in the East, in a matter of jurisdiction; for it is to be remembered that neither then, nor at any time, was Athanasius accused of heresy. This claim of independence is the first sign of the breach which began with the foundation of Constantinople as New Rome, and which ended in the complete separation of that city and all its dependen- cies from Catholic communion. For Eusebius had not contented himself with Nicomedia, now that it was no longer the capital, but had managed to get St. Paul of Constantinople exiled once more, and had seized upon that see, which was evidently, in his view, to be set above Alexandria and Antioch, and to be in very deed a second Rome.

The Roman council met in the autumn of 340. The Eusebians were not represented, but many Easterns, their victims, who had taken refuge at Rome, were there from Thrace, Coele-Syria, Phoenicia and Pales- tine, besides Athanasius and Marcellus. Deputies came to complain of the violence at Alexandria. Others explained that many Egyptian bishops had wished to escape, but were prevented from doing so or beaten or imprisoned. At the wish of the council the pope wrote a long letter to the Eusebians. It is one of the finest letters written by any pope, and lays bare all the deceipts of Eusebius, with a clearness which is as unsparing as it is dignified. It is probable that the letter did not trouble Eusebius much, safe as he was in the emperor’s favour. It is true that by the death of Constantine I, Constans, the protector of orthodoxy, had inherited his dominions, and was now far more powerful than Constantius. But Eusebius had never posed as an Arian, and in 341 he had a fresh triumph in the great Dedication Synod of Antioch, where a large number of orthodox and conservative bishops ignored the Council of Nicæa, and showed themselves quite at one with the Eusebian party, though denying that they were followers of Arius, who was not even a bishop.

Eusebius died, full of years and honours, probably soon after the council; at all events he was dead be- fore that of Sardica. He had arrived at the summit of his hopes. He may really have believed Arian doctrine, but clearly his chief aim had ever been his own aggrandisement, and the humiliation of those who had humbled him at Nicæa. He had succeeded. His en- emies were in exile. His creatures sat in the see of Alexandria and Antioch. He was bishop of the imperial city, and the young emperor obeyed his counsels. If Epiphanius is right in calling him an old man even before Nicæa, he must now have reached a great age. His work lived after him. He had trained a group of priests, who carried on his work in the East, and who followed the Court from place to place throughout the reign of Constantius. More than this, it may be said that the world suffers to this day from the evil wrought by this worldly bishop.

John Chapman.
Eustace, **Saint**, date of birth unknown, d. 29 March, 625. He was second abbot of the Irish monastery of Luxeuil in France, and his feast is commemorated in the Celtic martyrologies on the 29th of March. He was one of the first companions of St. Columbanus, a monk of Bangor (Ireland), who with his disciples did much to spread the Gospel over Central and Southern Europe. When Columbanus, the founder of Luxeuil, was banished from the Kingdom of Burgundy, Eustace, one of the bardigers of the royal household, the exiled abbot recommended his community to choose Eustace as his successor. Subsequently Columbanus settled at Bobbio in Italy. Three years after his appointment (613), when Clothaire II became ruler of the triple Kingdom of France, the abbot of Luxeuil was commissioned, by royal authority, to proceed to Burgundy for the removal of the abbot's banishment. The latter, however, setting forth his reasons in a letter to the king, declined to return, but asked that Clothaire would take under his protection the monastery and brethren of Luxeuil. During the twelve years that followed, under the administration of the abbey Eustace, the monastery continued to acquire renown as a seat of learning and sanctity. Through the royal patronage the revenues and holdings were increased, the king devoting a yearly sum, from his own revenues, towards its support. Eustace and his monks devoted themselves to preaching in remote districts, not yet evangelized, chiefly in the north-eastern extremities of Gaul. Their missionary work extended even to Bavaria. Between the monasteries of Luxeuil and Bobbio in Italy (both founded by St. Columbanus) connexion and intercourse seem to have long been kept up.

**John B. Cullen.**

Eustace, **John Chetwode**, antiquary, b. in Ireland, c. 1762; d. at Naples, Italy, 1 Aug., 1815. His family was English, his mother being one of the Chetwodes of Cheshire. He was educated at Sedgley Park School, and after 1774 at the Benedictine house, St. Gregory's, Douay. He did not become a Benedictine though he always retained an attachment to the order, but went to Ireland where he taught rhetoric at Maynooth college, where he was ordained priest. He never had much sympathy with Ireland, and, not being allowed there, returned to England to assist Dr. Collins in his school at Southall Park. From there he went to be chaplain to Sir William Jerningham at Cosseyes. In 1802 he travelled through Italy with three pupils, John Cust (afterwards Lord Brownlow), Robert Rushbrooke, and Philip Roche. During these travels he wrote a journal which subsequently became celebrated in his *'Classical Tour'*. In 1805 he resided in Jesus College, Cambridge, as tutor to George Petr. This was a most unusual position for a Catholic priest, and Eustace's intercourse with leading members of the university led to his being charged with indifferentism. Dr. Milner, then vicar Apostolic, charged him with laying aside "the distinctive wishes of the Church in the matter of the *Classical Tour*, to the liberality of the Protestant clergy, with whom he associated" and with permitting Catholics under his care to attend Protestant services. "This conduct," wrote the bishop, "was so notorious and offensive to real Catholics, that I was called upon by my brethren to use every means in my power to put a stop to it." On the other hand, an itinerary says, "he never for a moment lost sight of his sacred character or its duties" (Gentleman's Magazine, see below). When Petr left Cambridge, Eustace accompanied him on another tour to Greece, Sicily, and Malta. In 1813 the publication of his "Classical Tour" obtained for him sudden celebrity, and he became a prominent figure in literary society, Burke being one of his chief friends. A short tour in France, in 1814, led to his "Letter from Paris", and in 1815 he travelled again to Italy to collect fresh materials, but he was seized with malaria at Naples and died there. Before death he bitterly lamented the erroneous tendency of certain passages in his writings. His works were: "A Political Catechism adapted to the present Moment" (1810); "An Answer to the Charge delivered by the Bishop of Lincoln to the Clergy of that Diocese at the Triennial Visitations in 1812"; "A Tour through Italy" (London, 1813, 2d ed., 1814); "A Classical Tour through Italy", 3d edition of the previous work, revised and enlarged (1815). A seventh edition of it appeared in London in 1841. It was also reprinted at Paris in 1837 in a series "Collections of English and Modern Authors on the Catholic Church and the Proofs of Christianity" (1814). The manuscript of his course of rhetoric, never published, is at Downside.

**Edward Burton.**

Eustace, **Maurice**, eldest son of Sir John Eustace, Castlemartin, County Kilkare, Ireland, martyred for the Faith, Nov., 1581. Owing to the penal laws he was not able to be educated in his native Flanders, where, after the completion of his secular studies, he desired to enter the Society of Jesus. His father, however, wrote the superiors of the college to send him home. Maurice returned to Ireland, much against his own inclination, but in the hope of being able, later on, to carry out his desire. After a brief stay, during which he tried to dissuade his father from the idea of becoming a priest, and secretly took Holy Orders. His servant, who was aware of the fact, told his father, who had his son immediately arrested and imprisoned in Dublin. A younger brother, desiring to inherit the family estates, also reported Maurice to be a priest, a Jesuit, and a friend of the queen's enemies. Consequently, Maurice was tried and convicted. During his imprisonment Adam Loftus, Protestant Archbishop of Dublin, offered him his daughter in marriage, and a large dowry, if he would accept the reformed religion. Yielding neither to bribery nor persecution, Eustace was sentenced to public execution, and hanged.

**John B. Cullen.**

Eustachius, **Bartolomeo**, a distinguished anatomist of the Renaissance period—"one of the greatest anatomists that ever lived," according to Hirsch's authoritative "Biographical Dictionary of the Most Prominent Physicians of all Times"—"he was a great authority in the science of Anatomy, in the early part of the sixteenth century; d. at Rome, August, 1574. Of the details of his life very little is known. He received a good education, and knew Latin and Greek and Arabic very well. After receiving his degree in medicine he devoted himself to the study of anatomy so successfully that with Vesalius and Columbus he constitutes the most important foundation of anatomy for modern times. He early attracted attention for his skill and knowledge, and became physician to Cardinal Borromeo, since known as St. Charles Borromeo. He was also physician to Cardinal Giulio della Rovere whom he accompanied to Rome. After the death of Columbus he was chosen professor of anatomy at the Sapienza which had been reorganized as
the Roman University by Pope Alexander VI and magnificently developed by Popes Leo X and Paul III. The reason for his selection as professor was that he was considered the greatest anatomist in Italy after Columbus's death, and the policy of the popes of his time was to secure the best possible medical school the best available teachers. This position gave him time and opportunity for original work of a high order and Eustachius took advantage of it. He published a number of works on anatomy in which he added very markedly to the knowledge of the details of the structure of most of the organs of the body accepted up to this time. His first important commercial medical school textbook was the "Anatomy." Subsequently he wrote a treatise on the kidneys, another on the teeth, a third on blood vessels, a paper on the Azygos vein, and other special anatomical structures. Morgagni and Haller declared that there was not a part of the body on whose structure he had not shed light. In the midst of his work he became, in 1570, physician to Cardinal Peretti, afterwards Pope Sixtus V. At the beginning of his career as an anatomist Eustachius criticized Vesalius rather severely for having departed too far from Galen. After having continued his own original investigations for some time, however, he learned to appreciate Vesalius's merits and did ample justice to his work.

Eustachius's greatest contributions to anatomical science passed through many vicissitudes which kept his real merit from being recognized until long after his death. His anatomical investigations were recorded in a series of plates with text attached. Eustachius himself was not afforded the opportunity to arrange for the publication of his work, as he died rather suddenly. Some of his papers and plates went to his heirs, who were disposed to burn them. They were unearthed by Lancisi, a distinguished papal physician at the beginning of the eighteenth century, and were published at the expense of Pope Clement XI. This work, "Bartholomei Eustachii Tabulae Anatomicae" (Rome, 1714), demonstrates how much Eustachius had accomplished in anatomy. His special contributions to the science were the descriptions of the stirrup bone in the ear and the canal connecting the ear and the mouth, since called by his name. His monograph on the teeth of the child is very complete and has been surpassed only in recent years. In myology he worked out the insertions and attachment of the stern-eleido-mastoid muscle, of the coccygeus, the splenius of the neck, the levator of the larynx, and the lower. His descriptions of the cranial nerves is especially full. In abdominal anatomy he added much. His description of the faecal circulation was the most complete up to his time and it was he who recognized the valve on the left side of the opening of the inferior vena cava which serves to direct the blood from this vessel through the foramen ovale into the left auricle. This constitutes a fine evidence of the remarkable knowledge of the subject. The difference between the circulatory apparatus of the adult and the child is called the Eustachian valve.

JAMES J. WALSH.

Eustachius and Companions, SAINTS, martyrs under the Emperor Hadrian, in the year 138. Feast in the West, 20 September; in the East, 2 November. Emblems, a crucifix, a stag, an oven.

The legend relates that Eustachius (before baptism, Placidus), a Roman general under Trajan, while still a heathen, saw a stag coming towards him, with a crucifix between its horns; he heard a voice telling him that he was to suffer much for Christ's sake. He received baptism, together with his wife Tatiana (or Trajana, after baptism, Theopista) and his sons, Agapius and Theopistus. The place of the vision is said to have been Guadagnolo, between Tibur and Praeneste (Tivoli and Palestrina), in the vicinity of Rome. Through adverse fortune the family was scattered, but later reunited. For refusing to sacrifice to the idols after a victory, they suffered death in a heated brazier.

The Acts are certainly fabulous, and recall the similar story in the Clementine Recognitions. They are a production of the seventh century, and were used by St. John Damascus, but the veneration of the saint is still old in both the Greek and Latin Church; he is regarded as one of the Holy Helpers, is invoked in difficult situations, and is patron of the city of Madrid and of hunters. The church of Sant' Eustachio in Rome, title of a cardinal-deacon, existed in 827, according to the "Liber Pontificalis," but perhaps as early as the time of Gregory the Great (d. 601). It claims to possess the relics of the saint, some of which are said to be at St.-Denis and at St.-Eustache in Paris. An island in the Lesser Antilles and a city in Canada bear his name.

FRANCIS MERSHMAN.

Eustathius, Saint, Bishop of Antioch, b. at Side in Pamphylia, c. 270; d. in exile at Trier in Germany, most probably in 337. He was consecrated according to some accounts in 336 or 337. He was at first Bishop of Berea in Syria, whence he was transferred to Antioch c. 323. At the Council of Nicaea (325), he was one of the most prominent opponents of Arius from and in 325-330 he was engaged in an almost continuous literary warfare against the Arians. By his fearless denunciation of Arian errors and the refusal to engage in the errors of his time, he incurred the hatred of the Arians, who, headed by Eusebius of Cesarica and his namesake of Nicomedia, held a synod at Antioch (331) at which Eustathius was accused, by submerged witnesses, of Sabellianism, incontinency, cruelty, and other crimes. He was deposed by the synod and banished to Trier in Thrace by order of the Emperor Constantine, who gave credence to the scandalous tales spread about Eustathius. The people of Antioch, who loved and revered their holy and learned patriarch, became indignant at the injustice done to him and were ready to take up arms in his defence. But Eustathius kept them in check, exhort them to remain true to the orthodox faith and humble left for his place of exile accompanied by a few friends. The adherents of Eustathius at Antioch formed a separate community by the name of Eusebians and refused to acknowledge the bishops set over them by the Arians. When, after the death of Eustathius, St. Meletius became Bishop of Antioch in 360 by the united vote of the Arians and the orthodox, the Eustathius would not recognize him. Given a synod in a situation of high tension, the Synod of Alexandria in 362. Their intransigent attitude gave rise to two factions among the orthodox, the so-called Meletian Schism (q. v.), which lasted till the second decade of the fifth century (Cavalleria, Le chisme d' Antioche, Paris, 1905).

Most of the numerous dogmatic and exegetical works of Eustathius have been lost; his principal work was "De Lingua Sacra," in which he maintained against Origen that the apposition of Samuel (I Kings, xxviii) was not a reality but a mere phantasm called up in the brain of Saul by the witch of Endor, in the same work he severely criticizes Origen for his allegorical interpretation of the Bible. A new edition of it, together with the respective homilies of Origen, was made by A. Jahn in Gebhardt's "Texte und Untersuchungen zur Geish. der altchristl. Literatur" (Leipzig, 1886), II, fasc. iv. Cavalleria recently discovered a Christological homily:

---

EUSTATHIUS 627 EUSTATHIUS
EUSTATHIUS

Michael Ott.

Eustathius, Greek savant and defender of monasticism, Archbishop of Thessalonica, b. at Constantinople in the early orders of the twelfth century; d. at Thessalonica c. 1194. He received his ecclesiastical training in the monastic school of St. Euphemia at Constantinople, became a monk there in the monastery of St. Florus, and afterwards deacon of the "Great Church" (St. Sophia), and teacher of rhetoric and secretary of the persons addressed to the emperor. He enjoyed the confidence of the imperial emperors, especially of Manuel Comnenus I (1143–80) who intrusted to him the education of one of his sons. About 1174 he was made Archbishop of Myra in Asia Minor; but before his installation, was transferred to the archiepiscopal See of Thessalonica by special direction of the emperor. In this position he proved himself a real shepherd and father of his people. He taught the monks the builder and hypocras fights of his time; he shielded his people against the excessive exactions of the imperial tax-collectors; he remained with his flock at the time of the invasion of Thessalonica by the Normans of Sicily in 1185, and tried to encourage his subjects and alleviate their sufferings. Owing to his opposition to the monastic order and his frankness of speech towards those in high places, he incurred the displeasure of the emperor and was removed from Thessalonica for a brief period; at what time, however, is not known.

Eustathius was a prolific and elegant writer, and the best Greek author of his age. His works may be classified in two categories: commentaries on ancient authors and homilies in the life of the emperor; and his writings, tracts, orations, or letters, which were occasioned by special circumstances during his episcopate in Thessalonica. Of the former class may be mentioned: "The Commentaries on the Iliad and Odyssey of Homer" (Rome, 1542–50; Basle, 1539–60; Leipzig, 1825–30); "A Paraphrase of the geographical epic of Dionysius P. 1820;" ed. Immerwahr (Leipzig, 1828); a "Commentary on the works of Pindar," of which, however, only the preface is known, ed. Tafel (Frankfurt, 1832). These works of Eustathius on the ancient classics are much prized by modern philologists. Among the works of the second class the following are to be noted: "A history of the conquest of Thessalonica by the Normans," ed. Tafel in "Kommener Vgl. Gesch.," 2d ed. 1870; "The last days of the Emperor Manuel Comnenus I, and the funeral oration at the death of the same; letters written to the emperor or other distinguished personages of his time; several tracts having reference to his plan of reform, such as: "Considerations on the Monastic Life" (German tr. by Tafel, 1847); a letter written to a stylicate of Thessalonica; a tract on hypocrisy; and others. Several purely religious works such as: four Luten sermons; a sermon for the beginning of the year; and panegyrics for the festivals of various saints. Most of his theological works, first edited by Tafel (1832), are in Migne, P. G., CXXXV, CXXXVI. In these Eustathius shows himself an earnest and zealous ecclesiastic, fully penetrated with the genuine spirit of Christianity.

Kremracher, Geschichte der byzantinischen Literatur (Munich, 1897), 536; Müller in Kirchenlex., s. v. Eustathius; Meyer in Realencyclop. (Leipzig, 1898), V; Braun in Kirch. Handlungen (Munich, 1897), 1, 252–53. (St. Petersburg, 1892), I, i; for five additional discourses.

Francis J. Schaeffer.

Eustathius of Sebastia, born about 300; died about 377. He was one of the chief founders of monasticism in Asia Minor, and for a long time was an intimate friend of St. Basil. He was censured because of the exaggerated asceticism of his followers, hesitated all his life between various forms of Arianism, and finally became a leader of the Pneumatologists condemned by the First Council of Constantinople (381). Eustathius was apparently the son of Eusebius, Bishop of Sebastia, who was the metropolis of Armenia (the Roman province). He studied under Arius (Basil, Ep. cxxxiii, 3; cxxiv, 3; cxliii, 3), and was known from the beginning as one who sympathized with the heretic. He was ordained priest and then founded a community of monks. Partly because of the idea common at that time (Fortescue, Greek Bishops, 58) that a man could be both a priest and a monk, and partly also because of the extravagance of his community, he was suspended from his priesthood by a synod at Neo-Caesarea. Later, in 340, a synod at Gangra condemned his followers (hovs παρ' Εσταθίου) for exaggerated and extravagant asceticism. These monks forbade marriage for any one, refused to communicate with married priests, and taught that no married person can be saved; they fasted on Sundays and would not do so on the appointed fast-days; they claimed special grace for their own conventicles and dissuaded people from attending the regular services of the Church. It was evidently a movement like that of the Eneartites and Montanists. Against these abuses the council drew up twenty canons, but without directly censoring Eustathius (Hefele, "Concilien gesch."); 1st ed., II, 777 sq.; Braun, "Die Abhal tung der Synode von Gangra" in "Hist. Jahrb.," 1895, pp. 556 sq.). Sozomen (Hist. Eccl., III, xiv, 36) says that Eustathius submitted to this council and gave up his eccentricities. However, a synod at Antioch (341?) condemned him again for "perjury" (Sozomen, IV, xxiv, 9). Perhaps as a result of his mission on oath. About the year 356 he became Bishop of Sebastia. St. Basil was at that time (357–358) studying the life of monks before founding his own community at Annesus, and he was much attracted by Eustathius's reputation as a zealous leader of monasticism. For years, till about 372 or so, Basil believed in and defended his friend. But Eustathius was anything but a Catholic. Once, apparently in 366, he persuaded the pope (Liberius, 352–366) of his orthodoxy by presenting a confession of the Nicene faith (Socrates, IV, xii); otherwise he wavered between every kind of Arianism and semi-Arianism and signed all manner of heretical and contradictory formula. In 385 a synod at Melitene deposed him, and after that he took the oath of rigorism rather than for Arianism. Meletius (later the famous Bishop of Antioch) succeeded him at Sebastia. But the Semi-Arians still acknowledged Eustathius. He wandered about, was present at many synods (at Seleucia in 359, later at Smyrna, in Pisidia, Pamphylia, etc.—Socrates, IV, xii, 8), and signed many formula. If one can speak of any principle in so inconsistent a person as Eustathius, it would be that he was on the side of one of the forms of Semi-Arianism, opposed to Catholics on the one hand and to extreme Arians on the other. St. Basil found him out and broke with him definitively at last (about 372 or 373).
By this time Eustathius had taken up the cause of the people who denied the consubstantial nature of the Holy Ghost (Socrates, Hist. Eccl., II, xiv, 6; Basil, Ep. ccciii, 3). We hear of him last about 377; he was then a very old man (Basil, Ep. cei, 4; ccciii, 3). Besides his activity as a founder of monasticism in Roman Armenia, Pontus, and Paphлагонiа (Sozomen, III, xiv, 36), he also mentioned several works of charity, builder of almshouses, hospitals, refuges, etc. (Epiphanius, Hær., lxxv, 1; Sozomen, III, xiv, 36).

Eustochium Julia, Saint, virgin, b. at Rome c. 368; d. at Bethlehem, 25 Sept., 419 or 420. She was the third of three daughters of the Roman Senator Toxotius and his wife St. Paula (q. v.), the former belonging to the noble Julian race, and his ancestry through the Scipios and the Graechei (Jerome, Ep. cxviii). After the death of her husband (c. 380) Paula and her daughter Eustochium lived in Rome as austere a life as the Fathers of the desert. When St. Jerome came to Rome from Palestine in 382, they put themselves under his spiritual guidance. Hymettius, and Rome was drawn into sacred study and science and tried to persuade the youthful Eustochium to give up her austere life and enjoy the pleasures of the world, but all their attempts were futile. About the year 384 she made the vow of perpetual virginity, on which occasion St. Jerome addressed to her his celebrated letter "De custodii virginitatis" (Ep. xxii in P. L., XXII, 394–425). A year later St. Jerome returned to Paula and St. Eustochium at this time was visiting Rome. After some time she left Rome with Paula and Eustochium. In 386 they accompanied St. Jerome on his journey to Egypt, where they visited the hermits of the Nitrian Desert in order to study and afterwards imitate their mode of life. In the fall of the same year they returned to Palestine and settled permanently at Bethlehem. Paula and Eustochium at once began to multiply foundations to be in line with the monastic spirit where Christ was born. While the erection of the monasteries was in process (386–9) they lived in a small building in the neighbourhood. One of the monasteries was occupied by monks and put under the direction of St. Jerome. The three other monasteries were taken by Paula and Eustochium and the numerous virgins that flocked around them. The three nunneries, which were the monasteries of Bedecla, had only one oratory, where all the nuns met several times daily for prayer and the chanting of psalms. St. Jerome testifies (Ep. 308) that Eustochium and Paula performed the most menial services. Much of their time they spent in the study of Holy Scripture under the direction of St. Jerome.

Epiphanius, Hær. c. 286; cf. also Latin and Greek with equal case and was able to read the Holy Scriptures in the Hebrew text. Many of St. Jerome’s Biblical commentaries owe their existence to his influence and to her he dedicated his commentaries on the prophets Isaiah and Ezekiel. The letters which St. Jerome wrote for her instruction and spiritual advancement are, according to his own testimony (De viris illustribus, cap. exxvii) numerously. After the death of Paula in 404, Eustochium assumed the direction of the nunneries. Her task was a difficult one on account of the impoverished condition of the temporal affairs which was brought about by the lavish almsgiving of Paula. St. Jerome was of great assistance to her by his encouragement and prudent advice. In 417 a great misfortune overtook the monasteries of Bedecla. A crowd of ruffians attacked and pillaged them, destroyed one of them by fire, besides killing and maltreating some of the inmates. The wicked deed was probably instigated by John, the Patriarch of Jerusalem, and the Pelagians against whom St. Jerome had written some sharp polemics. Both St. Jerome and St. Eustochium informed Pope Innocent I by letter of the occurrence, who severely reproved the patriarch for having permitted the outrage. Eustochium died shortly after and was succeeded in the supervision of the nunneries by her niece, the younger Paula. The Church celebrates her feast on 28 September. Butler, Lives of the Saints, 28 Sept.; Baring-Gould, Lives of the Saints, 28 Sept.; and, in the Catholic, Baring-Gould, s. v.; Acts SS., September, VII, 585–603; St. Jerome, Epistles, especially xlv, liv, ev, cvm in P. L., CCXXII; Häuser in Kirchen- geschichten, and Eustochium, in Rev. des Ducs de Montes, LXII, 181 (New York, 1886); Thiriet, in Rev. des Ducs de Montes, LXII, 465 (Paris, 1886).

Michael Ott.

Euthalii (EuthaMór), a deacon of Alexandria and later Bishop of Sulea. He lived towards the middle of the fifth century, and is chiefly known through his work on the New Testament in particular as the author of the “Euthalian Sections”. It is well known that the divisions into chapters and verses in which we are familiar were entirely wanting in the original and early copies of the New Testament writings; there was even no perceptible space between words. To obviate the manifest inconveniences arising from this condition of the text, Ammonius of Alexandria, in the third century, conceived the idea of dividing the Four Gospels into sections and numbered the same. The disposition of the narrative embodied in them, and Euthalii, following up the same idea, extended a similar system of division to the other books of the New Testament with the exception of the Apocalypse. So obvious were the advantages of the scheme that it was soon adopted throughout the Greek Church. As divisions of the text these sections have no longer any intrinsic value. But as they were soon universally adopted in nearly all the Churches, and noted by the copyists, they are valuable as chronological indications, their presence or absence being an important circumstance in determining the antiquity of a manuscript.

Other labours of Euthalii in connexion with the text of the New Testament refer to the larger sections that the divisio into chapters and verses, with the more minute divisions of the text called στιχοι, or verses. The custom of reading portions of the New Testament in the public liturgical services was already ancient in the Church, but with regard to the choice and delineation of the passages there was little or no uniformity, the Churches having, for the most part, each its own series of selections. Euthalii elaborated a scheme of divisions which was soon universally adopted. Neither the Gospels nor the Apocalypse enter into this series, but the other portions of the New Testament are divided into 57 sections of varying length, 53 of which are assigned to the Sundays of the year, while the remaining four refer probably to Christmas, the Epiphany, Good Friday, and Easter. The idea of dividing the text into chapters and verses, did not originate with Euthalii. It had already been applied to portions of the Old Testament, especially to the poetical parts, and even to some parts of the New. Here, as with regard to the other divisions, Euthalii only carried out systematically and completed a scheme which had been but partially and imperfectly realized by others, and his work marks the conclusion of that labours. Euthalii was the last of a long line of commentators who had endeavored to elucidate and subdivide the text. These στιχοι were of unequal length, either containing a few words forming a complete sense, or as many as could be conveniently uttered with one breath. Thus, for instance, the Epistle to the Romans contained 920 of these verses; Galatians, 293; Hebrews, 703; Philonous, 57, and so on.

Euthalii his textual labours Euthalii framed a catalogue of the quotations from the Old Testament and from profane authors which are found in the New-
EUTHANASIA

Testament writings. He also wrote a short “Life of St. Paul” and a series of “Argumenta” or short summaries which are placed by way of introduction to the different books of the New Testament. Of Euthalius’ activities as a bishop little or nothing is known. Even the location of his episcopal see, Sula, is a matter of doubt. It can hardly be identified with the locality of that name in Sardinia. More likely it was situated somewhere in Egypt, and it has been conjectured that it is the same as Psilka, the son of the Thebaid in the neighbourhood of Syene.

After having long lain in oblivion, the works of Euthalius were published in Rome, in 1898, by Lorenzo Andrade, the Prefect de Bibliothèque. They are embodied in the first volume of his “Collectanea Monumentorum Veterum Ecclesiae Graecaeae Latinae.” They can also be found in Gallandii (Biblioth. Pat., X, 197) and in Migne (P. G., LXXXV, 621).

Vigouroux, in Deut. de la Bible, s. v.; Milman in Dict. of Christian Biography, s. v.; Scriverius, A Plain Introduction to the Criticism of the New Testament (London, 1894), 53, 63, 64, etc.

JAMES F. DRISCOLL

Euthanasia (from Greek eu, well, and thanatos, death), easy, painless death. This is here considered in so far as it may be artificially brought about by the employment of anesthetics. When these last are of a character to deprive the sufferer of the use of reason, their effect at this supreme hour of human life is not voided, but rather increased by the very acts of the Catholic Church. The reason for this attitude is that this practice deprives a man of the capacity to act meritoriously at a time when the competency is most necessary and its product invested with finality. It is equally obvious that this space is immeasurably precious to the sinner who has still to reconcile himself with God’s office.

An additional motive assigned for this doctrine is that the administration of drugs of the nature specified is in the premises if not formally at all events equivalently a shortening of the life of the patient. Hence as long as the stricken person has as yet made no adequate preparation for death, it is always grossly unlawful to induce a condition of insensibility. The most that may be granted to those charged with responsibility in the case is to take up a passively permissive demeanour whenever it is certain that the departing soul has abundantly made ready for the great summons. This is especially true if there is ground for apprehending, from the dying person’s continued possession of his faculties, a relapse into sin. In no contingency whatever, can any positive interference be given to mean whose scope is to have one die in a state of unconsciousness. What has been said applies with equal force and for the same reasons to the case of those who have to suffer capital punishment by process of law.

JOSPEH F. DELANY

Euthyphro, Saint (styled The Great), abbot in Palestine; b. at Melitene in Lesser Armenia, A.D. 377; d. A.D. 473. He was educated by Bishop Oteus of Melitene, who afterwards ordained him priest and placed him in charge of all the monasteries in the Diocese. On the death of his bishop he secretly set out on a pilgrimage to Jerusalem and remained for some time with a settlement of monks at a laura called Pharan, about six miles east of Jerusalem. In 411 he withdrew, with St. Theoctistus, a fellow-hermit, into the wilderness, and lived for a while in a rough cavern on the banks of a torrent. When many disciples gathered around them they turned the cavern into a building, and a monastery which was placed in charge of St. Theoctistus.

A miraculous cure which Euthymius was believed to have effected for Terebon, the son of the Saracen chief Aspethus, spread the fame of the holy hermit far beyond the confines of Palestine.—Aspethus was afterwards ordained priest and became bishop over his tribe, in which capacity he attended the Council of Ephesus in 431.

When the report of this miracle had made the name of Euthymius famous throughout Palestine, and large crowds came to visit him in his solitude, he retreated with his disciple Domitian to the wilderness of Ruba, near the Dead Sea. Here he lived for some time on a remote mountain called Marda whence he afterwards withdrew to the desert of Ziphio (the ancient Engaddi). When large crowds followed him to this place also, he returned to the neighbourhood of Pharan and to the place of his first visit, to Theoctistus, where he took up his abode in a cavern. Every Sunday he came to the monastery to take part in the Divine services. At length, because numerous disciples desired him as their spiritual guide, he founded, in 420, on the right side of the road from Jerusalem to Jericho, a laura similar to that of Pharan. The church connected with this laura was dedicated to St. Peter by Julius, first Patriarch of Jerusalem. When the Council of Chalcedon (451) condemned the errors of Eutyches, it was greatly due to the authority of Euthymius that most of the Eastern recluses accepted its decrees. The Emperor Eutyches was converted to Catholic unity through his efforts. The Church celebrates his feast on 20 January, the day of his death.

M. OTT.

Eutropius of Valencia, a Spanish bishop; d. about 610. He was originally a monk in the Monasterium Serabitum, generally believed to have been situated in the province of Valencia, Spain. It was founded some time in the sixth century by the monk Donatus who had been driven from Roman Africa during one of the Vandal persecutions. The rule he introduced must have been based on that of the first Patrician monks, which has caused the members of this community to be connected with the Augustinians, without, however, sufficient warrant. The Monasterium Serabitum is known only through the references of Sts. Isidore and Ildephonson its founder and one of his disciples, Eutropius, who succeeded as abbot.

The text of the letters, together with the letters, one to Licinianmus, Bishop of Carthagena, and two to Peter, Bishop of Iturbica. In the first, which has been lost, he inquires the reason for appointing baptized children with holy chrism. This letter is known through St. Isidore. The same saint mentions a letter to Bishop Peter, the text of which has been preserved, in which he says every monk should follow the title is "De dindsione monasteriorum et ruinâ monasteriorum". In response to a suggestion of some candidates for his monastery, he points out that the number of monks is a small matter compared with their earnestness. He may be criticized for his severity in enforcing the rule and in reprimanding the guilty, but he cannot justify himself, as his whole care consists in his Rule. By ninety-nine in the letter he lays down. And thus the reproaches made against him fall back on their authors. In any case he will not swerve from his course; he is indifferent to the criticisms of men. He cannot allow the faults of his monks to go unchecked. The Scriptures and the Fathers agree that correction is one of the first duties of any who is charged with the guidance of others. And neglect of this head will only lead to serious irregularities. The second letter to Bishop Peter touches on the seven deadly sins. Like Cusanus, Eutropius enumerates eight: gluttony, lust, covetousness,
anger, sadness, faint-heartedness, vanity, and pride. He analyzes them, traces the links that unite them, and emphasizes their results. A Christian should resist the Ennead with all his strength, provided that of himself he cannot be victorious, but that he needs the help of God. As Eutropius develops his thought the teaching of Cassian becomes more and more evident. Eutropius was still at the monastery when he wrote these letters. It was not till 589 that he became Bishop of Valencia, and his death cannot be set down earlier than 610. These are the dates fixing his time of life, and he is known to have written three volumes of his episcopacy. Historians have usually called him saint, but it does not appear that he was ever honoured by a liturgical cult. His letters are to be found in Migne, "P. L.", LXXX, 9–20.

Eutyches, an heresarch of the fifth century, who has given his name to an opinion to which his teaching and influence contributed little or nothing. The essence of that view is the assertion that Christ has but one nature "divine" and "human", and that, considered indifferently as the Eutychian or the Monophysite heresy, though Eutyches was not its originator, and though he was repudiated and condemned by many of the Monophysites, who all looked upon St. Cyril of Alexandria as their great Doctor. Eutyches in 448 was seventy years of age, and had been for thirty years archimandrite of a monastery outside the walls of Constantinople, where he lived over three hundred monks. He was not a learned man, but was much respected and had influence through the infamous minister of Theodotus II, the eunuch Chrysaphius, to whom he had stood godfather. He was a vehement opponent of Nestorianism, and of the Antiochian party led by Theodoret of Cyrus (Cyrhus) and John of Antioch. These bishops had, for a time, championed the orthodoxy of Nestorius, but had eventually accepted a Council of Ephesus in 431, making peace with St. Cyril of Alexandria in 434. Mutual explanations had been exchanged between the great theologians Theodoret and Cyril, but their partisans had not been convinced. On the death of Cyril in 444, his successor Dioscorus was not slow to renew hostilities, and the Cyrillicians endeavoured to have the Eutychian doctrine condemned. It was but as a part of this great movement that Eutyches, at Constantinople, began to denounce a supposed revival of Nestorianism. He wrote to Pope Leo on the subject, and received a sympathetic reply. The Patriarch of Antioch, Donnus, was on his guard, and he addressed a synodal letter to the Emperor Theodosius II, accusing Eutyches of renewing the heresy of Apollinaris (this had been the charge of the Antiochian party against St. Cyril) and of wishing to anathematize the great Antiochian teachers of a past generation, Diodorus and Theodore—a point in which Eutyches was not altogether in the wrong (Facundus, vii, 5, and xiii, 5). This was probably in 448, as St. Flavian, Bishop of Constantinople, had, in 446, already rebuked him for the same charge. Some years later, in Nov. 8th, with regard to a point of discipline connected with the province of Sardis, Eutyches had been accusing various personages of covert Nestorianism, and at the end of the session of this synod one of those incriminated, Eusebius, Bishop of Doryleum, brought the question forward, and professed a counter charge of heresy against the archimandrite.

Eusebius had been, many years before, while yet a layman, one of the first to detect, and denounce, the errors in the sermons of Nestorius, and he was naturally indifferent at being called a Nestorian. Flavian expressed great surprise at this sudden and unprecedented charge, and suggested a private conference with Eutyches. Eusebius refused, for he had had frequent interviews without result. At the second session the orthodox view was defined, at Eusebius's request, by the reading of the second letter of St. Cyril to Nestorius, and its approbation by the council of Ephesus, and also of the letter of Cyril to John of Antioch, "Lectentur eari", written after the agreement between the two patriarchs, in 434. These documents were acclaimed by all. Flavian summed up to the effect that Christ was "of two natures", ex duo genetrices, after which he alleged that the Nestorians and Eutyches of Amasea even spoke explicitly of His being "in two natures", and all the bishops echoed, in their own words, the sentiments of the President. In the third session the messengers, who had been sent to summon Eutyches to attend, returned, bringing his absolute refusal. He had determined, he declared, that he would never set his foot outside his monastery, which he regarded as his tomb. He was ready to subscribe to the councils of Nicea and Ephesus; though in doing so he ought not to be understood to subscribe to, or to condemn, any errors into which they might have fallen; he searched the Scriptures alone, as being more sure than the expositions of the Fathers, and he adored one nature of God, incarnate and made man in the Incarnation. He fell not into those errors from which he had been accused of saying that God the Word had brought His flesh down from heaven. This was untrue. He acknowledged our Lord Jesus Christ as of "two natures (ex duo genetrices)" hypothetically united, as perfect God, and perfect Man born of the Virgin Mary, not having flesh consubstantial with the Father. These statements of Eutyches were substantiated by three witnesses. The council therefore addressed a letter to him, summoning him to appear, for his excuse was insufficient in face of so serious a charge. Eusebius of Doryleum, whose ardent spirit was by no means quenched, then pointed out that Eutyches had been sending round a writing to the different monasteries to stir them up, and that danger to the council might result. Two priests were therefore sent round to the different monasteries in the city, two to those across the Golden Horn, and two across the Bosphorus to Chalecedon, to make enquiries.

Meanwhile the envoys sent to Eutyches had returned. After some difficulties and the plea of illness, Eutyches had consented to receive them. He still refused to leave his monastery, and begged them not to trouble to call him out, but to treat him as contumacious at once, if they pleased. The council, however, sent him a third and final summons, to appear on the morning of the next day but one, 17th Nov. or the consequences. The next day a Priest-Archimandrite Abraham and three deacon monks appeared on behalf of Eutyches. Abraham declared that Eutyches had passed the night in groaning, and that he himself had consequently not slept at all either. St. Flavian replied that the Synod would wait for Eutyches's recovery. He was not asked to come to enemies, but to brothers and fathers. He had formerly entered the city when Nestorius attacked the truth. Let him do the same once more. Repentance will be no disgrace to him. As the assembly rose, "You know the accuser's zeal, and that fire itself seems cold to him, on account of his zeal for piety. And God knows, I have both advised and treated him to desist. But when he set to work, what was I to do? I desire not your dispersion, God forbid, but rather to gather you in. It is for enemies to disperse, for fathers to gather into one."

On the following day, Eutyches did not appear, but promised to come in five days, that is on the following Monday. It was proved that Eutyches had sent round a tome to other monasteries for signature. It was said to contain the Faith of Nicea and Ephesus, nor was it shown to have contained anything further.
On the Saturday, Eusebius elicited testimony to further heretical remarks of Eutyches, which the envoys had heard him make. In particular he had denied two natures in Christ after the Incarnation, and had said he was ready to be condemned; the monastery should be his tomb. On Monday 22nd Nov., Eutyches was sought vainly in the Church and the Archbishop's palace, but was eventually announced as arriving with a great multitude of soldiers, and monks, and attendants of the Prefect of the Praetorian guard, and this escort only permitted him to enter under the archbishop's roof to be restored to them. With the cortège came a Silentiary named Magnus, bringing a letter from the Emperor, who desired that the Patrician Florentius should be admitted to the Council; the Silentiary was therefore sent to invite his presence. Eusebius showed more than ever his anxiety that Eutyches should be convicted on the grounds of his former sayings, lest he should now un-say them, and be disputed by them; for in that case his accuser might be made liable to the penalties due to calumniious accusation: "I am a poor man," he said, "without means. He threatens me with exile; he is rich; he has already depicted the Oasis as my destination! Flavian and the Patrician replied that any submission made by Eutyches now should not release him from the old anathemas. Flavian then said: "You have heard, priest Eutyches, what your accuser says. Say now whether you admit the union of two natures, εκ δύo φύσεων ἐνυνων," Eutyches replied: "Yes, εκ δύo φύσεων."

Eutyches interrupted: "Do you acknowledge two natures, Lord Archimandrite, after the Incarnation, and do you say that Christ is consubstantial with us according to the flesh?" Eutyches turned the question between Catholic truth and the heresy of Monophysitism. Eutyches would not give a direct answer. Perhaps he was puzzled and cautious. At all events he saw that a negative reply would mean immediate condemnation, while an affirmative one would contradict his own former utterances. "I did not call you here to hear my view to your Holiness. It is in this paper. Order it to be read." As he would not read it himself, Flavian ordered him to declare his belief. His vague reply evaded the point, merely asserting that he believed "in the Son's incarnate advent of the flesh of the holy Virgin, and that He was perfectly made Man for our salvation". When urged, Eutyches declared that he was not aware of anything which was not consubstantial with us, but he acknowledged the holy Virgin to be consubstantial with us. Basil of Seleucia urged that her Son must therefore also be consubstantial with us, since Christ was incarnate from her. Eutyches answered: "Since you say so, I agree with all;" and he further explained that the body of Christ is the body of God, not of a man, though it is a human body. Provided he was not understood to deny that Christ is the Son of God, he would say "consubstantial with us", as the Archbishop wished it and permitted it. Flavian denied that the expression was novel.

Florentius showed that the Emperor had judged rightly that he was a good theologian, for he now pushed the Archimandrite on the essential point, the two natures. Eutyches answered explicitly: "I assure you that our Lord was of [εκ] two natures, before the union; but after the union, I acknowledge one nature." It is very odd that no comment was made on this utterance. The synod ordered Eutyches to anathematize all that was contrary to the letters of Cyril, which had been read. He refused. He was ready enough to accept the letters, according to the synod's wish, but he would not anathematize all who did not use these expressions; otherwise he would be anathematizing the holy Fathers. Nor would he admit that Cyril or Athanasius had taught two natures after the Incarnation (and this was indeed correct, so far as mere words go). But Basil of Seleucia rightly urged: "If you do not say two natures after the union, you say there is mixture or confusion" (though, at the Robber Council, the unfortunate bishop was fain to deny his words). Florentius then declared, that he is not orthodox who does not confess εκ δύo φύσεων and also διο φύσεως. The synod agreed, and considered the forced submission which Eutyches offered to be insincere. Flavian then pronounced the sentence of degradation, excommunication, and deposition. This was signed by about 30 bishops, including Julian of Thessalonica and Cyril of Alexandria. The act of the synod are preserved for us, because they were read in full at the Robber Council of Ephesus, in the following year 449, and again, in 451, at the Council of Chalcedon as a part of the Acts of the Robber Council. Flavian took care that the acts should also be signed by many archimandrites of the city. Eutyches, on his side, wrote for support to the chief bishops of the wide empire to assume a strong position against Constantinople with complaints. He sent an appeal to the pope (St. Leo, Ep. xxi) explaining that he had refused to affirm two natures and to anathematize all who did not do so; else he would have condemned the holy Fathers, Popes Julius and Felix, Saints Athanasius and Gregory (he is referring to the extracts from the Fathers on the Council of Ephesus which were placed before him). Flavian sent an answer to Eutyches; later in 533 it was declared that these papal documents were Apollinaris forgeries, and such is still the opinion of critics. See Harnack, Bardenhewer, etc.). Eutyches continues: "I requested that this might be made known to your holiness, and that you might judge as you should think fit, declaring that in every way I should follow that which you approve." Eutyches then sent his appeal to the pope. He could only prove that in a low voice he had said he referred his case to the great patriarchs. When St. Leo had received the Acts of the Council, he concluded that Eutyches was a foolish old man who had erred through ignorance, and might be restored if he repented. Dioscorus of Alexandria, who was at present setting forth his views, was taking a majority over Constantinople, simply annulling the sentence of Flavian, and absolved Eutyches.

The archimandrite had not been touched by the consideration Flavian had shown. His obstinacy continued. He obtained, through Chrysaphius, a new synod of 32 bishops, which met in April 449 (without the presence of Flavian, but including the Patrician Florentius). Eutyches insisted that the former synod had not done his justice (he had had no part in the condemnation), in order to examine his complaint that the Acts had been falsified. After a careful revision of them, some slight alterations were made to please Eutyches; but the result was of no practical importance. Dioscorus and Eutyches had obtained the convocation by the Emperor of an oecumenical council to meet at Ephesus on 1st August, 449. The proceedings of the party of Dioscorus before and at that council will be found under Dioscorus, and ROBER COUNCIL OF EPHESUS; it is only necessary to say here that in the first session Eutyches was exculpated, and absolved, while violence was done to Flavian and Eusebius, who were imprisoned. The former soon died of his sufferings. Both had appealed to Eutyches, who, on the death of Florentius, had supported Theodosius II supported it. On that Emperor's sudden death the outlook changed. A new council met at Chalcedon in October, 451, at the wish of the Emperor Marcian and his consort St. Pulcheria, the course of which was directed by imperial commissioners, in accordance with the directions of St. Leo, whose legates were present. Dioscorus was deposed and exiled to Paphlagonia. Eutyches was also exiled. A letter of St. Leo (Ep. 134), written 15th April, 451, complains that Eutyches is still spreading his poison in banishment, and begs Marcian to transfer him to some more distant and lonely spot. The old man does not seem
to have long survived. His monastery, at Constantinople, was put under the supervision of Julian of Cos as visitor, that prelate being still the papal representative at Constantinople. Hence, the name Eutychianism is given by some writers to only the more extreme of these sects, or even only to those in Armenia. It seems best to use the words indifferently, as no party of the sect looked to Eutyches as a founder or a leader, and Eutychianism is but a nickname for all those who, like Eutyches, rejected the orthodox expression "two natures of Christ. The tenet "one nature" was common to all Monophysites and Eutychians, and they affected to call Catholics Dyophysites or Dyophysites. The error took its rise in a reaction against Nestorianism, which taught that in Christ there is a human hypostasis or person as well as a Divine. This was interpreted to imply a want of reality in the union of the Word with the assumed Humanity, and even to result in the conclusion that Christ was not God at all! In this his intention of Nestorius himself in giving his incorrect explanation of the union. He was ready to admit one ἰδιωτικός, but not one hypostatic, a "prosopie" union, though not a "hypostatic" union which is the Catholic expression. He so far exaggerated the distinction of the Humanity from the Divine Person Who assumed it, that he denied that the Blessed Virgin could be called Mother of God, and that the Virgin, as a woman, was condemned beforehand the Monothelitae, if not the Monophysites, views which were to be unfortunately based on certain ambiguities in his earlier expressions. If he did not arrive quite at the exactness of the language in which St. Leo was soon to formulate the doctrine of the Church, yet the following words, drawn up by the Antiochian party and fully accepted by Cyril in his letter, are clear enough; "before the worlds begotten of the Father according to the Godhead, but in the last days and for our salvation of the Virgin Mary according to the Manhood; consubstantial with the Father in the Godhead, consubstantial with us in the Manhood; for a union of two natures took place, whereunto we confess one Christ, one Son, one Lord. And as we say "one Christ," in the understanding of this unconfused union, we confess the Blessed Virgin to be Theotokos, because the Word of God was incarnate and man made, and through her conception united to Himself the temple He received from her. And we are aware that the words of the Gospels, and of the Apostles, concerning the Lord are, by theologians, looked upon some as applying in common [to the two natures] as belonging to the one Person; others as attributed to one of the two natures; and that they tell us by tradition, that some are of divine import, to suit the Divinity of Christ, others of humble nature belonging to His humanity." In this "creed of the union" between John and Cyril, it is at least implied that the two natures remain after the union (against Monophysitism), and it is quite clearly enunciated that some expressions belong to the Person, others to each of the natures, as, e.g., it was later defined that the activities (ἐνέργεια) and will are of the Natures (against Monothelities), while Sonship (against the Adoptionists), is of the Person. There is no doubt that Cyril would have understood rightly and have accepted (even apart from papal authority) the famous words of St. Leo's tome: "Agit enim utrque forma eum alterius modi nocte natum, etsi unam "naturae", unam "hypostasi", unam "personam" habet. Eum enim, quod Mater, in hac 'creed' John Chapman.

Eutychianism and Monophysitism are usually identified as a single heresy. But as some Monophysites, the Catharoi, who were the Nestorians, and the Nestorians, and the Eutychians, and the Monophysites, they affected to call Catholics Dyophysites or Dyophysites. The error took its rise in a reaction against Nestorianism, which taught that in Christ there is a human hypostasis or person as well as a Divine. This was interpreted to imply a want of reality in the union of the Word with the assumed Humanity, and even to result in the conclusion that Christ was not God at all! In this his intention of Nestorius himself in giving his incorrect explanation of the union. He was ready to admit one ἰδιωτικός, but not one hypostatic, a "prosopie" union, though not a "hypostatic" union which is the Catholic expression. He so far exaggerated the distinction of the Humanity from the Divine Person Who assumed it, that he denied that the Blessed Virgin could be called Mother of God, and that the Virgin, as a woman, was condemned beforehand the Monothelitae, if not the Monophysites, views which were to be unfortunately based on certain ambiguities in his earlier expressions. If he did not arrive quite at the exactness of the language in which St. Leo was soon to formulate the doctrine of the Church, yet the following words, drawn up by the Antiochian party and fully accepted by Cyril in his letter, are clear enough; "before the worlds begotten of the Father according to the Godhead, but in the last days and for our salvation of the Virgin Mary according to the Manhood; consubstantial with the Father in the Godhead, consubstantial with us in the Manhood; for a union of two natures took place, whereunto we confess one Christ, one Son, one Lord. And as we say "one Christ," in the understanding of this unconfused union, we confess the Blessed Virgin to be Theotokos, because the Word of God was incarnate and man made, and through her conception united to Himself the temple He received from her. There is no doubt that Cyril would have understood rightly and have accepted (even apart from papal authority) the famous words of St. Leo's tome: "Agit enim utrque forma eum alterius modi nocte natum, etsi unam "naturae", unam "hypostasi", unam "personam" habet. Eum enim, quod Mater, in hac 'creed' John Chapman.
in these two phrases the word *consubstantial* appears in different senses; for the Father and the Son have one substance *numero*, whereas the Incarnate Son is of one substance with us *specie* (not *numero*, of course). It is therefore not to be wondered at, if the expression “consubstantial with us” was avoided in the fourth century. In like manner the word *physis* has its full meaning when applied to the Divine Nature of Christ, but a restricted meaning (as has been just explained) when applied to His Human Nature.

In St. Cyril's use of the formula its signification is plain. "It means", says Newman (loc. cit., p. 316), "(a), that when the Divine Word became man, He remained one and the same in essence, attributes and personality; in all respects the same as before, and therefore *thea physis*. It means (b), that the manhood, on the contrary, which He assumed, was not in all respects the same nature as that *massa, usia, physis*, etc., out of which it was taken; (1) from the very circumstance that it was only an addition or supplement to what He was already, not a being complete in itself; (2) because in the act of assuming it, He changed it in its qualities. This added nature, then, was best expressed by a term which signified its position, but by an adjective or participle, as *στηρικυμένη*. The three words answered to St. John's *ὁ λόγος σάρξ εὐγενής, ἀ. ἐ. στηρικυμένος ἡ.* Thus St. Cyril intended to safeguard the teaching of the Council of Antioch (against Paul of Samosata, 264–72) that the Word is unchanged by the Incarnation, "that He is in the flesh, but not formed, and not united in heaven" (p. 317). He intended by his one nature of God, "with the council of Antioch, a protest against that alterableness and imperfection, which the anti-Catholic schools affixed to their notion of the Word. The council says 'one and the same in *usia*': it is not speaking of a human *usia* in Christ, but of the divine. The essence is the same in Cyril's Fathers as in St. Paul's Epistles. St. Cyril has in like manner written a treatise entitled *quod unus sit Christus*; and, in one of his Paschal Epistles, he enlarges on the text 'Jesus Christ, yesterday, and to-day, the same, and for ever.' His great theme in these words is not the coalesing of the two natures into one, but the error of making two sons, one before and one upon the Incarnation, one divine, one human, or giving to one of them the marking of the other: 'that nature subject to the humanity' (pp. 321–2). It has been necessary thus to explain at length St. Cyril's meaning in order to be able to enumerate the more briefly and clearly, the various phases of the Eutychian doctrine.

1. The Cyrillian party before Chalcedon did not put forward any doctrine of their own; they only denounced as Nestorians any who taught *δύο φύσεων*, two natures, which they made equal to two hypostases, and two Sons. They usually admitted that Christ was *ἐν δύο φύσεωσι* "of two natures", but this meant that the Humanity before (that is, logically before) it was assumed was a complete *φύσις*; it was no longer a *φύσις* (subsistent) after its union to the Divine nature. It was natural that they should be aware of the teaching of St. Leo, that there were two natures: "Tenet enim sine defectu proprietatem suam utraque naturae", "Assumpsit formam servi sine sorde peccati, humana autem divina non minucius", and if they chose to understand "nature" to mean a subsistent nature, they were even bound to reject such language as Nestorian. Their fault in itself was not necessarily that they were Monophysites at heart, but that they would not stop to listen to the six hundred bishops of Chalcedon, to the pope, and to the entire Western Church. Those who were ready to hear explanations and to realize that words may have more than one meaning (following the admirable example set by St. Cyril himself), were able to remain in the unity of the Church. The rest were rebels, and whether orthodox in belief or not, well deserved to find themselves in the same ranks as the real heretics.

2. Eutyches himself was not a Cyrillian. He was not a Eutychian in the ordinary sense of that word. His mind was not clear enough to be definitely Monophysite, and St. Leo was apparently right in thinking him ignorant. He was with the Cyrillians in denouncing as Nestorians all who spoke of two natures. But he had never adopted the "consubstantial with us" of the "creed of the union", nor St. Cyril's admissions, in accepting that creed, as to the two natures. He was willing to accept St. Cyril's letters and the decisions of Ephesus and Nicaea only in a general way, in so far as they contained no error. His disciple, the monk Constantine, at the revision, in April, 419, of the condemnation of Eutyches, explained that he did not accept the Fathers as a canon of faith. In fact Eutyches had simply upheld the ultra-Protestant view that nothing can be imposed as of faith which is not verbally to be found in Scripture. This, together with an exaggerated horror of Nestorianism, appears to describe his whole theological position.

3. Dioscorus and the party which followed him seem to have been Monophysites, who by an excessive dislike of Nestorianism, fell into excess in minimizing the completeness of the Humanity, and exaggerating the effects upon it of the union. We have no documents enough to tell us how far their error went. A fragment of Dioscorus is preserved in the "Antiheretical" of Nicephorus (Spic. Solesm., IV, 380) which asks: "If the Blood of Christ is not in the first place the Blood of God's and not a man's, how does it differ from the blood of goats and bulls and the ashes of a heifer? For this is earthly and corruptible, and the blood of man according to nature is earthly and corruptible. But God forbid that we should say the Blood of Christ is consubstantial with one of those things which are according to nature (ἐν τῷ τῶν κατὰ φύσιν ἑθεσθησάντων)." If this reads really, as seems to be the case, as written by Dioscorus from his exile at Gangra, we shall have to class him with the extreme Monophysite "Incorruptible" in that he rejects the "consubstantial with us" and makes the Blood of Christ incorruptible of its own nature. But the passage may conceivably be a Julianist forgery.

4. The Monophysite Church, the first Monophysite Patriarch of Alexandria, was on the contrary nearly orthodox in his views, as has been clearly shown by the extracts published by Lebon from his works, extant in Syriac in a MS. in the British Museum (Addit. 12156). He denies that *φύσις*, nature, can be taken in an abstract sense. Hence he makes extracts from St. Leo, and mocks the pope as a pure Nestorian. He does not even accept *ἐν δύο φύσεωι*, and declares there can be no question of two natures, either before or after the Incarnation. "There is no nature which is not a hypostasis, nor hypostasis which is not a person." So far we have, not hereby, but only a term defined contrary to the Chalcedonian and Western usage. A second point is the way Elurus understands *φύσις* to mean that which is the basis of the union, or produced by nature God, not man; he became man only by "οἰκονομία" (economy or Incarnation); consequently His Humanity is not His *φύσις*. Taken thus, the formula *μια φύσις* was intended by Elurus in an orthodox sense. Thirdly, the actions of Christ are attributed to His Divine Person, to the one Christ. Here Elurus seems to be unorthodox. For the presence of Monophysism is the refused to ascribe the actions (*ἐνθρογαία*) between the two natures, but to insist that they are all the actions of the one Personality. How far Elurus was in reality a Monothelite cannot be judged until his works are before us in full. He is, at all events in the main, a schismatic, full of hatred and contempt for the Catholic Church outside Egypt, for the 600 bishops of Chalcedon, for the 1500 of the Euclym, for Rome and the whole West. But
EUTYCHIANISM

He consistently anathematized Eutyches for his denial that Christ is consubstantial with us.

5. In the next generation Severus, Bishop of Antioch (511–39), was the great Monophysite leader. In his earlier days he rejected the Henoticion of Zeno, but when a patriarch he accepted it. His contemporaries accused him of contradicting himself in the attempt, it seems, to be comprehensive. He did not, however, conciliate the Incorrupticide, but maintained the corruptibility of the Body of Christ. He seems to have admitted the expression κατὰ δόξαν φωτείαν. Chalcedon and Pope Leo I treated it as Nestorian, as Hyperus did, or at least as a heretical mixture of Nestorian and Monophysite. He did not allow the Humanity to be a distinct monad; but this is no more than the view of many modern Catholic theologians that it has no esse of its own. (So St. Thomas, III, Q. xvi, a. 2; see Janssen, De Deo-homine, pars prior, p. 607, Freiburg, 1901.) It need not be understood that by thus making a composite hypostasis Severus renounced the Cyprian doctrine of the unchanged nature of the Word after the unconfused union. Where he is most certainly heretical is in his conception of one nature not Divine (so Cyril and Hyperus) but theandric, and thus a composition, though not a mixture—φως τηθανάτου. To this one nature are attributed all the activities of Christ, and they are called "theandric" γενεσία τηθανάτου, identical in name with the activities of human activities as by the Catholic doctrine. The undivided Word, he said, must have an undivided activity. Thus even if Severus could be defended from the charge of strict Monophysitism, in that he affirmed the full reality of the Human Nature of Christ, though he refused to it the name of nature, yet at least he appears as a dogmatic Monothelite. This is the more clear, in that the crucial question of one or two wills, he pronounces for one theandric will. On the other hand utterances of Severus which make Christ's sufferings voluntarily permitted, rather than naturally necessitated by the treatment inflicted on His Body, might perhaps be defended by the consideration that from the union and consequent Beatific Vision in the Soul of Christ, would congruously ensue a beatification of the Soul and a spiritualizing of the Body, as was actually the case after the Resurrection; from this point of view it is true that the possibility of the Humanity is voluntary (that is, decreed by the Divine will and not due to it in the state which is connatural to it after the union; although the Human Nature was necessarily created before the union). (St. Thomas, III, Q. xiv, a. 1, ad 2.) It is important to recollect that the same distinction has to be made in considering whether the Body of Christ is to be called corruptible or incorruptible, and consequently whether Catholic doctrine on this point is in favour of Severus or of his adversary Julian. The words of St. Thomas may be borne in mind: "Corruptio et moris non competit Christo ratione suppositi, secundum quod attenditur unitas, sed ratione naturae, secundum quam inventur differentia mortis et vitae." (III, Q. 1, a. 5, ad 2.) As the Monophysites discussed the question ratione suppositi (since they took nature to mean hypostasis, and to imply a supposition) they were bound to consider whether the Body of Christ incorruptible. We must therefore consider the Julianists more carefully.

6. Julian, Bishop of Helicarnassus, was the leader of those who held the incorruptibility, as Severus was of those who held the corruptibility. The question arose in Alexandria, and created great excitement, when the two bishops had taken refuge in that city, soon after the accession of the orthodox Emperor Justin, in 518. The Bishop of Alexandria, Severus, was accused by Severus of the See as a corruptible Cyprian and Eutychian, and the latter retorted by entitling the Julian "Αναπροσοκοτίσας and Phantasmatics, as renewing the Docetic heresies of the second century. In 537, the two parties elected rival patriarchs of Alexandria, Theodosius and Gaianas, after whom the Corrupticide were known as Theodosians, and the Incorrupticide as Gaianites. Julian considered, with some show of reason, that the doctrine of Severus necessitated the admission of two natures, and he was unjustly accused of Docetism and Manicheanism, for he taught the reality of the Humanity of Christ, and made it incorruptible not formularis qui human, but as united to the Word. His followers, however, split upon this question. One party adopted a potential corruptibility. Another party taught an absolute incorruptibility of the Word; τοῦτο προς ἕτερον, flowing from the unchangeable Word. A third sect declared that the Humanity obtained the prerogative of being unchangeable; they were called Actistae, and refuted by denouncing their opponents "Criostolaters" or worshippers of a creature. Heresies, after the analogy of low forms of physical life, tend to propagate by division. So Monophysitism showed its nature, once it was separated from the Catholic body. The Emperor Justinian, in 565, adopted the incorruptibilist view, and made it a law for all bishops. The troubles that arose in consequence, both in East and West, were calmed by his death in November of that year.

7. The famous Philoxenus or Xenaias (d. soon after 518), Bishop of Mabug (Mabbug, Mambuce, or Hierapolis in Syriac Euphrasitis), is best known to-day by his works in the language of the Syrian Church (471–78), which were given to the world by Thomas of Harkel, and is known as the Harkelean or Philoxian text. It is unfair of Hefele (Councils, tr. III, 453–60) to treat him as almost a Docetist. From what can be learned of his doctrines they were very like those of Severus and of Hyperus. He was a Monophysite in words and a Monothelite in reality, for he taught that Christ had one will, an error which it was almost impossible for any Monophysite to avoid. But this μετα φύσις συνθέτης was no doubt meant by him as equivalent to the hypostasis composita taught by St. Thomas. As Philoxenus taught that Christ's sufferings were by choice, he must be placed on the side of the Julianists. He was careful to deny all confusion in the union, and all transformation of the Word.

8. Peter Fullo, Patriarch of Antioch (471–88), is chiefly famed in the realm of dogma for his addition to the Trisagion or Tersanctus, "Agios o Theos, Agios Ichiros, Agios Athanatos", of the words "who was crucified for us". This is plain Patrapiasianism, as far as words go. It was employed by Peter as a test, and he excommunicated all who refused it. There is no trace of a reality of the suffering of the Divine Nature by the communicatio idiomatum, for it is not merely the Divine Nature (in the sense of hypostasis) of the Son which is said to have been crucified, but the words are attached to a three-fold invocation of the Trinity. Peter may therefore be considered as a full-blooded Monophysite, who carried the heresy to its extreme, so that it involved error as to the Trinity (Sabellianism) as well as with regard to the Incarnation. He did not admit the addition of the words "Christ our King" which his orthodox rival Calendo added to his formula. Some Syrian monks of Constantinople, led by John Maxentius, before the reconciliation with the West in 519, upheld the formula, "one of the Trinity was crucified" as a form of exclusion, but Peter Fullo put the one hand and Nestorianism on the other. They were orthodox adherents of the Council of Chalcedon. Pope Hormisdas thought very badly of the monks, and would do nothing in approval of their formula. But it was approved by John 11, in 531, and imposed under anathema by the Second Council of Constantinople in 533, which closed the so-called "Theopaschite controversy.

9. We have further to catalogue a number of sub-divisions of Monophysitism which pululated in the sixth century. The Agnoscitae were Corrupticide, who denied completeness of knowledge to the Human
EUTYCHIANISM

Nature of Christ; they were sometimes called Themis-
tians, from Themistus Calonymus, an Alexandrian
deacon, their chief writer. They were excommuni-
cated by the Patriarchs of Alexandria, Timotheus
(d. 527) and Theodosius. Their views resemble the
"Kenotic" theories of our own day. The Triteists,
or Triteiates, or Condobandites, were founded by a
Constantinopolitan philosopher, John Asconagus, or
Asenagheus, at the beginning of the sixth century,
but their principal teacher was John Philoponus, an Alex-
andrian philosopher, who died probably towards the
end of that century. These heretics taught that there
were three natures in the Holy Trinity. The Triteists,
whether the body is corruptible, its form is not. The
Triteiates were excommunicated by the Jacobite Pa-
triarch of Alexandria, Damian (577), who found the
unity of God in a πρότεστις distinct from the three
Persons, which he called æquivalent. They, like their
counterpart was a monk Athanasius, grandson of the Empress
Theodora, wife of Justinian. He followed the view of
Theodorus, that the bodies to be given in the resur-
rection are new creations. Stephen Goban was an-
other writer of this sect. Their followers were called
Athanasians or Philoponiaci. Athanasius was op-
posed by Conon, Bishop of Tarsus (c. 600), who event-
ually anathematized his teacher Philoponus. The
Cononites are said to have urged that, though the mat-
ter of the body is corruptible, its form is not. The
Triteiates were excommunicated by the Jacobite Pa-
triarch of Alexandria, Damian (577), who found the
unity of God in a πρότεστις distinct from the three
Persons, which he called æquivalent. They, like their
followers joined the Catholics, when they found them-

History.—Of the origin of Eutychianism among
the Cyriacian party a few words were said above. The
controversy between Cyril of Alexandria (c. 413) and
Dioscurus, of Alexandria, was continued by those who
characterized the distinctions made by those who
allowed only one nature as half-hearted. Many of his
followers joined the Catholics, when they found them-

The trial of Eutyches, by St. Flavian at Constantinople, brought
matters to a head (see EUTYCHES). Theodosius II
convened an ecumenical council at Ephesus, in 449,
over which Dioscurus, the real founder of Monophysite-
ism, presided (see EPHESUS, Council of). St. Leo had already condemned the teaching
of one nature in his letter to Flavian called the tome, a
masterpiece of exact terminology, unsurpassed for
clearness of thought, which condemns Nestorius on
the one hand, and Eutyches on the other (see Leo I,
Pope). After the council had acquitted Eutyches, St.
Leo insisted on the signing of this letter by the Eastern
bishops, a request granted by those who were
the disgraceful scenes at Ephesus. In 451, six hun-
dred bishops assembled at Chalcedon, under the presi-
dency of the papal legates (see CHALCEDON, COUN-
CIL OF). The pope's view was assured of success be-
forehand by the support of the new Emperor Marcian.
Dioscurus of Alexandria was deposed. The tome was
accepted by the Eastern bishops, but by those of the
Egyptian bishops present, for these declared their
lives would not be safe, if they returned to Egypt after
signing, unless a new patriarch had been appointed.
The real difficulty lay in drawing up a definition
of faith, produced a colourless document (no longer extant),
using the words ἔν δίοι φύσεως, which Dios-
curus and Eutyches might have signed without diffi-
culty. It was excitedly applauded in the fifth session
of the council, but the papal legates, supported by the
imperial commissioners, would not agree to it, and de-
clared they would break up the council and return to
Italy, if it were pressed.

The few bishops who stood by the legates were of the
Antiochian party and suspected of Nestorianism by
many. The emperor's personal intervention was in-
voked. It was demonstrated to the bishops that to
return to the council immediately would be to
accept the first definition as the second was to agree with Dioscurus and not with the pope,
and they yielded with a very bad grace. They had
accepted the pope's letter with enthusiasm, and they
had deposed Dioscurus, not indeed for heresy (as Ana-
tolius of Constantinople had the courage, or the impu-
dence, to point out), but for violation of the canons.
To side with him meant punishment. The result was
he was drugged up by a new committee of the famous
Chalcedonian definition of faith. It condemns Mono-
physitism in the following words: "Following the holy
Fathers, we acknowledge one and the same Son, one
Lord Jesus Christ; and in accordance with this we all
teach that He is perfect in Godhead, perfect also in
Manhood, truly God and truly Man, of a rational soul
and body. Thus begotten of the Father, He is His
Godhead, and consubstantial with us as regards
His Manhood, in all things like unto us save for sin;
begotten of His Father before the worlds as to His
Godhead, and in the last days for us and for our salva-
tion [born] of Mary the Virgin Theotokos as to His
Manhood; one and the same Christ, Son, Lord, Only-
begotten, made known as in two natures [the Greek
word φύσεως is translated in the Syriac and Latin
version by the Latin "natures", the word "natures"
shows that the Latin "in" is correct without
corruption or change, indivisibly, inseparably [ἐν
δίοι φύσεως ἃντραχτιος, ἄρτις, ἀναστάτως ἐν δύο
φύσεως ἀντικλητικος] the distinction of the two natures being in
no wise removed by the union, but the properties
of each nature being rather preserved and concurring in
one person. This doctrine is not in the article of
faith, and the Fathers of the Council of Chalcedon,
the Creed, the Pope and the Holy Fathers have a
right to explain this doctrine in so many words as
are necessary, and the Holy Fathers have done this,
and none but the Holy Fathers have this right.
This definition is worthy of all praise, and the
bishops of the Eastern Churches are not to rise
against it, as they have done at the Council of
Ephesus, and if they do rise against it, we shall have
no communion with them. Moreover, if any bishop
or other person shall rise against it, he shall be
deposed, and shall be put to the same properties as
Dioscorus and Eutyches. The very name of
Eutychianism is anathema to the Holy Church, and
we shall excommunicate any man who shall rise
against it, and we shall cast him from communion,
and again and again and again. This definition
shows all the secrets of the Greek and the Latin
Church. This is the faith of the fathers, this is the
faith of the Church. We accept this definition and
believe it. Amen."

So Monophysitism was exorcised; but the unwilling-
ness of the larger number of the six hundred Fathers to
accept the definition of Chalcedon was so great that the
historical account of the Council is this, that a doctrine
which the Creed did not declare, which the Fathers did
not unanimously witness, and which some eminent
Saints had almost in set terms opposed, which the
whole East refused as a symbol, not once, but twice,
priest by patriarch, metropolitan by metropolitan,
first by the mouth and then by the hand of a mouth
thrice hundred of his brethren, now confused upon the
grounds of its being an addition to the Creed, was forced upon the Council, not indeed as a
Cred, yet, on the other hand, not for subscription
merely, but for its acceptance as a definition of faith
under the sanction of an anathema, forced on the Coun-
cil by the resolution of the Pope of the day, acting
through a sordid and scandalous and base
Theodosius issued edicts against the Eutychians, in
March and July, 452, forbidding them to have priests,
or assemblies, to make wills or inherit property, or
to do military service. Priests who were obstinate in
error were to be banished beyond the limits of the
country. The decision of the Council of Chalcedon was over.
A monk named Theodosius, who had been punished at Alexandria for blaming Dios-
curus, now on the contrary opposed the decision of the
council, and going to Palestine persuade the
many thousands of monks there that the council had taught plain Nestorianism. They made a raid upon Jerusalem and drove out Juvêna, the bishop, who would not renounce the Chalcedonian definition, although he had been before one of the heads of the Robber Council. Houses were set on fire, and some of the orthodox were slain. Theodosius made himself bishop, and throughout Palestine the bishops were expelled and new ones set up. The Bishop of Sichætopolis lost his life; violence and riots were the order of the day. Eudocia, widow of the Emperor Theodosius II, but ignored by the council, and whom the emperor expected to support the insurgent monks. Marcian and Pulcheria took mild measures to restore peace, and sent repeated letters in which the real character of the decrees of Chalcedon was carefully explained. St. Euthymius and his community were almost the only monks who upheld the council, but this influence, together with a long letter from St. Leo to the excited monks, had no doubt great weight in obtaining peace. In 453, large numbers acknowledged their error, when Theodosius was driven out and took refuge on Mount Sinai, after a tyranny of twenty months. Others held out on the ground that it was uncertain whether the pope had ratified the council. It was true that he had annulled its disciplinary canons. The emperor therefore wrote to the pope that an election had been made in which the pope sent at once, at the same time thanking Marcian for his acquiescence in the condemnation of the twenty-eighth canon, as to the precedence of the See of Constantinople, and for repressing the religious riots in Palestine.

In Egypt the results of the council were far more serious, for nearly the whole patriarchate eventually sided with Dioscorus and has remained in heresy to the present day. Out of seventeen bishops who represented, at Chalcedon, the hundred Egyptian bishops, only four had the courage to sign the decree. These four returned to Alexandria, and peaceably ordained the archdeacon, Proterius, a man of good character and venerable by his age, in the place of Dioscorus. But the deposed patriarch was popular, and the thirteen bishops, who had been allowed to defer signing the tome of St. Leo, misrepresented the teaching of the council as contrary to that of Cyril. A riot was the result. The soldiers who attempted to quell it were driven into the ancient temple of Serapis, which was now a church, and it was burnt over their heads. Marcian retaliated by depriving the Very Rev. Dr. Baradai of his see. The following day there was a riot and firing of privi- leges. Two thousand soldiers reinforced the garri- son, and committed scandalous violence. The people were obliged to submit, but the patriarchate was saved only under military protection. Schism began through the retirement from his communion of the priest Timo- thy, called Eulurus, "the cat", and Peter, called Mongus, "the horse", a deacon, and these were joined by four or five bishops. When the death of Dioscorus (September, 454) in exile at Gangra was known, two bishops consecrated Timothy Eulurus as his successor. Henceforward almost the whole of Egypt acknowledged the Monophysite patriarch. On the arrival of the news of the death of Marcian (February, 457), Pro- terius was murdered in the church of St. Mark. His deacon, Eulurus, was also replaced by Monophysites. The new emperor, Leo, put down force by force, but Eulurus was protected by his minister Aspar. Leo wished for a council, but gave way before the objections made by the pope his namesake, and the difficul- ties of assembling so many bishops. He therefore sent queries throughout the Eastern Empire to be answered by the bishops, as to the veneration due to the name of Chalcedon and as to the ordination and the conduct of Eulurus. As only Catholic bishops were consulted, the replies were unanimous. One or two of the provincial councils, in expressing their indignation against Timothy, added the proviso "if the reports are inaccurate", and the bishops of Pamphylia point out that the decree of Chalcedon is not a creed for the people, but a test for bishops. The letter, still preserved (in Latin only) under the name Encelia, or Codex Encelius, bears the signatures of about 260 bishops, but Nicephorus Callistus says, that there were altogether more than a thousand, while Eulogius, Pa- triarch of Alexandria in the days of St. Gregory the Great, puts the number at 1600. He says that only one bishop, the aged Amphilochnus of Side, disserted from the rest of the bishops. He is supported by Nodatus Bibl., (Cxxx., p. 283). This tremendous body of testimonies to the Council of Chalcedon is little remembered to-day, but in controversies with the Monophysites it was in those times of equal importance with the council itself, as its solemn ratification.

In the following year Eulurus was exiled, but was recalled in 475 during the short reign of the Monophysite usurper Basiliscus. The Emperor Zeno spared Eulurus from further punishment on account of his great age. That emperor tried to reconcile the Monophysites by means of his Heniochon, a decree which dropped the Council of Chalcedon. It could, however, please neither side, and the middle party which adhered to it and formed the official Church of the Eugenian Synod fell into schism. At Alexandria, the Monophysites were united to the schismatic Church of Zeno by Peter Mongus who became patriarch. But the stricter Monophysites seceded from him and formed a sect known as Aecephali (q.v.). At Antioch Peter Fulko also supported the Heniochon. A schism between East and West lasted through the reigns of Zeno and his more diligent successor Anastasius. The efforts of the popes, especially the great St. Gelasius (q.v.). In 518, the orthodox Justin came to the throne, and reunion was consummated in the following year by him, with the active co-operation of his more famous nephew Justinian, to the great joy of the whole East. Pope Hormisidas (q.v.) sent legates to reconcile the patriarchs and metropolitans, and in every effort of the popes, especially the great St. Gelasius (q.v.). In 518, the orthodox Justin came to the throne, and reunion was consummated in the following year by him, with the active co-operation of his more famous nephew Justinian, to the great joy of the whole East. beggar's gab, ordaining bishops and priests everywhere in Mesopotamia, Syria, Asia Minor, in order to repair the spiritual ruin caused among the Monophysites by Justinian's renewal of the original laws against their bishops and priests. John of Ephesus puts the number of clergy he ordained at 100,000, others at 80,000. Eutychius is said to have claimed to repair the spiritual ruin caused among the Monophysites by Justinian's renewal of the original laws against their bishops and priests. John of Ephesus puts the number of clergy he ordained at 100,000, others at 80,000. Eutychius is said to have claimed to have the belief of miracles, and at least he performed the miracle of influsing a new life into the dry bones of his sect, though he was unable to unite them against the "Synodites" (as they called the orthodox), and he died worn out by the quarrels among the Monophysite patriarchs and theologians. He is believed to have lived to the time of the Emperor of Syria, Mesopotamia, and Babylonia, with Asia Minor, Palestine, and Cyprus, who have remained since his time generally united under a Patriarch of Antioch (see Jacobites). A number of these united in 1646 with the Catholic Church, and they are governed by the Syrian Archbishop of Aleppo. The rest of the Monophysites are also frequently called Jacobites. For the history of the Monophysites see ARMENIA. The Armenian Monophysite Patriarch resides at Constantinople. The Abyssinian Church was drawn into the same heresy through its close connexion with Alexandria. At least since the Monarchic of Egypt, in 641, the Abuna of the Abyssinians has always been consecrated to the Patriarch of Alexandria, so that the Abyssinian Church has always been, and is still, nominally Monophysite.

The chief materials for the general history of the Eutychians will be found in the Collections of the Councils by Marsi, Har- doces, or Labbe, that is to say the council's letters of recommendation, and other documents. To these must be added the historians EVA- GNUIS, THEODORAS, etc., and the Monophysite historians JOHN of Damascus and Nestorius (both in LAMPE'S Ancietae Syriacae, II—III, Leyden, 1857), a German translation of the latter by M. de Brosses (Paris, 1839) and an English translation by HAMILTON and BROOKS (London, 1839). The works of EUCY- CHIANUS, the Breviarium of LIBERTUS, and information imparted by Pontius are valuable. Of modern authorities, the larger and smaller histories are innumerable, e.g. BARONIUS, FLEURY, GIBSON, HEZEL, and (for the early period) TILLEMONT, XV, also the biographical articles in such large works as CAV. Biog. Litt. Fabriciae; the Kirchenlexikon; Heizos, Reuden- cikl, and Dict. Ch. Hist. Assembl. Bibl. Orient. II; WALCH, Catholic Church, 1752—53, see EGYPT, and for the Armenians see ARMENIA. EUTYCHIUS

Evangrius, surnamed Scholasticus, Ecclesiastical historian and last of the continuators of Eusebius of Caesarea, b. in 556 at Epaphras in Cilicia-Syria; d. after 594, date uncertain. He is called the Eusebian, advocate at Antioch (hence his surname) and became the friend of the Patriarch Gregory (569-594), whom he successfully defended in presence of the Emperor Maurice and of the Council at Constantinople (588). Having already been appointed quoter by Tiberius II (578-582), he received from Maurice the title of honorary prefect (ex pretiis), a product of the masters of rhetoric, made a collection of the reports, letters, and decisions which he had written for the Patriarch Gregory. Another collection contained discourses of Evagrius, among them a panegyric of the Emperor Maurice and his son Theodosius. These have all been lost. None of his works survive except his "Ecclesiastical History" in six books. In this he proceeds to write the sequel of the narrative begun by Eusebius of Caesarea and continued by Socrates, Sozomen, and Theodoret. He begins with the Council of Ephesus (431) and ends with the twelfth year of the
Evagrius, surnamed Ponticus, b. about 345, in Iborn, a small town on the shores of the Black Sea; d. 399. He is numbered among the more important ascetical writers of the fourth century. Instructed by St. Gregory Nazianzen, he was ordained reader by St. Basil the Great and deacon by St. Gregory of Nyssa (331-394). He traveled widely, and was in Constantinople (381). According to Palladius, who differs in his account from Sozomus and Sozomen, Evagrius remained for a time as archdeacon in Constantinople, while Nepartius was patriarch (381-397). Leaving the city on account of its spiritual dangers, he went first to Jerusalem and then into the Nitrian Desert, where he began an eremitical life with the guidance of Macarius the Great (333). He steadfastly refused a bishopric offered by Theophilus of Alexandria. He became very celebrated for his ascetical life and writings, though St. Jerome (e.g. Ep. 133 ad Ctesiphontem, n. 3) charges him with originalistic errors and calls him the precursor of Pelagius. The Sixth, Seventh, and Eighth Ecumenical Councils condemned Evagrius together with Athanasius, and Gennadius translated the works of Evagrius into Latin; several of them have been lost or have not thus far been recovered (P. L., XL). The best collections of his works are edited by Bigot (Paris, 1860); Gallandi, "Biblioth. vet. patr.", VII, 531-581; Migne, "P. G.", XL; cf. also Eger, "Gnomica" (Leipzig, 1892); Ziegenhain, "Evagrius Ponticus" (1885); and most helpful here: "Monachus seu de vita activa"; "Rerum monachalium rationes earumque iuventutem apodium"; "De octo vitiosis cogitationibus".

A. J. Maas.

Evangeliaria, liturgical books containing those portions of the Gospels which are read during Mass or in the course of the Church Service. The Church does not date back earlier than the seventeenth century. The Greeks called such collections Εὐαγγέλιον, "Gospel", or εὐαγγελιαν τοι ἐστίν γέγονος, "Selections from the Gospel".

The collection of readings from the Acts of the Apostles and the Epistles known as Ἀνάλογος, "Apostle", or πραγμάτων ἀποκριτών ἢ ἀποκριῶν "Practicon". In churches of the Latin Rite, the lessons from the Old Testament, the Epistles from the New Testament, and portions of the Gospels are usually grouped in the same book, under the name Comes, Liber comitis, Liber cumicus (from comes, companion), or Lectionarium. Separate Evangelia are seldom to be met with in Latin. Tables indicating passages to be read, as well as the Sundays and Holy Days on which they are to be read, are called by the Greeks "Evangelistaria", a name sometimes given to the Evangelia proper; they are also called "Synaxarium", and by the Latins as "Capitulare". Although the word Evangelarium is of recent origin, it has been universally adopted. The word Lectionarium is employed, however, to denote either the collection of passages from the Old and New Testaments, including the Gospels, or else these passages alone without the corresponding Gospels.

Evangelia and Use of Evangeliaria.—Following the custom of the Synagogue, the Scriptures of the Old Testament were read at the primitive Christian assemblies. According as the Canon of the New Testament was decided on, certain extracts from it were included in these readings. Justin tells us that in his day, when the Christians met together, they read the Memoirs of the Apostles and the writings of the Prophets (Apol., I, xxvii). Tertullian, Cyprian, and other writers bear witness to the same custom; and in the West the order of lector existed as early as the third century. For want of precise testimony we do not know how the particular passages were decided on. Most likely the presiding bishop chose them at the assembly itself; and it is obvious that on the completion of the liturgical book the Scriptural readings relating to the seasons would be read. Little by little a more or less definite list would naturally result from this method. St. John Chrysostom in a homily delivered at Antioch exords his hearers to read beforehand the Scripture passages to be read and commented on in the Office of the day (Homilia de Lazo, lli, c. i). In like manner other Churches would form tables of readings. To read in the Antiochene period it was customary to note the Sunday or festival on which that particular passage would be read, and at the end of the manuscript, the list of such passages, the Synaxarium or Capitulare, would be added. Transition from this process to the making of an Evangelarium, or collection of all such passages, was easy. Gregory is of opinion that he found written fragments of an Evangelarium in Greek dating from the fourth, fifth, and sixth centuries, and that we have very many from the ninth century onwards (according to Gregory they number 1072). In like manner, we find Lectionaries in the Latin Churches as early as the fifth century. The Canons of the Roman Church dates from before St. Gregory the Great (P. L., XXX, 487-532). From the tenth century onward, Western Churches, together with the Epistles and prayers, united in a new liturgical book, called the Missal.

Evangeliarium and the Text of the New Testament.—Evangelia have very little importance for the critique of the Gospel text. At the time when the various Gospel passages began to be collected in book-form for use in liturgical services, the Gospel text and its translations were already in existence; and those Evangelia simply reproduce the particular text favoured by the Church which compiled it. They have even exercised an unfortunate influence on the more recent MS. of the Gospels; certain additions of a liturgical nature (e.g. in illo tempore; dixit Dominus) which were set at the beginning of the readings and which do not come from the text itself. But in the official text of the Vulgate, and in editions of the Greek text of to-day, owing to the labours of Tischendorf and of Westcott and Hort, these liturgical glosses are very rare. We notice one example in the Vulgate text: Luke, viii, 31 (ali autem Dominum).

The Evangeliarium and Liturgy.—It is especially from a liturgical point of view we find the study of book. The method general of Greek Evangelia is uniform. The first part contains the Gospels of the Sundays beginning with Easter; the
second part gives the Gospels for the festivals of the saints beginning with 1 September. In the Church of the West the Gospel used in the processions is more divergent because of the various rites. And the ceremonial followed in the reading of the Gospel presents many differences between usage one church and another, which it would be too long to treat of here.

Ornamentation of Evangeliaria. From the beginning the books used in the liturgy, and more particularly the Gospel manuscripts, were highly venerated, and therefore text and cover were often richly ornamented. From an artistic point of view the distinction between Evangeliaria strictly so called and Gospel books was not always clearly recognized. It seems to have generally disregarded. It consists merely in the fact that the illuminations of the Evangeliaria occur as a rule on those pages set apart for the greater festivals of the year. The coronation oath-book of Anglo-Saxon kings, which King Athelstan received, it would appear, from his brother-in-law, Otto I, and which he in turn presented to the cathedral of Canterbury, was richly ornamented with figures of the Evangelists freely copied from those that adorn the Evangeliarium of Charlemagne preserved at Vienna. Weare acquainted with Gospels in rolls only from seeing them in miniatures, especially as emblems of the Evangelists, until well into the Middle Ages.

The roll of the Book of Joshua (ninth—tenth centuries, Vienna Library) is a specimen of what Evangeliaria in this form with miniatures were like. The roll-form remained long in use for liturgical manuscripts at Milan and in Southern Italy.

Costly Evangeliaria are noted above all for their clear and careful writing. They have helped to perpetuate and propagate certain styles of calligraphy. The forms of writing and of the initials, especially in the ninth and tenth centuries; and the Latin uncial is also employed, especially in Gaul, far into the Middle Ages for Gospel and liturgical works. The copying of the Gospels influenced largely the writings of Irish and Anglo-Saxon scribes, and effected the spread of these characters over the Continent, and the development of the Caroline minuscule and the semi-minuscule of the school of Tours. The copyists of the Gospels may with great use of other helps to beautify their penmanship, such as the use of purple parchment, of liquid gold and silver, and various coloured inks. The part played by Evangeliaria in the history of miniature painting until the twelfth and thirteenth centuries is very great. Especially noteworthy are the miniatures in the Codex Calixtini, in the Book of Hours of Henry II, Illuminated initial letters differed according to the various schools of writing: the Irish scribes used artistic knots and loops, the Merovingian and Lombard writers preferred animal forms, especially fish.

Illuminated scenes, of interest to the iconologist, are often to be met in these copies of the Gospel text. Frequently it is the figure of the Evangelist that stands at the head of his Gospel; the donor, or rather a sketch showing the donation of the book, is often found in miniatures from the days of Charlemagne to the end of the Middle Ages. The prince is shown receiving from the hands of the abbot the Evangeliarium he will use whenever he assists at the holy offices in the abbey church (cf. the picture of Charles the Bald in the Vivien Bible, Bibliothèque Nationale, Paris). But in the tenth and eleventh centuries the prince is shown offering the princeps of his diocese to the patron saint of the church or abbey (cf. the Evangeliarium at Bamberg showing the Emperor Henry II offering the book to Christ).

Among the more famous Evangeliaria may be mentioned the following: the portion of an Evangeliarium from Sinepe (sixth century; in the Bibliothèque Nationale, Paris); the Evangeliarium of Rossano (about 900; in the churches of Rabula (556, at Florence) and Etschmiadzin (miniatures of the sixth century); the Evangeliarium of Gregory I (at Cambridge) in Latin uncial; the Book of Kells (seventh to ninth century, at Dublin); the Book of Lindisfarne (eighth century, in the British Museum, London) of Irish workmanship; the Irish-Continental Evangeliarium of St. Gall (about 800); the Carlowingian Evangeliarium of Godescale (about 752, in the Bibliothèque Nationale, Paris); the Ada Codex (ninth century, at Trier); the Evangeliarium of Echternach (tenth century, at Gotha), and of the Abbess Uta (about 1002, at Munich). Valuable Evangeliaria were carefully treasured, and when used in the offices were placed on a strip of cloth or on a cushion. The front and back of the binding was often of fine leather, and the front cover was enriched with all the skill of the goldsmith. One of the most ancient bindings or covers we possess is that offered by Queen Theodolinda (600) to the cathedral of Monza. At times plaques of ivory, resembling diptychs, were set into these bindings. The earliest of them were of Oriental or Italian origin, and best illustrated figures of Christ or the Blessed Virgin, etc. A number of them, to be found in the countries along the Rhine and the Meuse and in Northern France (tenth and eleventh centuries), have the scene of the Crucifixion.

Evangelical Alliance. The, an association of Protestants belonging to various denominations, founded in 1816, whose object, as declared in a resolution passed at the first meeting, is "to enable Christians to realize in themselves and to exhibit to others that a living and everlasting union binds all true believers together in a universal Church." (Report of the Proceedings of the First General Conference.) The points of belief, which the members accept as being the substance of the Gospel, are contained in a document adopted at the first conference and known as the Basis. They are nine in number:—

(1) The Divine inspiration, authority, and sufficiency of the Holy Scriptures; (2) the right and duty of private judgment in the interpretation of the Holy Scriptures; (3) the unity of the Godhead and the Trinity of Persons therein; (4) the utter depravity of human nature in consequence of the fall; (5) the Ineuration of the Son of God, His work of atonement for sinners, and his mediatorial intercession and reign; (6) the justification of the sinner by faith alone; (7) the work of the Holy Spirit in conversion and sanctification of the sinner; (8) the immortality of the soul, the resurrection of the body, the judgment of the world by Jesus Christ, with the eternal blessedness of the righteous and the eternal punishment of the wicked; (9) the Divine institution of the Christian ministry, and the obligation and perpetuity of the ordinances of Baptism and the Lord's Supper.—It being, however, distinctly declared that this brief summary is not to be regarded, in any formal or ecclesiastical sense, as a creed or confession, nor the adoption of it as involving an assumption of the right authoritatively to define the limits of Christian brotherhood, but simply as an indication of the class of persons whom it is desirable to embrace within the Alliance. In this Alliance, it

V.—41
is also distinctly stated that no compromise of the views of any member, or sanction of those of others, on the points wherein they differ, is either required or expected; but that all are held free as before to maintain and advocate their religious convictions, with due forbearance and brotherly love. It is not contemplated that the Alliance should assume or aim at the character of a new ecclesiastical organization, claiming and exercising the functions of a Christian Church. Its simple and comprehensive object, it is strongly felt, may be successfully promoted without interfering with, or disturbing the order of, any branch of the Christian Church to which its members may respectively belong." The Alliance thus lays claim to no doctrinal or legislative power, to a paramount authority by the body itself this feature is thus explained: "Then it is an Alliance—not a union of Church organizations, much less an attempt to secure an outward uniformity—but the members of the Alliance are allies: they belong to different ecclesiastical bodies—yet all of the One Church. They are of different nations as well as of many denominations—yet all holding the Head, Christ Jesus. They are members of separate and distinct congregational bodies. We are gathered together in Christ, banded together for common purposes, and to manifest the real unity which underlies our great variety. We are all free to hold our own views in regard to subsidiary matters, but all adhere to the cardinal principles of the Alliance as set forth in its Basis." The Alliance arose at a time when the idea of unity was not generally held in the minds of the people. When the year 1842 witnessed the beginning of the Oxford Movement in the Church of England, there progressed a movement in favour of union among men whose sympathies were diametrically opposed to those of the Tractarians, but who in their own way longed for a healing of the divisions and differences among Christians. In 1842 the Presbyterian Church of Scotland tried, though without success, to effect a union with the other Presbyterian bodies. In England the progress of the Tractarian Movement led many distinguished Evangelical Non-conformists to desire "a great confederation of men of all Churches who were loyal in their attachment to Evangelical Protestantism in order to defend the faith of the Reformation" (Dale, History of Eng. Congregationalism, p. 237). To this end, the annual assembly of the Congregational Union held in London, May 1842, John Angell James (1785-1859), minister of Craven Chapel, Bayswater, London, proposed the scheme that ultimately developed into the Evangelical Alliance. He asked: "Is it not in the power of this Union to bring about by God's blessing, a Protestant Evangelical Union of the whole body of Christ's faithful followers war against all differences from this principle? ... Let us only carry out the principle of a great Protestant Union and we may yet have representatives from all bodies of Protestant Christians to be found within the circle of our own United Empire" (Congregational Magazine, 1842, 435-6). The first definite step towards this was taken by Mr. Patton, and Rev. Mr. Burton, who experienced delegates from various bodies, with the result that a preliminary meeting was held at Liverpool in October, 1845, at which the basis of such a conference was arranged. On 19 Aug., 1846, at a meeting of eight hundred delegates, representing fifty denominations, held in the Freemasons' Hall, London, the Evangelical Alliance was founded. All who would accept the Basis were eligible and admitted as members. Representatives of the various nations were recommended to form national organizations or branches, of which the British Organization, formed in 1846, was the first. These organizations were independent of one another and were at liberty to carry on their work in such a manner as should be most in accordance with the peculiar circumstances of each district. They have in fact been formed in the United States, Germany, France, Switzerland, Holland, Sweden, Italy, Turkey, Australia, India, and several missionary countries. The French national branch abandoned the Basis in 1851 and substituted for it a wider form of a Unitarian character. The Alliance meets and acts as a whole only in the international and general conferences, which are held from time to time. The first of these was held in London, 1841, and has been succeeded by others as follows: Paris, 1855; Berlin, 1857; Geneva, 1865; New York, 1867; New York, 1873; Basle, 1879; Copenhagen, 1881; Florence, 1891; London, 1896 (Celebration of the Jubilee); London, 1907, on which occasion the Diamond Jubilee of the Alliance was celebrated.

These international conventions are regarded as of special value in the promotion of the aims of the Alli-

ance. A paper by the teacher of the University of Pennsylvania,ad. 1837-1841, which is attached is the annual "Universal Week of Prayer," observed the first complete week in January of each year since 1846. At this time the Alliance invites all Christians to join in prayer, the programme being prepared by representatives of all denominations and printed in many different languages. The relief of persecuted Christians is another department of work in which the Alliance claims to have accomplished much good. Finally, in 1905, the Alliance Bible School was founded with headquarters at Berlin, under the direction of Pastor Köhler and Herr Warns, "to place before the students the history and doctrine of the Bible in accordance with its own teaching." The reports of the conferences claim considerable suc-

cess; these, together with the work of the various branches, are reported annually. The character of the Alliance is necessary opposed to the doctrine and au-

thority of the Catholic Church; and Catholics, while sympathizing with the desire for union among Chris-

tians, realize that the unity by which we are made one in Christ is not to be won by such methods. The success of the Alliance is Unum corpus sumus in Christo.

EDWIN BURTON.

Evangelical Church (in Prussia).—The sixteenth-century Reformers accused the Catholic Church of having adulterated the primitive purity of the Gospel by the admixture of un-scriptural doctrines and practices; consequently they designated themselves as "Evangelicals," or followers of the pure Evangel, in contradistinction to the un-evangelical followers of Roman traditions and institutions. Almost from the beginning the new evangelicals of the German Reformation did not break entirely with the Catholic Church; in fact, Luther and the Reformed, then into a multitude of sects which baffles the skill of statisticians. The cleavage arose through differences in the doctrine of Christ's presence in the Holy Eucharist. Luther taught the actual bodily presence of Christ in and with the elements, though denying Transubstantiation. Zwingli and the other Reformed leaders admitted the Real Presence, but they so interpreted it that the Lutherans and the Reformed Churches form the two great branches of Evangelical Protestantism to which all the other divisions of Protestants are subordinate. The evangelical section of the Anglican Church stands midway between the High Church and the Lati-

tudinarian Low Church. As a proper name with strictly religious significance, England is often referred to as the Anglican Church. It applies to a branch of the Protestant Church in Germany, formed in 1817 at the instance of King Frederick William III of Prussia, by a union of the Lutherans and the Reformed Churches.

History.—At the beginning of the nineteenth cen-

tury religious life in Germany was at a low ebb. The Rationalism and Illuminism of the eighteenth century, openly encouraged by King Frederick II (the Great), had told severely on the supernatural life of the coun-
try, especially among the Protestants. The “rights of man,” proclaimed and ruthlessly carried out by the French Revolutionists, had found a welcome beyond the Rhine and well nigh superseded the rights of God. Luther and Calvin, whilst casting off the authority of the Church, had still bowed to that of the Bible, and their followers adhered to several “Confessions of Faith” as binding on their conscience. These formulæ were now overthrown as inimical to the rights of free inquiry, as the work of men little versed in exegesis and history, as unscientific and un-Protestant. Religious life, the movement of its soul, was rapidly withering away. Indifference and unbelief, finally, from the pressure of the times, threatened differences among Protestant communities and threatened for a time to sweep away Christianity itself.

The Prussian State, owing its origin, growth, and importance to Protestantism, was not sympathetic to its Catholic subjects. The Rhine Province, Westphalia, and the Polish provinces were ever ready to manifest their affection for the Catholic rulers of Austria and even of France. The House of Hohenzollern was Calvinist, the majority of the nation was Lutheran. Frederick William III, King of Prussia (1797–1840), undertook to strengthen his rule and his country by building up a united religion together with a powerful army, efficient schools, and a flourishing trade. As early as 1814, the United Reformers and the Lutheran Churches by means of a common “Agenda”, or ritual. He matured the idea on his visit to England in 1814, and made the first arrangement for a union and a new liturgy in St. James’s Palace in London. It was proposed to celebrate in Germany the third centennial jubilee of the Reformation, and in anticipation of this festival he issued on 28 September 1787 a royal decree that it was the royal wish to unite the separate Lutheran and Reformed Confessions in his Dominions into one Evangelical Christian Church, and that he would set an example in his own congregation at Potsdam by joining in a united celebration of the Lord’s Supper at the approaching festival of the Reformation. It was not intended to do away with the Lutheran, or vice-versa, but to establish one Evangelical Church, quickened with the spirit of the Reformation. The epitome “Protestant” was avoided as too partisan; prominence was given to the vague term evangelical; Lutherans and Calvinists, whilst maintaining their own specific doctrines, were to form a single church under a single government and to preserve the unity of the princes.

The execution of the royal plan was entrusted to the provincial consistories, synods, and clergy generally. The Synod of Berlin and nearly all the clergy and laity of Prussia responded cordially to the decree. External union, facilitated by the prevailing religious indifference, was adopted in Nassau and in the Rhenish Palatinate (1798), in Baden (1821), in Rheinisch Hesse (1822), in Württemberg (1827). But Saxony, Hanover, and Bavaria proper were too exclusively Lutheran, while Switzerland was too exclusively Reformed to join the Evangelical Church, and the Austrian Protestants also divided their allegiance between the Helvetic and the Augsburg Confessions. Instead of the former two Protestant bodies in Germany, there were now three—Protestants, Lutherans, and the united Evangelical. The Reformed was the weakest in numbers; and in doctrine its sole distinctive tenet was the rejection of Luther’s teaching concerning the Eucharist. Neither was the Lutheran flourishing; true Lutheranism existed only in the pious aspirations of a few theologians, pastors, and jurists. A union without a unified church, the Lutheran, is but a locum tenens, unworthy to be called a church. Frederick William, therefore, attempted to consolidate his Evangelical Church by giving it a common liturgy composed by himself with the assistance of the court chaplains and a pious layman. This “Agenda” was made obligatory by royal order for the royal chapel, the cathedral of Berlin, and for the army; its general adoption was only recommended. It met with determined opposition as a measure oppressive of evangelical freedom, antiquated, leaning to “Romanish” practices, unsettling men’s consciences. None the less, by 1825 it had been adopted by 5333 churches out of 7752. The Protestant bishops Eylert and Neander in Berlin were in favour of it and of the measures taken to enforce it. In 1828–29 the “Agenda” was issued in a revised form and made binding on all Protestant churches, some concessions being granted to Silesia, Saxony, and the provinces of the kingdom, but not to deference to provincial uses. The Lutherans, fearing the loss of their confessional status, offered increased resistance. But the king was inexorable. Dr. Scheibel, professor in Breslau, and others of the Lutheran clergy who had refused to accept the new liturgy, were suspended from their offices. For several years a fierce persecution raged against the “Old Lutherans”, especially in Silesia and the Grand Duchy of Poznan. Preacher Hahn headed the troops which were sent to subdue the recusant villagers by seizure of their goods, imprisonment, and all manner of violence. Minister von Altenstein justified these measures on the principle that it was the Government’s duty to protect its citizens from the blind, senseless consequences of their own folly. Thousands of the recusants were driven to emigrate to America and Australia. Not a voice was raised in their defence; the whole Liberal press lauded the energy of the Prussian Government. By a royal decree of 25 Feb., 1834, all Lutheran worship was declared illegal.

Frederick William III ruled his Church as summus eclesiasticus, as a pope without a fixed deposit of faith to guard, or a hierarchy Divinely ordained to co-operate with him. The result was arbitrariness in the rule, disorganization in the ruled. The king’s first royal decrees aimed at the conciliation of religion with the prevailing rationalistic philosophy, but the misfortunes of the year 1806 and the death of his beloved wife who turned his mind more and more to the religion of revelation and mysteries. Considering himself the protector and leader of the Church in Germany he endeavoured to raise it from degradation by forcing unity upon it with a strong hand; unity not in dogma, for he disliked theologians “who pretend to be more Christian than Christ”, but in liturgy, wherein his sincere piety found sufficient satisfaction. In 1831 the Synod formally decreed that the king, by possession of the power of the keys and the binding and loosing power in the Church; it contained an attempt to reintroduce auricular confession and the old church discipline. All his efforts, however, only ended in greater division. At his death, in 1840, the Church of his creation was still a chaos of warring sects, irresponsible to the brooding of the royal mind and restive to the royal arm.

Frederick William IV immediately set free the imprisoned Lutheran clergy and allowed the formation of separate congregations. The Old Lutherans now founded a “separate Lutheran Church” at Breslau under the direction of the lawyer Huchke. By the “general concession” of 1845 they were recognized as Dissenters with the right to hold their meetings in the old church buildings, to retain their separate support from the State. The new sect was, however, wanting in union and cohesion: Diedrich opposed Huchke and the Oberkirchenkollegium (supreme ecclesiastical council); frictions among members were frequent occurrence. But few of the discontented clergymen had left the established Evangelical Church to join the Old Lutherans; the majority remained at their posts for various reasons: within the Union they had a better opportunity for working its destruction than without; they were unwilling to sacrifice their incomes from the State and consequent independence from the financial support of their pa-
rishioners; they feared, in many cases, to be altogether abandoned by indifferent congregations. The defenders of the union argued that its disruption would produce at least five particular churches at war with one another and powerless to withstand the inroads of the Catholic Church; that the union was a Prussian achievement to be supported by all true lovers of Prussia. The theologians of the Union demanded a consensus-symboolum, "an ordination formula in which the consensus of the two Churches was to be contained without depriving the individual congregation of the right of freedom of faith and the right of the confessional" (Gardiner, I, 907); others were satisfied with a confederation professing no formulated creed and resting solely on unroted science. The trend of religious thought during this period, the middle of the nineteenth century, followed the impulse given by the king. Frederick William IV's motto was: "I and my house intend to serve the Lord." He was piously, even pietistically, inclined, hated infidelity and pantheism, cherished the Divine right of kings, and loved to dream of ancient institutions in Church and State. In a short time the Prussian universities, and in their wake the other German universities, except Giessen and Jena, became centres of positive beliefs and tendencies. The king favoured men of his own thinking and was helped by the government, which issued decrees to the end that "the duties of his "supreme episcopate" to free parishes formed on the apostolic model. Theological teaching in schools and press, although starting from the same positive creeds, diverged in two different streams. On the one side there were the partisans of a via media, endeavouring to find the common mean between the Lutheran and Reformed modes of thought. On the other side stood the Neo-Lutherans. These theologians held to Luther's doctrine on justification but rejected his invisible Church and universal priesthood; they defended a Divinely ordained hierarchy, and their teaching on sacrifice, orders, and sacraments nearly approached the Roman. This current was opposed by a series of decrees (1846) which tended to strip the Lutheran Church of power. The councils of the period were dissolved, and the king himself was even accused of being a Romanist in disguise. The crucial task of the synod was to find an acceptable formula of concord. Karl Immanuel Nitzsch, of Bonn, set up a profession of faith intended to take the place of the reformed formularies: it consisted of vague Biblical texts into which both Lutherans and Anglicans would easily read their particular doctrines or no particular doctrine at all. The synod accepted the formular while the country received it with scorn and contempt, and it was rejected by everyone. Hengstenberg in his "Kirchenzeitung" branded the synod as a Robber Synod, a denk of Christ; its decrees were not to be obeyed and had no authority; they gave expression to "the general Protestant conscience." The consensus only served to increase existing dissensions. The most vital questions divided the leading minds: Was the territorial ruler by right the summus episcopus within his territory? Was it advisable to impose an evangelical church discipline, and if so, which? What part was to be conceded to laymen in the ministry of the Word and of the sacraments? The consensus only served to increase existing dissensions.

The very sterility of controversy turned some practical men from words to works: the "Inner Mission" was originated (1818) by Wickean, the founder of the Hamburg Rauehs Haus (properly Ruwe's House, from the name of its former occupant), an institution which covers almost the whole field of Christian charity. The preacher Friederich (d. 1864) instituted the order of Protestant deaconesses, an imitation of the Catholic Sisters of Charity in the main objects of their life. Court preacher Zimmermann of Durlmstadt founded the Gustav-Adolfs-Verein (1812-2), a union whose avowed primary object is to support the evangelical missions in outlying districts (the Diaspora), its second object being to bind together all Protestants regardless of denominational differences, and to oppose a solid bulwark to the encroachments of Catholicism. The secondary object caused a split in the Union. At the annual meeting of the Congregation of the Königsberg preacher Rupp, who had been deprived of his office for breaking away from the Protestant formularies and from the national Church, presented himself as a deputy. On the question of his admission as such the assembly disagreed: Rupp was, however, excluded by a small majority, a distinct breach of the principles of the Union. The meeting of 1847 resolved that henceforth the Union should direct its main efforts to the "conversion of the Roman Catholics," a resolution to which it has remained faithful to this day.

The short-lived movement of the "Protestant Friends," or "Friends of Light," was started in opposition to pietistic orthodoxy which threatened freedom in teaching. Another of the Reformations was the Moravians from the Moravian settlement at Gnadenau, in 1811, runs: "We hold it to be our right and our duty to submit to the test of our reason whatever is set before us as religion." Ulich, a simple-minded man who had the gift of popular preaching, and Pastor Wislicenus, a downright Rationalist, were the soul of this movement. The Berlin magistrates permitted them to preach in fourteen parishes while the new Synod of 1841 had declared them received in the spirit of the Protestant Friends. They entreated him to grant the Church a free constitution in keeping with the needs of the time, and freedom of teaching limited only by public morality and the safety of the State. The king in person received his theological municipality, who paraded in fourteen chariots, and received a royal address from theSynod of Moravians. Their meetings were prohibited, but Rupp, Ulich, and Wislicenus resisted until 1841, new dissenters were allowed to separate from the Established Church without the loss of their civil rights; yet not without many vexatious formalities and expenses. The Free Communities want the internal cohesion to resist the royal disfavour and the easeless assaults of the dominent pietist clique, came to a speedy end.

The wave of liberal aspirations which rolled over Europe in 1848 left its mark on the Churches in Prussia. Paragraph 15 of the new Constitution read: "The Evangelical, and the Roman Catholic Church, and every other religious society, orders and minorities its civil affairs according to its own conscience, subject only to the inherent right which no law can take from him; in fact Par. 15 makes the territorial lord quite independent of all State interference with his management of his own Church. The king himself did not favour this extraordinary doctrine. "Do I look like a bishop?" he said, pointing to his uniform and spurs. His ideal
was "the small independent Christian community managing its own affairs in the spirit of the universal Church" as in the days of the Apostles. The ideal of his minister von Raumer and of Hengstenberg was to train Prussian Unterthänenerwander, i.e. a mentality fit for people under strict authority: believe in Luther, obey the king, and ask no questions. The alliance of politics, Lutheran orthodoxy and pietism, royal cabinet-orders and counter-orders, general unsetledness and factionalism, under the state, was a result of one—such was the result of the Union of 1817 in the fourth decade of its existence. Many attempts at a more real and more general union were made on the basis of practical charity, federation, opposition to Catholicism; church conferences were held in Berlin, Wittenberg, Eisenach, and elsewhere; the Gustav-Adolf-Verein and the Inner Mission were founded; the English Evangelical Alliance was invited to Berlin (1857). The result was greater discord and disruption.

William I, who as Regent, King of Prussia, and German Emperor reigned from 1858 to 1888, was an honest, single-minded, and industrious ruler. He had little sympathy with the Constitution and none at all with Hengstenberg's agitation for enforcing Lutheran orthodoxy, but maintained the Constitution as the law of the land. But of the orthodox ministry, Prussia had no denominational organization: there was an address to his newly constituted ministry: "... In both Churches [Catholic and Protestant] all endeavours to make religion a cloak for politics must be strenuously opposed. In the Evangelical Church—we cannot deny it—an orthodoxy has found a footing which is in contradiction with the fundamental idea of its foundation, and has consequently wrecked the Constitution as the law of the land. That orthodoxy has Impeded the work of the Union, has almost wrecked it. Now it is my will that the Union be maintained intact ..." Until 1866, however, little was done to carry out William's programme; it was impossible and unavoidable to dismiss all the clerical office-bearers and professors appointed for their opinions during the last fifteen years. The religious interest of von Muehler, von der Goltz, van Augsta, a highly educated woman devoted to orthodoxy, who suggested candidates for higher positions and insisted on their appointment (Hase, Neue Kircheng., 305). By her stood Hengstenberg and Hofmann, a fanatical Swabian. Together they worked for the preservation of the old regime. The Liberal party at this time was divided; some were content with the existing power in the Protestantverein (Protestant Union), founded in 1863 at Frankfurt-on-the-Main with the object of defeating both Protestant and Catholic orthodoxy.

It spread at first but slowly, as it found little support among the still faithful masses and met with open hostility among the ruling classes. In 1906 it numbered 27,900 members.

After the war with Austria (1866) the acquisition of new territories laid upon William I the task of again regulating the religious situation of his kingdom. The Hengstenberg party proposed a measure which would have dealt the death-blow to the Union, viz. to divide the Supreme Church Council into three senates: a Lutheran, a Reformed, and a United, each with circular territorial jurisdiction. But the religious interests of power in the Protestantverein (Protestant Union), founded in 1864 at Frankfurt-on-the-Main with the object of defeating both Protestant and Catholic orthodoxy. It spread at first but slowly, as it found little support among the still faithful masses and met with open hostility among the ruling classes. In 1906 it numbered 27,900 members.

From the various statements contained in the New Testament, we may gather with some probability that evangelists were travelling missionaries, each namely solemnly set apart, as seems to have been the case with Sts. Paul and Barnabas (Acts, xiii, 1-3), to go about and preach the Gospel, yet sometimes with a settled place of abode, as Philip at Caesarea, and Timothy at Ephesus. They were endowed with a special charisma to preach to those unacquainted with the Christian Faith. They were for the most part the only systematic work of the pastors and teachers. But their office, as such, seems to have extended no further; so, for instance, we understand from Acts, vii, 4 sqq., that Philip, who preached successfully in Samaria and baptized many, was not qualified to impart the Holy Ghost to the converts (verse 14). Accordingly, St. Paul, in his list of the gifts bestowed by Christ for the edification of the Church, Eph., iv, 11 (in I Cor., xii, 28, they are omitted), mentions the evangelists in the third place, only after the Apostles and the Prophets. In the writings of the Apostolic Fathers, no reference is made to evangelists; travelling missionaries are sometimes called "apostles"; sometimes also, as in the Didache, they are styled "teachers"; evangelists were travelling missionaries, or, rather, evangelists, perhaps sporadically still used for some time in its old sense (Euseb., Hist. Eccl., V, x), received, in most parts of the Church, another meaning. Applied occasionally to the reader in the Liturgy (Apost. Const., III), even to the deacon (Lit. of St. John Chrysost., P. G., LXIII, 910), it gradually confined to the writers of the Four Gospels (Euseb., Hist. Eccl., III, 2, V, 22, etc.). It is exclusively in this sense that common modern parlance employs it.

As early as the second century, Christian writers sought in Ezechiel's vision (i, 6 sqq.) and in Apoc. (iv, 6-10) symbolic representations of the Four Evangelists. The system, which finally prevailed in the Latin Church, consisted in symbolizing St. Matthew by a man, St. Mark by a lion, St. Luke by an ox, and St. John by an eagle (see SYMBOLISM). It is fully explained by St. Jerome (In Ezechiel, i, 7), and had been adopted by St. Ambrose (Expos. Ev. S. Luc., Proem.), St. Gregory the Great (In Ezechiel, Hom., i, iv, 1), and others. St. Ireneus, on the one hand, and Augustine, followed by the Venerable Bede, on the other, had devised different combinations. Christian artists followed in the footsteps of the ecclesiastical writers, with different manners, of the four traditional figures to represent the Evangelists. Among the most remarkable works of this description it will suffice here to mention only the old mosaics of the churches of S. Pudentiana, S. Sabina, S. Maria Maggiore, and S. Paolo fuori le Mura, at Rome.

Evaristus, Saint, Pope, date of birth unknown; d. about 107. In the Liberian Catalogue his name is given as Aristus. In papal catalogues of the second century used by Irenaeus and Hippolytus, he appears as the fourth successor of St. Peter, immediately after St. Clement. The same lists allow him eight years of reign, covering the end of the first and the beginning of the second century (from about 95 to about 106 or 107). The earliest historical sources offer no authentic data about him. In his "Ecclesiastical History" Eusebius says merely that he succeeded Clement in the episcopate of the Roman Church, which fact was already known from St. Irenaeus. This order of succession is undoubtedly correct. The "Liber Pontificalis" says that Evaristus came of a Hellenic family, and was the son of a Bethlehem Jew. It also attributes to him the allotment of the district of Jerusalem and the division of the city into seven deaconries or deaconesses; in this statement, however, the "Liber Pontificalis" arbitrarily refers to the time of Evaristus a later institution of the Roman Church. More trustworthy is the assertion of the "Liber Pontificalis" that he was laid to rest in Vatican, near the tomb of St. Peter. For Evaristus, though traditional, is not historically proved to have occurred 26 Oct. The two decretales ascribed to him by Pseudo-Isidore are forged.

Eve (Heb. ידה, ha'awah).—The name of the first woman, the wife of Adam, the mother of Cain, Abel, and Seth. The name occurs only five times in the Bible. In Gen., iii, 20, it is connected etymologically with the verb יד, "to live"; "And Adam called his wife's name Eve; because she was the mother of all the living". The Septuagint rendering in this passage is ζωή (=life, or life-giver), which is a translation; in two other passages (Gen., iv, 1 and 25) the name is transliterated Ewē. The Biblical data concerning Eve are confined almost exclusively to the second, third, and fourth chapters of Genesis (see ADAM).

The first account of the creation (Gen. i, "P") sets forth the creation of mankind in general, and states simply that they were created male and female. The second narrative (Gen., ii, "J") is more explicit and detailed. God is represented as forming an individual man from the slime of the earth, and breathing into his nostrils the breath of life. In like manner the creation of the first woman and her relation to man is described with picturesque and significant imagery. In this account, in which the plants and animals appear on the scene only after the creation of man, the loneliness of the latter (Gen., ii, 18), and his failure to find a suitable companion among the animals (Gen., ii, 20), are set forth as the reason why God determines to create for man a companion like unto himself. He creates a deep sleep to fall upon man, and one of his ribs, forms it into a woman, who, when she is brought to him, is recognized at once as bone of bone and flesh of his flesh. A discussion of the arguments in favor of the historical, or the more or less allegorical character of this narrative would be beyond the scope of the present notice. Sufficient it to say that the Biblical account has always been looked upon by pious commentators as embodying, besides the fact of man's origin, a deep, practical and many-sided significance, bearing on the mutual relationship established between the sexes by the Creator.

Thus, the primitive institution of monogamy is implied in the fact that one woman is created for one man. Eve, as well as Adam, is made the object of a special creative act, and its analogical character expresses her natural equality with him, while on the other hand her being taken from his side implies not only her secondary rôle in the conjugal state (I Cor., xi, 9), but also emphasizes the intimate union between husband and wife, and the dependence of the latter on the former.

"Wherefore a man shall leave father and mother, and shall cleave to his wife: and they shall be two in one flesh." The innocence of the newly created couple is clearly indicated in the following verse, but the narrator immediately proceeds to relate how they soon acquired, through actual transgression, the knowledge of good and evil, and with it the sense of shame which had been previously unknown to them. In the story of the Fall, the original cause of evil is the serpent,
which in later Jewish tradition is identified with Satan (Wislom, ii, 24). He tempts Eve presumably as the weaker of the two, and she in turn tempts Adam, who yields to her seduction. Immediately their eyes are opened, but in an unexpected manner. Shame and remorse take possession of them, and they seek to hide from the face of the Lord.

For her share in the transgression, Eve (and woman-kind after her) is sentenced to a life of sorrow and travail, and to be under the power of her husband. Doubtless this last did not imply that the woman's essential condition of equality with man was altered, but the sentence expresses what, in the nature of things, was bound to follow. She was to be the servant of man and of sin and its consequences. The natural dependence and subjection of the weaker party was destined inevitably to become something little short of slavery. But if woman was the occasion of man's transgression and fall, it was also decreed in the Divine counsels, that she was to be instrumental in the scheme of restoration which God already promises while in the act of pronouncing sentence upon the serpent. The woman has suffered defeat, and infinitely painful are its consequences, but henceforth there will be enmity between her and the serpent, between his seed and her seed, until through the latter in the person of the future Redeemer, who will crush the serpent's head, she will again be victorious.

Different histories of Eve the Bible gives little information. In Gen., iv, 1, we read that she bore a son whom she named Cain, because she got him (ואל - to acquire, possess) through God—this at least is the most plausible interpretation of this obscure passage. Later she gave birth to Abel, and the narrative does not record the birth of another child until after the slaying of Abel by his elder brother, when she bears a son and calls his name Seth; saying, God has appointed another seed for me in place of Abel whom Cain slew'. Of daughters no specific mention is made in this account, but in Gen., viii, 4 ("P") we find the general statement that "the days of Adam, after he begot Seth, were eight hundred years: and he begot sons and daughters."

Eve is mentioned in the Book of Tobias (viii, 5; Sat., viii, 6) where it is simply affirmed that she was given to Adam for a helper: in II Cor., xv, 3, where reference is made to her seduction by the serpent, and in I Tim., ii, 13, where the Apostle enjoins submission and silence upon women, arguing that "Adam was first formed; then Eve. And Adam was not seduced, but the woman being seduced, was in the transgression."

As in the case of the other Old Testament personages, many rabbinical legends have been connected with the name of Eve. They may be found in the "Jewish Encyclopedia", s. v. (see also Adam), and in Vigouroux, "Dict. de la bible", i, art. "Adam". They are, for the most part, puerile and fantastic, and devoid of historical value, unless in so far as they serve to illustrate the mentality of the later Jewish writers, and the unreliability of the so-called traditions derived from such sources, though they are sometimes appealed to in critical discussions.

JAMES F. DRISCOLL.

Eve of a Feast (or Vigil; Lat. Vigilia, Gr. παραπάσχειν).—In the first ages, during the night before every feast, a vigil was kept. In the evening the faithful assem- bled in the place or church where the feast was to be celebrated and prepared themselves by prayers, read- ings from Holy Writ (now the Offices of Vespers and Matins), and sometimes also by hearing a sermon. On such occasions, as on fast days in general, Mass also was celebrated in the evening, before the Vespers of the following day. Towards morning the people dispersed to the streets and houses near the church, to wait for the solemn services of the forenoon. This vigil was a regular institution of Christian life and was defended and highly recommended by St. Augustine and St. Jerome (see Plessner, "Aelteste Geschichte des Breviergebetes", pp. 223 sq.). The morning intermission gave rise to grave abuses; the people caroused and danced in the streets and halls around the church (Durandus, "Rat. Div. off.", VI, 7). St. Jeromes speaks of these improprieties (Epist. ad Ruparium).

As the feasts multiplied, the number of vigils was greatly reduced by the laws of Innocent III, which fixed the number of vigils only by abolishing the vigils. And where they could not be abrogated at once and entirely they were to begin in the afternoon. A synod held at Rouen in 1231 prohibited all vigils except those before the patronal feast of a church (Hefele, "Conciliengeschichte", v, 1007).

In place of nocturnal observances, the bishops introduced for the laity a fast on the day before the feast, which fast was called the "Vigilia praeprofessionis". Honorius of Auxerre, in 1152 (Gemma Animae, III, 6), and others explain in this way the origin of this fast. It existed, however, long before the abolition of the nocturnal meetings. The fast on Christmas Eve is mentioned by Theophilus of Alexandria (d. 412), that before the Epiphany by St. John Chrysostom (c. 409). The liturgy of the Synod of Lateran (1139) and that of the Synod of Erfurt (1182) connect the fast with every vigil. The very fact that the people were not permitted to eat or drink before the services of the vigil (Vespers and Matins) were ended, after midnight, explains the exceptional nature of these vigils. The Abbot of Erfurt (1182) calls the vigils "Our Lady's Vigil or Holy Saturday vigil", and of the latter it is especially noted that the celebration of the Vigil during the liturgy of Holy Saturday (vigil of Easter) shows, in all its parts, that originally it was not kept on the morn- ing of Saturday, but during Easter Night. The day before the fast was henceforth called vigil. A similar celebration before the high feasts exists also in the Orthodox (Greek) Church, and is called παραπάσχειν or ἑορτασμός. In the Occident only the older feasts have the vigil. Even these the fast has disappeared since the thirteenth century (Corpus Christi, the Sacred Heart) have no vigils, except the Immaculate Conception, which Pope Leo XIII (30 Nov., 1870) singled out for this distinction. The number of vigils in the Roman Calendar besides Holy Saturday is seventeen, viz., the eves of Christmas, the Epiphany, the Ascen- sion, the Pentecost, the Ember Days, the memorial of the Assumption, the eight feasts of the Apostles, St. John the Baptist, St. Laurence, and All Saints. Some dioceses and religious orders have particular vigils, e.g. the Servites, on the Saturday next before the feast of the Seven Dolours of Our Lady; the Carmelites, on the eve of the feast of Mount Carmel. In the United States only four of these vigils are fast days: the vigils of Christmas, Pentecost, the Assumption, and the Vigil of All Saints. The vigils of Christmas, the Epiphany, and Pentecost are called vigilæ majori; they have a proper Office (semi-double), and the vigil of Christmas, from Lauds on, is kept as a double feast. The rest are vigilæ minores, or communes, and have the ferial Office. On the occasion of the reform of the Breviary, in 1568, a solemnity on the Gospel of the vigil was added, an innovation not accepted by the Cistercians. If a vigil falls on a Sunday, according to the present rubrics, it is kept on the preceding Saturday; during the Middle
Ages in many churches it was joined to the Sunday Office. If it occurs on a double or a semi-double feast, it is limited to a commemoration in the Lauds and Mass (a feast of the first class excludes this commemoration), the ninth lesson in the Breviary, and the Last Gospel in Mass. If it occurs on a day within an ordinary octave, the Mass is said of the vigil, the Office of the octave; if it occurs on a feria major, the vigil is omitted in the Breviary and commemorated only in the Mass, if the feria has a proper mass; if not (e.g. in Advent), the mass is said of the vigil, the feria is commemorated. In the Ambrosian Liturgy of Milan only the vigils of Christmas and Pentecost are kept, at least by a special Mass; the other vigils exist only in the Calendar, but are not kept in the liturgy. In the Mozarabic Rite only Christmas has a vigil; three days before Epiphany and four days before Pentecost a fast is observed; the other vigils are unknown.

**Evesham Abbey in 1530** (Reconstruction)

Evesham Abbey, founded by St. Egwin, third Bishop of Worcester, about 701, in Worcestershire, England, and dedicated to the Blessed Virgin. The founder’s charter of endowment, dated 714, records that a herdsman of the bishop, named Eoves, was one day favoured with a vision of Our Lady. St. Egwin, being informed, visited the spot and there the Mother of God appeared to him also, commanding him to erect in it place a monastery in her honour for Benedictine monks. The bishop at once set about the task, being liberally assisted in the work by Ethelred and Kenred, successive kings of Mercia, and others. The derivation of the name Evesham is accounted for by the above legend. It is stated, though contemporary charters make the fact doubtful, that St. Egwin resigned his see in order to become first abbot of the new foundation, which he ruled until his death in 717. He was buried in the abbey church and his shrine, beautified by subsequent abbots, became in after years one of the richest and most popular in the West of England, and many miracles are recorded as having taken place there. In 914, after the havoc wrought by the Danes, the few remaining monks who had survived were ejected and secular canons installed in their place. Their possession of the abbey, however, did not last long, for in 960 St. Dunstan and St. Ethelwold, then engaged upon their great reform of the English monasteries, restored the Benedictines to their own. A second expulsion occurred in 977 and it was not until 1014 that the monks effected their final return. With the Norman conquest, and the consolidation of the kingdom of England, Evesham grew and prospered, and enjoying royal favour became one of the most important abbeys of Black Monks in the country, so much so, indeed, that the jealousy of the bishops of Worcester was aroused.

As in the case of many other monasteries they claimed rights of visitation and diocesan authority over the monks. The dispute continued for a long time, but eventually the exemption from episcopal jurisdiction, originally obtained by St. Egwin, was confirmed by Rome in 1206. In this as in other matters, the internal history of the abbey, as recorded in the “Evesham Chronicle”, differs only in detail from that of any other great Benedictine house of the same period. A succession of worthy abbots, seldom broken, guided its fortunes wisely and vigorously through the eight centuries of its existence. The use of abbatial pontificia was obtained in 1160 by Abbot Adam from the reigning pope. At the height of its prosperity the abbey was one of the largest and most stately in England. It had two dependent “cells”—Penwortham, in Lancashire, and Alcester, in Warwickshire—besides another in Denmark; the abbots were also the patrons of seventeen neighbouring parishes; they had a seat in the House of Lords; and they exercised civil jurisdiction within the bounds of the monastic territory. The great abbey church, which, besides the magnificent shrine of St. Egwin, contained fifteen altars, was commenced in the eleventh century by Abbot Egbert, and gradually completed by several subsequent abbots. It was cruciform, with a central tower, and was nearly 300 feet in length. The previous campnilile having fallen, after being struck by lightning, a magnificent bell tower, still standing, was built by Abbot Clement Liefield about 1533.

Within the abbey precincts and under the very shadow of its minster, were two parish churches, erected by the monks for the use of the people of the town which had grown up around its walls. That of St. Lawrence dates from the thirteenth century and that of All Saints is of a century later. The last of the great abbots of Evesham, Clement Liefield, who reigned from 1514 to 1539, added chantries to both of these churches. Unwilling to yield to the rapacity of Henry VIII, when the suppression of the monasteries was threatening, he resigned his abbacy. It is said, at Cromwell’s suggestion. His unworthy successor was Philip Hawford, who surrendered the abbey into the king’s hands in the same year, 1539. For this service he was rewarded with a pension of £240, and afterwards became first Protestant Dean of Worcester, in which cathedral his tomb may still be seen. The revenues of the abbey at this time, its suppression are given by Dugdale as £1183. The demolition of the buildings commenced almost immediately, and the ruins became, as in the case of so many others, a stone quarry for the neighbourhood. Besides the two parish churches and the bell tower, only a gateway, a cloister arch, the almory, and a few other isolated fragments remain intact to show what man-
ner of building the once glorious abbey of Evesham was.

tiae de Evesham in Rolls Series, MACRAT ed. (London, 1863); THEODOR, History and Antiquities of Evesham (Evesham, 1794).

G. CYPRIAN ALSTON.

Evil, in a large sense, may be described as the sum of the opposition, which experience shows to exist in the universe, to the desires and needs of individuals; whereas human evil is but a modification of this evil suffering in which life abounds. Thus evil, from the point of view of human welfare, is what ought not to exist. Nevertheless, there is no department of human life in which its presence is not felt; and the discrepancy between what is and what ought to be has always called for explanation in the account which mankind has sought to give of itself and its surrounding. For this purpose it is necessary (1) to define the precise nature of the principle that imparts the character of evil to so great a variety of circumstances, and (2) to ascertain, as far as may be possible, the source from which it arises.

With regard to the nature of evil, it should be observed that evil is of three kinds—physical, moral, and mental. Physical evil is injury or destruction of the body, or harm to man, whether by bodily injury, by thwarting his natural desires, or by preventing the full development of his powers, either in the order of nature directly, or through the various social conditions under which mankind naturally exists. Physical evils directly due to nature are sickness, accident, death, etc. Poverty, oppression, and some forms of disease are likewise examples of this kind. Mental evil arises from mental suffering, such as anxiety, disappointment, and remorse, and the limitation of intelligence which prevents human beings from attaining to the full comprehension of their environment, are congenital forms of evil which vary in character and degree according to natural dispositions and social circumstances.

By moral evil are understood the deviation of human volition from the prescriptions of the moral order and the action which results from that deviation. Such action, when it proceeds solely from ignorance, is not to be classed as moral evil, which is properly restricted to the motions of the will towards ends of which the conscience disapproves. The extent of moral evil is limited to the individual, the sphere of the natural order, but includes also the sphere of religion, by which man's welfare is affected in the supernatural order, and the precepts of which, as depending ultimately upon the will of God, are of the strictest possible obligation (see Sin). The obligation to moral action in the natural order is, moreover, generally believed to depend on the motives supplied by religion; and it is at least doubtful whether it is possible for moral obligation to exist at all apart from a supernatural sanction.

Metaphysical evil is the limitation by one another of the various component parts of the natural world. Through this mutual limitation natural objects are for the most part prevented from attaining to their full or ideal perfection, whether by the constant pressure of physical conditions, or by sudden catastrophes. Thus, animal and vegetable organisms are variously influenced by climate and other natural causes; predatory animals depend for their existence on the destruction of life; nature is subject to storms and convulsions, and its order depends on a system of perpetual decay and renewal due to the interaction of its constituent parts. It is evident that metaphysical evil does not, like the other two kinds, necessarily connote suffering. If animal suffering is excluded, no pain of any kind is caused by the inevitable limitations of nature; and they can only be called evil by analogy, and in a sense quite different from that in which the term is applied to human experience. Clarke, moreover, has aptly remarked (Correspondence with Leibnitz, letter ii) that the apparent disorder of nature is really in accordance with a perfect scheme, and precisely fulfils the intention of the Creator; it may therefore be counted as a relative perfection rather than an imperfection. It is, in fact, only by a transference to irrational objects of the subjective ideals and aspirations of human intelligence, that the 'evil of nature' can be called evil in any way to man. Whether this imperfection exists in degree of pain in the lower animals is very obscure, and in the necessary absence of data it is difficult to say whether it should rightly be classed with the merely formal evil which belongs to inanimate objects, or with the suffering of human beings. The latter view was generally held in ancient times, and may perhaps be referred to the anthropomorphic tendency of primitive minds which appears in the doctrine of metempsychosis. Thus it has often been supposed that animal suffering, together with many of the imperfections of inanimate nature, was due to the fall of man, with whose welfare, as the chief part of creation, were bound up the fortunes of the rest (see Theophr. Anti
dech., Ad Autolyc., II; cf. Gen. iii, and I Cor. ix). The opposite view, that suffering among men and in nature is the result of human imperfection (see I, 2). Descartes supposed that animals were merely machines, without sensation or consciousness; he was closely followed by Malebranche and Cartesians generally. Leibnitz grants sensation to animals, but considers that mere sense-perception, unaccompanied by reflexion, cannot cause either pain or pleasure; in any case he holds the pain and pleasure of animals to be incomparably in degree to those resulting from reflex action in man (see also Maher, Psychology, Supp. 1. A., Lon
don, 1903).

It is evident again that all evil is essentially nega
tive and not positive; i.e. it consists not in the acquisi
tion of anything, but in the loss or deprivation of something necessary for perfection. One of which the test or criterion of physical evil, has indeed a posi
tive, though purely subjective existence as a sensation or emotion; but its evil quality lies in its disturbing effect on the sufferer. In like manner, the perverse action of the will, upon which moral evil depends, is more than a mere negation of right action, implying as it does the positive choice of an evil act. It is here that the evil of nature, it may be said, lies, in its rejection of what right reason requires. Thus Origen (In Joh., ii, 7) defines evil as στραγγισμός; the Pseudo-Dionysius (De Div. Nom. iv) as the non-existent; Maimonides (Dux perplex. iii, 10) as "privatio boni alieni"; Albertus Magnus (adopting St. Augustine's phrase) attributes evil to "alius causae diemtem" (Summa Theol., I, xi, 4); Schopenhauer, who held pain to be the "natural and normal condition of life (pleasure being its partial and temporary absence), nevertheless made it depend upon the failure of human desire to obtain fulfilment — "the wish is in itself pain". Thus it will be seen that evil is not a real entity; it is relative. What is evil in some relations may be good in others; and it is highly probable that what is evil in one existence (which is exclu
sively evil in all relations. Hence it has been thought that evil cannot truly be said to exist at all, and is really nothing but a "lesser good." But this opinion seems to leave out of account the reality of human experience. Though the same cause may give pain to one, and pleasure to another, pain and pleasure, as sensations or ideas, cannot but be mutually exclusive. No one, however, has attempted to deny this very obvious fact; and the opinion in question may perhaps be understood as merely a paradoxical way of stating the relativity of evil.
There is practically a general agreement of authorities as to the nature of evil, some allowance being made for varying modes of expression depending on a corresponding variety of philosophical presuppositions. But on the question of the origin of evil there has been, and is, a considerable diversity of opinion. The problem is strictly a metaphysical one; i.e., it cannot be solved by a mere experimental analysis of the actual conditions from which evil results. The question, which Schopenhauer has called "the punc-

"There is a general agreement of authorities as to the nature of evil, some allowance being made for varying modes of expression depending on a corresponding variety of philosophical presuppositions. But on the question of the origin of evil there has been, and is, a considerable diversity of opinion. The problem is strictly a metaphysical one; i.e., it cannot be solved by a mere experimental analysis of the actual conditions from which evil results. The question, which Schopenhauer has called "the punctum pruriens" of metaphysics", is concerned not so much with the various detailed manifestations of evil in nature, as with the hidden and underlying cause which has made these manifestations possible or necessary. The question of evil, or the necessity of evil, is so obscure must be attended with great difficulty, and, that the conclusions reached must, for the most part, be of a provisional and tentative character. No system of philosophy has ever succeeded in escaping from the obscurity in which the subject is involved; but it is not too much to say that the Christian solution offers, on the whole, fewer difficulties, and approaches nearer to a general satisfaction than any other. The question may be stated thus: Admitting that evil consists in a certain relation of man to his environment, or that it arises in the relation of the component parts of the totality of existence to one another, how comes it that though all are alike the results of a universal cosmic process, this universal agency is perpetually at war with itself, and contradicts the very intentions and solutions of its own efforts in the mutual hostility of its progeny? Further, admitting that metaphysical evil in itself must be merely nature's method, involving nothing more than a continual redistribution of the material elements of the universe, human suffering and wrong-doing still stand out as essentially opposed to the general scheme, as an alien and unnatural phenomenon, and seem never to be reconciled in thought with any conception of unity or harmony in nature. To what, then, is the evil of human life, physical and moral, to be attributed as its cause? But when the universe is considered as the work of an all-benevolent and all-powerful Creator, a fresh element is added to the problem. If God is all-benevolent, why did He cause or permit evil? Is it not necessary or unavoidable, and therefore to be regarded as a necessary evil? On the other hand, if He is under any such necessity, He cannot be all-powerful. Again, if God is absolutely good, and also omnipotent, how can He permit the existence of moral evil? We have to enquire, that is to say, how evil has come to exist, and what is its special relation to the Creator of the universe. The problem has been attempted by three different methods.

I. It has been contended that existence is fundamentally evil; that evil is the active principle of the universe, and good no more than an illusion, the pursuit of which serves to induce the human race to perpetuate its own existence (see Pessimist). This is the view of the Prussian school of philosophy, and regards happiness as unattainable, and holds that there is no way of escaping from misery but by ceasing to exist otherwise than in the impersonal state of Nirvana. The origin of suffering, according to Buddha, is "the thirst for being". This was also, among Greek philosophers, the view of Hegesias the Cyrenean (called *pessimistos*). But the modern "pessimist", who holds evil to be valueless, and pleasure, the only good, to be unattainable. But the Greek temper was naturally inclined to a pessimistic view of nature and life; and while popular mythology embodied the darker aspects of existence in such conceptions as those of Fate, the avenging Furies, and the envy (ἐφθέγμα) of the gods, Greek thinkers, as a rule, held that evil is not universally supreme, but can be avoided or overcome by the wise and virtuous.

Pessimism, as a metaphysical system, is the product of modern times. Its chief representatives are Schopenhauer and von Hartmann, both of whom hold the actual universe to be fundamentally evil, and happiness in it to be impossible. The origin of the phenomenal universe is attributed by Schopenhauer to a transcendent Will, which he identifies with pure being; and by Hartmann to the Unconscious, which includes both the Will and the Idea (Vorstellung) of Schopenhauer. According to both Schopenhauer and Hartmann, suffering has come into existence with self-consciousness, from which it is inseparable.

II. Evil has been attributed to one of two mutually opposed principles, to which respectively the mingled good and evil of the world are due. The relation between the two was first considered by the Greek philosophers from the co-ordination imagined by Zoroastrianism to the more relative independence of the created will as held by Christian theology. Zoroaster attributed good and evil respectively to two mutually hostile principles (βασιλεία, or διανούς) called Ormuzd (Ahura Mazda) and Ahriman (Angra Mainyu). Each was independent of the other; but eventually the good were to be victorious with Ormuzd, and Ahriman and his evil followers were to be expelled from the world. This mythological dualism passed to the sect of the Manichees, whose founder, Manes, added a third, but subordinate principle, emanating from the source of good (and perhaps corresponding, in some degree, to the Mithras of Zoroastrianism), in the "living spirit" by which the world of mingled good and evil was held that matter was essentially evil, and therefore could not be in direct contact with God. He probably derived the notion from the Gnostic sects, which, though they differed on many points from one another, were generally agreed in following the opinions of Philo, and the neoclassicists, who held that the world to have been formed by an emanation, the Demiurge, as a kind of intermediary between God and impure matter. Bardeanes, however, and his followers regarded evil as resulting from the misuse of created free will.

The notion that evil is necessarily inherent in matter, independent of the Divine author of good, and in the practical working of the theosophical systems, to many of the purely rational conceptions of Greek philosophy, and to much that has been advanced on this subject in later times. In the Pythagorean idea of a numerical harmony as the constitutive principle of the world, good is represented by unity and evil by multiplicity (Philoatra, Fragm. 61). The "miraculous" force of number is held to be the essential condition of life, over against the action of the immanent deity. "God is the author of all that is right and good and just; but men have sometimes chosen good and sometimes evil" (Fragm. 61). Empedocles, again, attributed evil to the principle of hate (φόβος), inherent together with its opposite, love (φίλος), in the universe. Plato held God to be the author of the One (Monade), in which the world; its cause was partly the necessary imperfection of material and created existences, and partly the action of the human will (Timaeus, xii.; cf. Phaedo, ix.). With Aristotle, evil is a necessary aspect of the constant changes of matter, and has in itself no real existence (Metaph., ix, 9). The Stoics conceived evil in a way that the active power of the immanent Divine power harmonizes the evil and good in a changing world. Moral evil proceeds from the folly of mankind, not from the Divine will, and is overruled by it to a good end. In the hymn of Cleanthes to Zeus (Stob. Ecl. 1, p. 30) may be perceived an approach to the doctrine of Leibniz, as to the nature of evil and the goodness of the world. "Nothing is done without their in earth or sea or sky; save what evil men commit by their own folly; so thou hast fitted together all evil and good in one, that there might be one
reasonable and everlasting scheme of all things." In the mystical system of Eckhart (d. 1329), evil, sin included, has its place in the evolutionary scheme by which all proceeds from and returns to God, and contributes, both in the moral order and in the physical, to the accomplishment of the Divine purpose. Eckhart's monistic or pantheistic tendencies seem to have obscured for him many of the difficulties of the subject, as declared by those with whom he held in the same tendency. Such tendencies have since been carried to an extreme conclusion.

Christian philosophy has, like the Hebrew, uniformly attributed moral and physical evil to the action of created free will. Man has himself brought about the evil from which he suffers by transgressing the law of God. It is like the case with those by whom evil is created things under the aspect of mutability, and possibility of defect, not as existing per se: and the evils of mankind, mistaking the true conditions of its own well-being, have been the cause of moral and physical evil (Dion. Areop., De Div. Nom., iv, 31; St. Aug., De Civ. Dei, xii). The evil from which man suffers is, however, the condition of good, for the sake of which it was created. "All things were created to bring good out of evil than to suffer no evil to exist" (St. Aug., Enchirid., xxvii). Evil contributes to the perfection of the universe, as shadows to the perfection of a picture, or harmony to that of music (De Civ. Dei, xi). Again, the excellence of God's works in nature is insisted on as evidence of the Divine wisdom. All such tends, says Augustine, to bring evil directly caused.

Greg. Nyss., De opif. hom.) Thus Boethius asks (De Consol. Phil., I, iv) Who can be the author of good, if God is the author of evil? As darkness is nothing but the absence of light, and is not produced by creation, so evil is merely the defect of goodness. (St. Aug., In Gen. ad lit.) St. Basil (Hexam., Hom. ii) points out the eductive purposes served by the evils which have been permitted for the punishment of the wicked and the trial of the good, shows that it has, under this aspect, the nature of good, and is pleasing to God, not because of what it is, but because of where it is; i. e. as the penal and just consequence of sin (De Civ. Dei, xii, xvi, De Vera Relig., xiv). Lactantius uses similar arguments to helped Schol. and taught Gomper, that evil was to be the very perfection of the good, which he puts into the mouth of Epiecurus (De Ira Dei, xiii). St. Anselm (Monologium) connects evil with the partial manifestation of good by creation; its fullness being in God alone.

The features which stand out in the earlier Christian explanation of evil, as compared with non-Christian dualistic theories are thus (1) the definite attribution to God of absolute omnipotence and goodness, notwithstanding His permission of the existence of evil; (2) the assignment of a moral and retributive cause for suffering in the sin of mankind; and (3) the unhesitating assertion of the beneficence of God's purpose in permitting evil, together with the full admission that He could, had He so chosen, have prevented it. The Christian doctrine of evil, which He foreknew and could have prevented is to be reconciled with His goodness, is not fully considered; St. Augustine states the question in forcible terms, but is content by way of answer to follow St. Paul, in his reference to the unsearchableness of the Divine judgments (Contra Juliana, i, 18).

The same general lines have been followed by most of the modern attempts to account in terms of Theism for the existence of evil. Descartes and Malebranche held that the world is the best possible for the purpose for which it was created, i. e. for the manifestation of the attributes of God. If it had been more perfect in detail, it would have been less fitted as a whole for the attainment of this object. The relation of evil to the will of a perfectly benevolent Creator was elaborately treated by Leibniz, in answer to Bayle, who had insisted on the arguments derived from the existence of evil against that of a good and omnipotent God. Leibniz founded his views mainly on those of St. Augustine and St. Thomas, and deduced from them his theory of Optimism (q. v.). According to it, the universe is the best possible; but metaphorical evil, or imperfection, is necessarily involved in its constitution, since it must be finite, and could not have been created without such imperfections. Since the will of God alone. Moral and physical evil are due to the fall of man, but all evil is overruled by God to a good purpose. Moreover, the world with which we are acquainted is only a very small factor in the whole of creation, and it may be supposed that the evil which it contains is necessary for the existence of other regions unknown to us. This last-mentioned position was definitely held by Bayle, who perceived that the notion of evil, as a necessary condition of a finite and imperfect world; and it must be admitted that the theory is open to grave objections. On the one hand, it is scarcely consistent with belief in the Divine omnipotence; and on the other, it fails to account for the permission (or indirect authorship) of evil by a good God, to which Bayle had specially taken exception. We cannot know that this world is the best possible; and if it were, why, since it must include so much that is evil, should a perfectly good God have created it? It may be urged, moreover, that there can be no degree of finite goodness which is not susceptible of increase by omnipotence, without ceasing to fall short of infinite perfection.

This has been more or less closely followed by many who have since treated the subject from the Christian point of view. These have, for the most part, emphasized the evidence in creation of the wisdom and goodness of its Author, after the manner of the Book of Job, and have been content to leave undiscovered the reason for the creation, by Him, of a universe in which evil is unavoidable. Such was the view of Kierkegaard, of Edersheim (q. v.), of Edward Coke, who insisted strongly on the doctrine of the best possible world; of Cudworth, who held that evil, though in separable from the nature of imperfect beings, is largely a matter of men's own fancy and opinions, rather than of the reality of things, and therefore not to be made the ground of accusation against Divine Providence. Derham (Physico-Theology, London, 1712) took occasion from an examination into the evidence of creation to commend an attitude of humility and trust towards the Creator of "this elegant, this well-contrived, well-formed world, in which we find everything necessary for the sustentation, use and pleasure both of man and every other creature here below; as well as some whips, some rods, to scourge us for our sins." Priestley held a doctrine of absolute Determinism, and consequently attributed evil solely to the Divine will; which, however, he justified by the good ends which evil is providentially made to subserv (Doctrine of Philosophical Necessity, Birmingham, 1782). Clarke, again, called special attention to the evidence of method and design, which bear witness to the goodness of God; but, in the midst of apparent moral and physical evil, he adhered closely following Malebranche, pointed out that the question of the possibility of a better world than this has really no meaning; any world created by God must be the best possible in relation to its special purpose, apart from which neither goodness nor badness can be predicated of it. Maniam also supposed evil to be inseparable from the finite, but that it tended to disappear as the finite approached its final union with the infinite.

III. The third way of conceiving the place of evil in the general scheme of existence is that of those systems of Monism, by which evil is viewed as merely a mode in which certain aspects or moments of the development of nature are apprehended by human consciousness. In this view there is no distinctive principle to
which evil can be assigned, and its origin is one with that of nature as a whole. These systems reject the specific idea of creation; and the idea of God is either rigorously excluded, or identified with an impersonal principle, immanent in the universe, or conceived as a mere abstraction from the methods of nature; which, whether viewed from the standpoint of Materialism or from that of Idealism, is the one ultimate reality. The problem of the origin of evil is thus merged in that of the origin of being. Moral evil, in particular, arises from error, and is to be gradually eliminated, or at least minimized, by improved knowledge. With the doctrine of Materialism, this, on the whole, were the doctrines of the Ionic Hylozoists, whose fundamental notion was the essential unity of matter and life; and on the other hand, also, that of the Eleatics, who found the origin of all things in abstract being. The Atomists, Leucippus and Democritus, held what may be called a doctrine of materialistic Monism. This doctrine, however, found its first complete expression in the philosophy of Epicurus, which explicitly rejected the notion of any external influence upon nature, whether of "fate", or of Divine power. According to the Epicurean Lucretius (De Rerum Natura, II, line 180) the existence of evil was fatal to the supposition of the creation of the world by God.

Nequaquam nobis divinissim esse creatum. Naturam mundi, que tanta est praddita culpa. Giordano Bruno made God the immanent cause of all things, acting by an internal necessity, and producing the relations considered evil by mankind. Hobbes regarded God as merely a corporeal first cause; and applying his theory of evil government to the universe, defended the existence of evil by simple assertion of the absolute power to which it is due—a theory which is little else than a statement of materialistic Determinism in terms of social relations. Spinoza united matter and spirit in the notion of a single substance, to which he attributed both thought and extension; error and imperfection were the necessary consequence of the order of the universe. The Hegelian Monism, which reproduces many of the ideas of Eckhart, and is adopted in its main features by many different systems of recent origin, gives to evil a place in the unfolding of the idea, in which both the origin and the inner reality of the universe are to be found. Evil is the temporary discord between what is and what ought to be. Huxley was content to believe that the ultimate imperfection and ultimate evil are to be found and may be unknowable. Evil is to be known and combated in the concrete and in detail; but the Agnosticism professed, and named, by Huxley refuses to entertain any question as to transcendental causes, and confines itself to experimental facts. Haeckel advances a dogmatic materialism, in which substance (i.e. matter and force) appears as the eternal and infinite basis of all things. Professor Metchnikoff, on similar principles, places the cause of evil in the "disharmonies" which prevail in nature, and which he thinks may perhaps be ultimately removed, for the human race at least, together with the pessimistic temper arising from them, by the progress of science. Bourdeau has asserted in express terms the futility of seeking an explanaion of the whole universe in supernatural or immanent origin for evil, and the necessity of confining the view to natural, accessible, and determinable causes (Revue Philosophique, i, 1900).

The recently constructed system, or method, called Pragmatism, has this much in common with Pessimism, that it regards evil as an actually unavoidable part of that human experience which is in point of fact the only existing reality, in which we live and move and have our being; and what we make it; evil tends to diminish with the growth of experience, and may finally vanish; though, on the other hand, there may always remain an irreducible minimum of evil. The origin of evil is, like the origin of all things, inexplicable; it cannot be fitted into any theory of the design of the universe, simply because no such theory is possible. "We cannot by any possibility comprehend the character of a cosmic mind whose purposes are fully revealed by the simultaneous mixture of goods and evils that we find in this actual world's particulars—the mere word design, by itself, has no consequences and explains nothing." (James, Pragmatism, London, 1907. Cf. Schiller, Humanism, London, 1907.) Nietzsche holds evil to be purely relative, and in its moral aspect at least, a transitory and non-functional evil. In the pantheistic religion of the Dionysian, in its present state, is "the animal not yet properly adapted to his environment". In this mode of thought the individual necessarily counts for comparatively little, as being merely a transient manifestation of the cosmic force; and the social aspects of humanity are those under which its pains and shortcomings are mostly considered, with a view to their amelioration. Hence, the various forms of Socialism; the idea conceived by Nietzsche of a totally new, though as yet undefined, form of social morality, and of the constitution and mutual relations of classes; and the so-called ethical and scientific religions inculcating morality as tending to the general good. The first example of such religions was that of Auguste Comte, who upon the materialistic view of the universe found the "humanity of humanity", and professed to substitute an enthusiasm for humanity as the motive of right action, for the motives of supernatural religion.

In the light of Catholic doctrine, any theory that may be held concerning evil must include certain points bearing on the question that have been authoritatively defined. These points are (1) the omnipotence, omniscience, and absolute goodness of the Creator; (2) the freedom of the will; and (3) that suffering is the penal consequence of wilful disobedience to the law of God. A complete account may be gathered from the teaching of St. Thomas Aquinas, by whom the principles of St. Augustine are systematized, and to some extent supplemented. Evil, according to St. Thomas, is a result of the absence of some good which belongs properly to the nature of the creature.

Thus the various forms of Socialism; the idea conceived by Nietzsche of a totally new, though as yet undefined, form of social morality, and of the constitution and mutual relations of classes; and the so-called ethical and scientific religions inculcating morality as tending to the general good. The first example of such religions was that of Auguste Comte, who upon the materialistic view of the universe found the "humanity of humanity", and professed to substitute an enthusiasm for humanity as the motive of right action, for the motives of supernatural religion.

In the light of Catholic doctrine, any theory that may be held concerning evil must include certain points bearing on the question that have been authoritatively defined. These points are (1) the omnipotence, omniscience, and absolute goodness of the Creator; (2) the freedom of the will; and (3) that suffering is the penal consequence of wilful disobedience to the law of God. A complete account may be gathered from the teaching of St. Thomas Aquinas, by whom the principles of St. Augustine are systematized, and to some extent supplemented. Evil, according to St. Thomas, is a result of the absence of some good which belongs properly to the nature of the creature.

Evil is threefold, viz., malum nature (metaphysical evil), culpa (moral) and pernec (physical, the retributive consequence of malum culpa) (I, Q. lxxviii, a. 5, 6; Q. lxxix, a. 9; De Malo, 1, 4). Its existence subserves the perfection of the whole; the universe would be less perfect if it contained no evil. Thus fire could not exist without the corruption of what it consumes; the lion must slay the ass in order to live; and if there were no wrongdoing, there would be no sphere for patience and justice (I, Q. lxxviii, a. 2). God is said (as in Is., xlvi) to be the author of evil in the sense that the corruption of material objects in nature is ordained by Him, as a means for carrying out the design of the universe; and on the other hand, the evil which exists as the consequence of the breach of Divine laws is in the same sense due to Divine appointment; the universe would be less perfect if its laws could be broken with impunity. Thus evil, in one aspect, i.e. as counter-balancing the degradation of sin, has the na-
ture of good (II, Q. ii, a. 19). But the evil of sin (culpa), though permitted by God, is in no sense due to Him (I, Q. xlix, a. 2); its cause is the abuse of free will by angels and men (II-II, Q. xiii, a. 6; II-II, Q. x, a. 2; I-II, Q. ix, a. 3). It should be observed that the universal perfection to which evil in some form is necessary, is the perfection of this universe, not of any universe: metaphysical evil, that is to say, and indirectly, moral evil as well, is included in the design of the universe which is partially known to us; but we cannot say without denying the Divine omnipotence, that another equally perfect universe could not be created in which evil would have no place.

It is not impossible to conjecture what are now generally considered to be the two main difficulties of the subject, viz., the Divine permission of foreseen moral evil, and the question finally arising thereupon, why God chose to create anything at all. First, it is asked why God, foreseeing that His creatures would use the gift of free will for their own injury, did not either abstain from creating them, or safeguard their free will from misuse, or else deny them the gift altogether? St. Thomas replies (C. G., II, xxviii) that God cannot change His mind, since the Divine will is free from the defect of weakness or mutability. Such mutability would, it should be remarked, be a defect in the Divine nature (and therefore impossible), because if God’s purpose were made different, He would no longer be the same God. God would thereby sacrifice His own freedom, and would submit Himself to His creatures, thus abdicating His own sovereignty—a thing which, of course, utterly inconceivable. Secondly, to the question why God should have chosen to create, when creation was in no way needful for His own perfection, St. Thomas answers that God acts in order to manifest His own goodness, power, and wisdom, and is pleased with that reflection or similitude of Himself in which the goodness of creation consists. God’s pleasure is the one supremely perfect motive for action, alike in God Himself and in His creatures; not because of any need, or inherent necessity in the Divine nature (C. G., I, xvi; II, xxi), but because God is the source of reality and object of all existence. (I, Q. lxv, a. 2; cf. Prov., 26, and Cone. Vat., can. i, v; Const. Dogm., 1) This is accordingly the reason for the existence of the universe, and even for the suffering which moral evil has introduced into it. God has not made the world primarily for man’s good, but for His own pleasure; good for man lies in the fact that it has provided a place for His own freedom, and evil in departing from it (C. G., III, xviii, cxiv). It may further be understood from St. Thomas, that in the diversity of metaphysical evil, in which the perfection of the universe as a whole is embodied, God may see a certain similitude of His own threefold unity (cf. I, Q. xii); and again, that by permitting moral evil to exist, He has provided a means for the manifestation of one aspect of His essential justice (cf. I, Q. lxv, a. 2; and I, Q. xxi, a. 3).

It is obviously impossible to suggest a reason why this universe in particular should have been created rather than another; since we are necessarily incapable of forming an idea of any other universe than this. Similarly, we are unable to imagine why God chose to manifest Himself in the way He has provided. It is true that the universality of nature is such as to make it impossible to think of anything else for the existence of the order of nature. It will be observed that St. Thomas’s account of evil is a true Theodicy, taking into consideration as it does every factor of the problem, and leaving unsolved only the mystery of creation, before which all schools of thought are equally helpless. It is as impossible to know, in the fullest sense, why this world was made as to know how it was made; but St. Thomas has at least shown that the acts of the Creator admit of complete logical justification, notwithstanding the mystery in which, for human intelligence, they can never wholly cease to be involved. On Catholic principles, the amelioration of moral evil and its consequent reform can only take place by means of individual reformation, and not so much through increase of knowledge as through stimulation or re-direction of the will. But since all methods of social improvement that have any chance of success rely directly or indirectly on conformity with Divine laws, they are welcomed and furthered by the Church, as tending, at least indirectly, to accomplish the purpose for which she exists.

For ancient views of evil, see: Histories of philosophy by Zeller and Ueberwies; Darmsteter and Ansole, The Zend-Avesta (London, 1857); Monier-Williams, Buddhism, Brahmanism and Hinduism (London, 1889); Alzog, Univ. Church Hist. (Dublin, 1900); Copleston, Buddhism (London, 1908), 2nd ed. Eusebius. But the evidence is not in favour of this simplification. The year of the accession of Ignatius, that is of the death of Evodius, was unknown to Eusebius, for he merely places it in the "Chronicle" together with the death of Peter and the accession of Linus at Rome (Nero II.-VI.), while in the "History" he mentions it at the beginning of Trajan's reign.

The fame of Ignatius has caused later writers, such as Athanasius and Chrysostom, to speak of him as though he were the immediate successor of the Apostles, Jerome (De viris il., 16) and Socrates (H. E., VI, 8) call him the "third" bishop after St. Peter; but this idea they found among their own successors. Theoretor and Pseudo-Ignatius represent Ignatius as consecrated by Peter. The difficulty which thus arose about Evodius was solved in the Apostolical Constitutions by stating that Evodius was ordained by Peter and Ignatius by Paul. The Byzantine chronographer, John Malalas (X, 525), relates that as Peter went to Rome, and passed through the great city of Antioch, it happened that Evodius (sic), the bishop and patriarch, died, and Ignatius succeeded him; he attributes to Evodius the invention of the name Christian. Salmon does not seem to be justified in supposing that Malalas ascribes any of this information to Theophilus, the second-century Bishop of Antioch. We may be sure that Evodius never took power before 1160, since he was still bishop in 1170. Moreover, it is highly unlikely that he was the immediate successor of St. Ignatius. But the dates of his ordination and death are quite uncertain. No early witness makes him a martyr.

The Greeks commemorate together "Evodius" and Onesiphorus (II Tim., i, 16) as of the seventy disciples and as martyrs on 29 April, and also on 7 Sept. Evodius was unknown to the earlier Western martylogies than Hieronymian, and those of Bede and Florus; but Ado introduced him into the so-called "Martyrologium Romanum parvum" (which he forged not long before 860) and into his own work, on 6 May. His source was Pseudo-Ignatius, whom he quotes in the "Libellus de fest. Apost.", prefixed to the martyrology proper. From him the notice came to Usuard and the rest, and to the present Roman Martyrology.

Acta SS., 6 May: Salmo in Dict. Christ. Biog. s. v.; Harnack, Gesch. der Altrh. Litt., i, 721, ii, s. v. Chronol. part i, esp. 116-122; Quinto, Les Martyrologiques Bizantins (1868), nicesphorii callisti (i, 3), attributes writings to Evodius, of which one was called Spec. The Light: in it was stated that the entire Church of Christ and Antioch, and seven years more until the stoning of Stephen. A New is attributed to him in a Coptic papyrus published by Richard of Turin, Series XII, 1892.) See Harnack, i, loc. cit.

John Chapman.

Evolution.—This subject will here receive a two-fold treatment, as follows: A. The Theory Broadly Considered, and the Catholic Attitude in its regard; B. Its History and Scientific Foundations.

A. ATTITUDE OF CATHOLICISM TOWARDS THE THEORY.

One of the most important questions for every educated Catholic of to-day is: What is to be thought of the theory of evolution? Is it to be rejected as unfounded and injurious to Christianity, or is it to be accepted as an established theory altogether compatible with the principles of a Christian conception of the universe? The difficulties lie in the sharp, narrow, and technical difference in the meanings of the words theory of evolution in order to give a clear and correct answer to this question. We must distinguish (1) between the theory of evolution as a scientific hypothesis and as a philosophic speculation; (2) between the theory of evolution as based on theistic principles and as based on a materialistic and atheistic foundation; (3) between the theory of evolution as an hypothesis, and as a system, and (4) between the theory of evolution as applied to the vegetable and animal kingdoms and as applied to man.

(1) As a scientific hypothesis, the theory of evolution seeks to determine the historical succession of the various species of plants and of animals on our earth; and, with the aid of palaeontology and other sciences, such as comparative morphology, embryology, and bionomy, to show how in the course of the different geological epochs they gradually evolve from their beginnings by purely natural causes of specific development. The theory of evolution, then, as a scientific hypothesis, does not consider the present species of plants and of animals as formed directly created by God, but as the result of an evolution from other species existing in former geological periods. Hence it is called "the theory of evolution," or "the theory of organic evolution," and so on. It is a hypothesis of the development of the world, conceived and inferred from extinct species. This theory is opposed to the theory of constancy, which assumes the immutability of organic species. The scientific theory of evolution, therefore, does not concern itself with the origin of life. It merely inquires into the genetic relations of systematic species, genera, and families, and endeavours to arrange them according to natural series of descent (genetic trees).

How far is the theory of evolution based on observed facts? It is understood to be still only an hypothesis. The formation of new species is directly observed in but a few cases, and only with reference to such forms as are closely related to each other; for instance, the systematic species of the plant-genus Hemerocallis. It is acknowledged, however, not difficult to furnish an indirect proof of great probability for the genetic relation of many systematic species to each other and to fossil forms, as in the genetic development of the horse (Equus), of ammonites, and of many insects, especially of those that dwell as "guests with ants and termites, and have adapted themselves in many ways to their hosts. Upon comparing the scientific proofs for the probability of the theory of evolution, we find that they grow the more numerous and weighty, the smaller the circle of forms under consideration, but become weaker and weaker, if we include a greater number of forms, such as are comprised in a class or in a sub-kingdom. There is, in fact, no evidence whatever for the common genetic descent of all plants and animals from a single primitive organism. Hence the greater number of botanists and zoologists regard a polygenetic (polyphyletic) evolution as much more acceptable than a monogenetic (monophyletic). At present, however, it is impossible to decide how many independent genetic series must be assumed in the animal and vegetable kingdoms. The theory of evolution is the nearest to the theory of evolution as a scientific hypothesis. It is in perfect agreement with the Christian conception of the universe; for Scripture does not tell us in what form the present species of plants and of animals were originally created by God. As early as 1877 Knabenbauer stated "that there is no objection, so far as faith is concerned, to assuming the descent of all plant and animal species from a few types" (Stimmen aus Maria Laach, XIII, p. 72).

Passing now to the theory of evolution as a philosophical speculation, the history of the plant and animal kingdoms upon our globe is but a small part of the history of the entire earth. Similarly, the geological development of our earth constitutes but a small part of the history of the entire universe. The theory of evolution as a philosophical conception considers the entire history of the cosmos as an harmonious development, brought about by natural laws. This conception is in agreement with the Christian view of the universe. God is the Creator of heaven and earth. If God produced the universe by a single act, this is still within its natural development by laws implanted in it by the Creator is to the greater glory of His Divine power and wisdom. St. Thomas says: "The potency of a cause is the greater, the more remote the effects to which it extends" (Summa e. Gent., III, c. lxxvii); and Suarez: "God does not inter-
fere directly with the natural order, where secondary causes suffice to produce the intended effect" (De opere sex diernum, II, c. x, n. 13). In the light of this principle of the Christian interpretation of nature, the history of the animal and vegetable kingdoms on our planet is, as it were, a verse in a volume of a million pages in which the natural development of the cosmos is described, and upon whose title-page is written: "In the beginning God created heaven and earth." (2) The theory of evolution just stated rests on a theistic foundation. In contradistinction to this is another theory resting on a materialistic and atheistic basis, the first principle of which is the denial of a personal Creator. This atheistic theory of evolution is not only of the beginning of the cosmos or for the law of its evolution, as it acknowledges neither creator nor lawgiver. Natural science, moreover, has proved that spontaneous generation—i.e., the independent origin of a living being from non-living matter—contradicts the facts of observation. For this reason the theistic theory of evolution postulates an intervention on the part of the Creator in the production of the first organisms. When and how the first seeds of life were implanted in matter, we, indeed, do not know. The Christian theory of evolution also demands a creative act for the origin of the human soul, since the soul cannot have its origin in matter. The atheistic theory of evolution, on the contrary, rejects the assumption of a soul separate from matter, and thereby sinks into blank materialism. (3) Darwinism and the theory of evolution are by no means equivalent conceptions. The theory of evolution was propounded before Charles Darwin's time, by Lamarck (1809) and Geoffroy de Saint-Hilaire. Darwin, in 1859, gave it a new form by endeavouring to explain the origin of species by means of natural selection, as an outcome of the struggle for existence. The selection of species depends on the survival of the fittest in the struggle for existence. The Darwinian theory of selection is Darwinism—adhering to the narrower, and accurate, sense of the word. As a theory, it is scientifically inadequate, since it does not account for the origin of attributes fitted to the purpose, which must be referred back to the interior, original matter of the beings. Haeckel, in a subsequent, similar work, enlarged this selection theory of Darwin's into a philosophical world-idea, by attempting to account for the whole evolution of the cosmos by means of the chance survival of the fittest. This theory is Darwinism in the secondary, and wider, sense of the word. It is that atheistical form of the theory of evolution which was shown above—under (2)—to be untenable. The third signification of the term Darwinism arose from the application of the theory of selection to man, which is likewise impossible of acceptance. In the fourth place, Darwinism frequently stands, in popular usage, for the theory of evolution in general. This use of the word rests on an evident confusion of ideas, and must be rejected as untenable. (4) To what extent is the theory of evolution applicable to man?—That God should have made use of natural, evolutionary, original causes in the production of man's body, is per se not improbable, and was propounded by St. Augustine (see Augustine of Hippo, Saint, under V. Augustinism in History). The actual proofs of the descent of man's body from animals is, however, inadequate, especially in respect to paleontology. And the human soul could not have been derived through natural evolution from that of the brute, since it is of a spiritual nature; for which reason we must refer its origin to a creative act on the part of God.

B. History and Scientific Foundations.—The world of organisms comprises a great system of individual forms generally classified according to structural resemblances into kingdoms, classes, orders, families, genera, species. The species is considered as the unit of the system. It is designated by a double name, the first of which indicates the genus, e.g., canis familiaris, the dog, and conis lupus, the wolf. Comparing the species of the present day with their fossil representatives in the geological layers, we find that they differ from one another the more the farther we retrace the geological record. To explain this remarkable fact, two theories have been proposed, the one maintaining the stability and special creation of species, the other the instability and evolution, or genetic relation, of species. As is plain from the preceding section of this article, the principal difference between the two theories consists in this: that the theory of evolution derives the species of to-day by a progressive development from one or more primitive types, whilst the theory of constancy insists upon the special creation of each true species. It is generally admitted that the evolutive theory of species depends largely on the subjective views and experience of the naturalist.

We shall here confine our attention to the history and scientific foundations of the biological theory of evolution, leaving all purely philosophical and theological discussions to others. The entire subject will be divided into two parts: I. THE HISTORY OF THE SCIENCES OF EVOLUTION; II. DEFINITION OF SPECIES; III. VARIABILITY AND EXPERIMENTAL FACTS RELATING TO THE EVOLUTION OF SPECIES; IV. THE PALEONTOLOGICAL ARGUMENT; V. THE MORPHOLOGICAL ARGUMENT; VI. THE ONTOGENETIC ARGUMENT; VII. THE BIOGEOGRAPHICAL ARGUMENT.

Before we begin, we wish to remind the reader of the important distinction brought out in the preceding essay, that the general theory referring to the mere fact of evolution must be well distinguished from all special theories which attempt to explain the assumed fact by ascribing it to certain causes, such as natural selection, the influence of environment, and the like. Indeed, when an evolutive theory of species is, a posteriori, an attempt to account for the general, universal, specific theory of evolution—n is co ipso a Darwinian, or a Lamarckian, or an adherent of any special evolutionary system. No less important are the other definitions and distinctions emphasized above under A.

I. HISTORY OF THE SCIENTIFIC THEORIES OF EVOLUTION.—The historical development of the scientific theories of evolution may be divided into several periods. The main figure of the first period is Lamarck. The period ends with an almost complete victory of the theory of constancy (1830). The second period commences with Darwin's "Origin of Species" (1859). The idea of evolution, and in particular Darwin's theory of natural selection, enters into every department of natural science, and biological science is a great extent based on it as an important "principio de la naturaleza," the "principio del sistema," on the principle of the constancy and special creation of every species—"Species tot numerum quod diversus formas in principium sunt creatas" ('Philosophia Botanica', Stockholm, 1751, p. 99). For, "contemplating the works of God, it is plain to everyone that organisms produce offspring perfectly similar to their parents, or _systema_ ("Systema", Leipzig, 1748, p. 21). Linnaeus had a vast influence upon the naturalists of his time. Thus his principle of the con-
stancy of species was universally acknowledged, and this all the more because it seemed to be con-
*ected with the first chapter of the Bible. Georges Louis Leclerc Buffon (1707–88), the “suggestive”
author of the “Histoire naturelle générale et particulière,” was the first to dispute the Lamarckian doc-
manifold modifications of structure. Similar views were expressed by the German Gottfried Reinhold
Trevière, (1747–1824), and by the “theorist of evolution” J. W. Goethe (1749–1832). However, none of
these men worked out the details of a definite theory. The same must be said of the grandfather of Charles
Darwin, Erasmus Darwin (1731–1802), physician, poet, and naturalist, the first who seems to have an-
*icipated Lamarck’s main views. All animals un-
dersgo transformations which are in part produced by
*own exertions in response to pleasures and pains, and many of these acquired forms and propensities are
*mitted to their posterity’” (Zoonomia, 1794).
Jean-Baptiste de Lamarck (b. 1744) was the scientific
*ounder of the modern theory of evolution and its spe-
cial form, known as Lamarckism. At the age of fewte
-from the elective theory of Joseph de la Plante on
*brate zoology at the Jardin des Plantes (Paris). In
1819 he became completely blind, and died ten years
later in great poverty and neglected by his contem-
poraries, socially and scientifically. The main ideas
of his theory are contained in his “Philosophie zoolo-
*ique” (1809) and his “Histoire des animaux sans vertebrés” (1810–22). Lamarck disputes the immuta-
*bility of species. He argues that since nature is 
*any objective criterion for determining, with any de-
*ree of accuracy, which forms ought to be considered
* true species. Consequently, according to him, the
*ame species has only a relative value. It refers to a
*ollection of similar individuals “que la génération
*ertuant dans le même état tant que les circonstances
*eur situation ne changent pas assez pour faire varier
leurs habitudes, leur caractère et leur forme” (Phil. 
zool., I, p. 75).

But how are species transformed into new
*ies? As to plants, Lamarck believes that all
*anges of structure and function are due to the direct
fluence of environment. In animals the changed
ditions of the environment first call forth new
ants and new activities. New habits and instincts 
*with new organs spring from them that may be
*aken or weakened, newly adapted to the 
*uirements of new functions, or made to disapp
*ear. The acquired changes are handed down to the
*ffspring by the strong principle of inheritance. Thus
*he web in the feet of water birds was acquired 
*rough use, while the so-called rudimentary organs, 
e.g. the teeth of the baleen whale, the small eyes of 
the manatee, and the flippers that some bats have 
through disuse. Lamarck did not include the origin 
of man in his system. He expressed his belief in abi-
genesis, but he maintained at the same time that “rien
*n’existe que par la volonté du sublime Auteur de 
toutes choses” (Phil. zool., I, p. 56).

Lamarck’s theory was not sufficiently supported by 
*any experiments. Though no historical explanation of the origin and development of new organs, 
ough he did not ascribe the effect to a mere wish of the
*imal. Finally, he offered no proof whatever for his
osition that acquired characters are inherited. 
*arck had very little influence upon his own time.
 shortly after his death the famous discussion took
lace between Geoffroy Saint-Hilaire (1792–1854) and his 
*essor of vertebrate zoology Saint-Hilaire (1772–
1841) had long been the colleague of Lamarck. Saint-
Hilaire held the mutability of species, but ascribed the
main influence in its evolution to the “monde ambi-
*ant”*. Besides, in order to account for the disconti-
unity of species, he imagined that the environment 
could produce sudden changes in the specific char-
ters of the embryo (Philosophie anatomique, 1818).
In 1830 G. Saint-Hilaire presented to the French
Academy of Sciences his doctrine of the universal
unity of plan and composition in the animal kingdom.
Cuvier opposed it with his celebrated theory of the
four “embracements”, and showed that his adversary 
had mistaken resemblance for unity. Cuvier brought 
convincing facts in support of his attitude; 
Saint-Hilaire did not. That settled the issue. The
New Theory of Evolution had received a blow at the 
origin of all its forms. Lamarck’s theory was aban-
donned. Naturalists left speculation and returned for a few decades to an almost exclusive study of positive facts.
A single writer of some celebrity, Bory de Saint-Vincent
(1780–1846), took up Lamarck’s doctrines, but not 
without modifying them by insisting upon the final
constancy of specific characters through heredity.
Isidore Saint-Hilaire (1805–61), who shared the views 
of his father concerning environment and heredity, 
defended a very moderate theory of evolution. He
assumed a limited variability of species according to 
the variability of the environment.

Second Period.—Charles Robert Darwin’s book, on
the “Origin of Species by means of natural selection or 
the preservation of favoured races in the struggle 
for existence,” was published on 24 November 1859, marking a new 
epoch in the history of the evolutionary theory.
Through the principal factors of Darwin’s theory, namely
struggle, variation, selection’, had been enunciated by 
others, it was mainly Darwin who first combined 
them into a system which he tried to support by an 
extensive empirical foundation. Assisted by a
umber of influential friends, he succeeded in obtaining an
English university chair. He had already received the theory of evolution, though his special theory of natural 
selection gradually lost much of the significance at-
tached to it, especially by Darwin’s extreme followers.
Charles Robert Darwin was born at Shrewsbury, 12
February, 1809. From 1831–36 he accompanied as 
naturalist an English scientific expedition to South
America. In 1842 he retired to his villa at Down in
Kent, where he wrote his numerous works. He died on 
19 April, 1882, and was buried in Westminster
Abbey a few feet from the grave of Newton.
Biographical observations on his voyage to South
America led Darwin to abandon the theory of special 
creation. “I had been deeply impressed,” he says in 
his Autobiography, “by discovering in the Pampae the
anatomical proximity of species of potatoes and other 
forms like that on the existing armadillos; secondly by the 
manner in which closely allied animals replace one
another in proceeding southward over the continent; 
and thirdly by the South American character of most
of the productions of the Galapagos archipelago and 
more especially by the manner in which they differ 
slightly on each island of the group. . . . It was evi-
dent by that chain of facts that such a hypothesis 
that species gradually became modified.”
In order to account for the transformation, Darwin
began with a systematic study of numerous facts re-
ferring to domesticated animals and cultivated plants.
This was in July, 1837. He soon perceived that selec-
tion was the keystone of man’s success in making 
new races notably, by breeding only from useful vari-
at. But remaining a Biologist, Darwin hoped that selec-
tions could be applied to organisms living in nature.
In October, 1838, Darwin read Malthus’s “Essay on 
Population” and understood at once that in the strug-
gle for existence described by Malthus “favourable
variations would tend to be preserved and unfavour-
able ones to be destroyed, and that the result of this
selection or survival would be the formation of new
‘species’. The struggle itself appeared to him as a
necessary consequence of the high rate at which or-
ganic beings tend to increase. The result of the selec-
EVOLUTION
tion—that is, the survival of the fittest variations—was supposed to be transmitted and accumulated through the principle of inheritance. In this manner Darwin defined and tried to establish the theory of natural selection. Long after he had come to Down he added an important complement to it. The formation of new species implies that organic beings tend to diverge in character as they become modified. But how could this be explained? Darwin answered: Because the modified offspring of all dominant and increasing forms tend to become adapted to many and highly diversified places in the economy of nature. In short, according to Darwin, species are continuously transformed "by the preservation of such variations as arise and are beneficial to the being under its conditions of life", that is, by the survival of the fittest, which is to be considered "not the exclusive", but the "most important means of modification".

As his studies and observations progressed, Darwin lost his almost exclusive belief in his own theory, as he held it in 1859, and gradually adopted, at least as secondary causes in the origin of species, the Lamarck factor of the inheritance of the effects of use and disuse and the pleonastic factor of the direct action of the environment, especially in case of the geographical isolation of species. As to the human species, Darwin was, as early as 1858 or 1859, of the opinion that it was likewise no special creation but a product of evolutionary processes. The numerous facts which, according to Darwin, might be adapted to substantiate his views were contained in his work, "The Descent of Man" (1871). As a supplementary work to "The Origin of Species", Darwin published, in 1868, "The Variation of Animals and Plants under Domestication", which contains many valuable facts and theoretical discussions concerning variation and heredity. The principle of natural selection is certainly a very useful factor in removing variations not well adapted to their surroundings, but the action is merely negative. The main point (that is the origin and teleological development of useful variations) is left untouched by the theory, as Darwin himself has indicated. Moreover, no proof is brought forward that variations must accumulate in the same direction and that the result must be a higher form of organization. On the contrary, as we shall point out below, the experimental evidence of the post-Darwinian period has failed to substantiate Darwin's claim. It is, however, well to note that Darwin did not wish to ascribe the origin and survival of variations to chance. That word, he declares, is a wholly incorrect expression which merely serves to acknowledge plainly our ignorance of the cause of each particular variation. Later on, it is true, he seems to have abandoned the idea of design. "The old argument", he says in his "Autobiography" (1876), "... fails, now that the law of natural selection has been discovered." Similarly, his belief in the existence of God, which was strong in him when he wrote the "Origin", seems to have vanished from his mind in the course of years. In 1874 he confessed: "I for one must be content to remain Agnostic".

Of the numerous friends of Darwin who contributed so much to the development and spread of his theories, we mention in the first place Alfred Russel Wallace, whose essay on natural selection was read before the Linnaean Society, in London, 1 July, 1858, together with Darwin's first essay on the subject. The main work of Wallace, "Darwinism, a Theory of Natural Selection with Some of Its Applications" (1859), "treats the problem of the origin of species on the same general lines as were adopted by Darwin; but from the standpoint reached after nearly 30 years of discussion". In fact the book is a defence of pure Darwinism. Wallace, too, assumed the animal origin of man's bodily structure, but, contrary to Darwin, he ascribed the origin of man's "intellective and moral faculties to the unseen Universe of spirit" (Darwinism). Thomas H. Huxley (1825-1895) was one of the most strenuous defenders of Darwin's views; his book on "Man's Place in Nature" (1863) is a defence of man's "Oneness with the brutes in structure and theBuffonides Wallace and Huxley, there were the geologist Sir Charles Lyell, the zoologist Sir John Lubbock, and the botanists Asa Gray and J. D. Hooker. 1837 or 1838, of the opinion that it was likewise no special creation but a product of evolutionary processes. The numerous facts which, according to Darwin, might be adapted to substantiate his views were contained in his work, "The Descent of Man" (1871). As a supplementary work to "The Origin of Species", Darwin published, in 1868, "The Variation of Animals and Plants under Domestication", which contains many valuable facts and theoretical discussions concerning variation and heredity. The principle of natural selection is certainly a very useful factor in removing variations not well adapted to their surroundings, but the action is merely negative. The main point (that is the origin and teleological development of useful variations) is left untouched by the theory, as Darwin himself has indicated. Moreover, no proof is brought forward that variations must accumulate in the same direction and that the result must be a higher form of organization. On the contrary, as we shall point out below, the experimental evidence of the post-Darwinian period has failed to substantiate Darwin's claim. It is, however, well to note that Darwin did not wish to ascribe the origin and survival of variations to chance. That word, he declares, is a wholly incorrect expression which merely serves to acknowledge plainly our ignorance of the cause of each particular variation. Later on, it is true, he seems to have abandoned the idea of design. "The old argument", he says in his "Autobiography" (1876), ... fails, now that the law of natural selection has been discovered." Similarly, his belief in the existence of God, which was strong in him when he called by him "the survival of the fittest" ("Principles of Biology", 1898, p. 350). Trying to harmonize the Lamarckian and Darwinian factors of evolution, he was among the first to defend the so-called neo-Lamarckian theory, which insists upon the direct influence of the environment and the inheritance of newly acquired characters.

Before we enter upon the last phase in the development of the evolution idea, it is necessary to devote some space to the extreme defenders of Darwinism in Germany. Ernst Haeckel was the founder of the science of phylogeny, which seeks at least by way of hypothesis, to determine the genetic relation of past and present species. In 1868 Darwin wrote to Haeckel: "Your boldness makes me sometimes tremble"); this refers especially to the phylogeny, which is in fact an aprioristic structure often contradicted, and at almost no point supported, by experiment and observation. The tetrahedral carbon atom is, according to Haeckel, the external fountain head of all organic life. Through abiogenesis certain most primitive organisms are said to have been formed, such as "moners", which Haeckel described as unicellular beings without structure and without any nuclear differentiation. During ages of unknown duration these simple masses of protoplasm have been
evolved into higher plants and animals, man included. As one of his main arguments, Haeckel refers to the so-called “biogenetic law of development”. The supposed law maintains that ontogeny is a short and rapid repetition of phylogeny, that is, the stages in the individual development of an organism correspond more or less to the stages which the species passed through in their evolution. The causes of development are, according to Haeckel, the same as were proposed by Darwin and by Lamarck; but Haeckel denies the existence of God and rejects the idea of teleology.

Our leading scientists do not care to support the unfounded generalization of Haeckel’s ideas. They have even, most severely, justly, censured Haeckel’s scientific methods, mainly his frauds, his want of distinction between fact and hypothesis, his neglect to correct wrong statements, his disregard of facts not agreeing with his a priori conceptions and his unacquaintance with history, physics, and even modern biology. They have also pointed out that the biogenetic law of development is by no means a trust-worthy guide in retracing the phylogenetic succession of species, and that many other theories suggested by Haeckel are without foundation. But above all we must reject Haeckel’s popular writings because they contain numerous errors of every kind, and ridicule in a shameful manner the most sacred convictions and most noble instincts of the human spirit and moral nature, especially through the influence of “Die Welträtself” great harm was done to religion and morality, especially in Germany and in the English-speaking countries.

The present leader of extreme Darwinism is August Weismann of Freiburg (Vortrage über Descendenztheorie, 2d ed., 1904), the energetic opponent of Lamarck’s idea that acquired characters are inherited. Accord- ing to him, “every connection and law in the organism, every character which may be transmitted by heredity is pre- formed and prearranged in the architecture of certain ultra-microscopical particles composing the chromatin of the germ-cells. On account of qualitative differences the various groups of these ultimate particles or ‘biophores’ have a different power of assimilation. Besides, they are present in different numbers. In every organism of the same species, such intransfers or transferences will arise, especially after the germ-cells are united in fertilization. The outcome of the struggle will be that the weaker particles always or at times succumb. Thus the principle of the survival of the fittest is transferred to the germ-cells. Weismann, moreover, admits an indirect influence of the environ- ment upon the germ-cells in account for the facts of regeneration and reorganization established by Driesch, Morgan, and others, Weismann appeals at times to unknown forces of vital affinities, without, however, dismissing his thoroughly materialistic and antiteological suppositions. It will be superfluous to add that Weismann’s theory is a mere hypothesis without any foundation that can probably never be controlled by observation or experiment. But it has been acknowledged that Weismann was among the first to point out the intrinsic connexion between the evolution of species and the science of the cell. As extreme scientific opponents of Darwinism and evolution we mention above all the botanist Albert Wiegand and the zoologist and paleontologist Louis Agassiz, the well-known advocate of the simple idea of progress. Agassiz produced many an excellent argument against the ex- treme defenders of pure Darwinism, but, probably by attending too much to the exceedingly weak foundations of the current theory of the general development by small changes, they rejected evolution almost entirely. The most recent representative of such extreme views is the zoologist Alfred Fleischmann, who has become a complete scientific agnostic.

Third Period.—The third period in the history of the biological evolution theory has only in recent years assumed the form which marks it as a new epoch. Its path was prepared by the fact that two classes of naturalists had in course of time been drawing nearer to one another. On the one hand were those whose work was merely critical, by discriminating clearly between Darwinism and evolution, and on the other hand those who gave their individual attention to the work of experimental investigation. Only in recent years have the two classes joined hands and, in men like de Vries, Bateson, Morgan, have gained very efficient assistance. At the present time the greatest importance is laid on the explanation of the gaps in species, on the adaptation of organisms to environ- ment and on the part that evolution plays in the process, acquired, and above all on the idea of the segregation and the independence of biological characters, as was pointed out almost fifty years ago by Gregor Johann Mendel.

As far back as 1865, K. von Nägeli decided in favour of the general theory of evolution and against Darwinism. According to him progressive evolution required intrinsic laws of development, which, however, as he added, were to be sought for in molecular forces. Natural selection alone could only eliminate, that is to say, could only explain the survival of the more use- ful, but not its origin. Like Spencer, Nägeli was a determined precursor of neo-Lamarckism. This the- ory, which is now defended by many evolutionists, and has spots to find, is a sort of an intermediate phase, and disuse of organs with Saint-Hilaire’s theory of the influence of external circumstances. There are many evolutionists, such as Th. Eimer, Packard, Cunningham, Cope, who defend this view. However, the experimental evidence for the foundation of neo-Lamarckism—namely, the inheritance of acquired characters—is still wanting, or at least strongly debated. The greatest of Nägeli’s successors is the embryologist Th. Koehler’s „Bio- logische Theorie der Abstammungslehre”, appeared in 1884. The embryologist K. E. von Baer, who did not share the antiteological views of Nägeli, opposed no less energetically Darwin’s theory of natural selec- tion, because, as he argued, that theory does not ex- plain teleology and correlation, and is at the same time in contradiction to the persistence of species and the mutation of species. And yet within the system, especially his biogenetic law of development. But he maintained the transformation of species within certain limits through the agency of gradual and sudden changes. This leads us to the theory of saltatory evolution which is to-day most strongly defended by Bateson, de Vries and others. Some of the latest scientific investigators, such as Th. Kühn, C. Driesch, Th. Kölliker and St. George Mivart.

In his work “On the Genesis of Species” (1871) Mivart proposed a number of convincing arguments against the opinion of the power of natural selection as a prevailing factor. Ac- cording to him species are suddenly born and originate by some innate force, which works orderly and with design. Mivart concede that external conditions play an important part in the formation of species, and in some way determining evolutionary processes. But the transformation of species will mainly, if not ex- clusively, be produced by some constitutional affec- tion of the generative system of the parental forms, an hypothesis which Mivart would extend also to the first genesis of the body of man. Hugo de Vries (Die Mutationen, 1900) has more or less the same opinion, and Mivart, a typical representative of the exponents of the modern theory of saltatory evolution. He first endeavoured to show experimentally that new species cannot arise by selection. Then he attempted to de- monstrate the origin of new forms by saltatory evolu- tion. The principal illustration to establish his theory of mutants was the large flower, evening primrose (Evolution and Adaptation, 1903) summarizes this view as follow: “If we suppose that new mutations and
'definitely' inherited variations suddenly appear, of some of which will find an environment to which they are more or less well fitted, we can see how evolution may have gone on without assuming new species to have been formed through a process of competition. Nature's supreme test is survival. She makes new forms to bring them to this test through mutation and does not remodel old forms through a process of individual selection.' We shall see that de Vries overrated the importance of his experiments. Still it is not to be denied that he has become through his method a master for the experimental investigation of the problems of evolution. Of especial value is his analysis of the concept of species, though probably his greatest service is the rediscovery of Mendel's law and their introduction into the realm of biological investigations.

**Hugo de Vries**

The earliest forerunners of Mendel were the first scientific hybridists J. G. Kohler and T. A. Knight (1758-1838). Kohler's results are of special interest because, through the great contrast between the production of a hybrid with the pollen or ovules of one of the parents, forms appeared which more and more reverted to the characteristics of the respective parent. K. F. von Gartner (1772-1850) was the most prolific writer on hybridism of his time, though he did not surpass Kohler as to the positive results of his experimental research. C. Naudin's work on the hybridity in plants (1862) represented a considerable advance. The author pointed out that the facts of the reversion of the hybrids to the specific forms of their parents, when repeatedly crossed with the latter, are naturally explained by the hypothesis of the segregation of the two specific essences in the pollen grains and ovules of the hybrids (Leck). This formed in after years no small part of Mendel's discovery, which is indeed one of the most brilliant results of experimental investigation.

Gregor Mendel was born 22 July, 1822, at Heinzendorf near Odrau (Austrian Silesia). After finishing his studies he entered, in 1843, the Augustinian monastery at Brunn. Having been for fourteen years professor of the natural sciences, he was elected abbot of the monastery in 1868, and died in January, 1884. Mendel's celebrated memoir, 'Versuche über Pflanzenhybriden', appeared in 1865, but attracted little attention, and remained unknown and forgotten till 1900. It was based on experiments that had been carried out during the course of eight years on more than 10,000 plants. The principal result of these experiments was the recognition that the peculiarities of organisms produced entities independent of one another, so that they can be joined and separated in a regular way. As we have said above, H. de Vries was the first to recognize the value of Mendel's paper. Other investigators who have taken up the same line of work are Correns, Tschermak, Morgan, and, most of all, Bateson, the principal founder of 'Mendelism', or the science of genetics.

**II. Definition of Species.**—Before Linnaeus's time genera were considered to be the units of the plant and animal kingdoms, and it was assumed these had been created by God, while the species were descended from them. By the nomen specificum was understood the more or less short description by which Tournefort and his contemporaries distinguished the various species of genera. Linnaeus introduced the binomial system for establishing the species as the unit of the organic world.

There are as many species as there were different forms created in the beginning. The same theoretical norm had already been adopted before Linnaeus by the English physician John Ray (died 1678). The practical criterion for determining genera and species was taken from characteristic morphological features. For instance, the essential generic characteristic of the quadrupeds was derived from the teeth; that of birds from the bill. The species was designated in a similar manner "by retaining the primary characteristic among the various differences which separated two individuals of the same species." The establishment therefore of a genus or of a species depended ultimately, then as now, on the knowledge and subjective views of the systematist. The whole system was an artificial one precisely because it took note of one single feature alone, leaving the rest out of consideration; for instance, in the vegetable kingdom the characteristic of the flower alone was taken into consideration. Later on Linnaeus entertained the idea that originally God created only one species of each genus, and that the rest had been derived from these original species by cross-breeding. Linnaeus's conception of species was strengthened by Georges Cuvier, who defended the unchangeableness of the categories beginning with the species up to the four types (embranchemenl). He was supported in this, as was later L. Agassiz, by the absolute dearth of intermediate forms in geological strata. Hence arose his Theory of Catastrophes, which, in the same way as his former, was to his contemporaries but little plausible. Cuvier came victorious out of the controversy with Etienne Geoffroy Saint-Hilaire, who maintained the unity of the plan of animal structure and the continuous transition of forms in the animal kingdom. The view prevailing under Linnaeus and Cuvier were then divided into two main branches. (1) The more moderate Transmutationists held that all the species were the originally created units, and that from these all species and varieties were derived. (2) The followers of Linnaeus held, on the other hand, that the Linnaean species were the created units, and the subdivisions of these were the derived ones. Thus followed the Jordan schools, which asserted that within the Linnaean species were what they called "small species", individually variable, but specifically immutable (not connected by intermediate forms), and, as such, to be considered the true units or "elementary species". Linnaeus's *Drapa vera*, for instance, comprehends about 200 "elementary species". The norm or
criterion of the elementary species is the experimentally-proved constancy of the features (it is quite immaterial how small they may be) during a series of generations.

How are we to regard these opinions? Before answering this question we must strongly emphasize the fact that the biological idea of species has nothing whatever in common with the Scriptural conception or with that of Scholastic philosophy. The Mosaic story of Creation signifies nothing more than this, that ultimately all organisms owe their existence to the Creator. All the other refinements have due place to do with the proposition of faith regarding creation. The enumeration of certain popular groups of organisms, such as fruit-trees, draft-animals, and the like, could have no other design than to manifest to the simplest as well as to the most cultivated mind the action of the Creator of all things; at least, there can be no question of a scientific conception of genera and species. The biological concept of species is likewise removed from the philosophical concept which designates either the metaphysical or the physical species. The former is identical with the *integra essentia* (Uranbūrū)—"integral essence"—of a being; the latter is founded on the essence (*fundator in essentia*—T. Pech), and is to be recognized by some attribute (e.g., certain intellectual faculties) which remains constant and unchangeable in every individual of every generation and so appears to be necessarily connected with the most intimate essence of the organism (*accessorium cum rei naturali connecti*—Haan). The concept, therefore, of species according to Holy Scripture, Philoso-
fphy, and Science, is by no means a synonymous one for the naturalist is not always dealing with one group of organisms. Hence the first chapter of Genesis should not be brought into connexion with Linnaeus's "Systema naturae".

As far as the biological concept of species is concerned there is not up to the present time any decisive criterion by which we may determine in practice whether a given group of organisms constitute a particular species. The theory of species is isolated from one another by the fact of their possessing some important morphological difference which remains constant during a series of generations without the production of any intermediate form. If the differences are of less importance, but constant, we speak of sub-species (elementary species, Jordan species), whether intermediate forms and all deviations which are more strictly examined and set down as a variety. Such distinctions and criteria acceptable? Expressions such as "considerable," "essential," "more or less considerable" signify relative propositions. Hence it follows that the morphological determination of species depends to a great extent on the subjective estimate of the naturalist and on his intimate knowledge of the geographical distribution and habits of the organism concerned. In fact, the force of the term *species* differs greatly in the different classes of organisms. On this account the fact that species do not cross-breed, or at least that after a cross they do not produce fertile descendants, was added as an auxiliary criterion. This criterion, however, is an impractical one because it is not always possible to distinguish between species, and in the plant world in particular has many irregularities. Botany, therefore, the auxiliary criterion has been limited in the sense that within the species itself the fertility always maintains the same general level, while by the crossing of different species it diminishes very materially—propositions which do not admit of conversion and in their generalization can scarcely be called correct. Consequently, it would almost appear that Darwin was right when he said that the idea of species was "undefinable." Still, it is not to be denied that there are in nature definite and often important gradations and gaps by which the "good species," in contradistinction to the "bad species," are separated from one another. The same is also proved by the modern "mutation theories" which, on account of unconnected differences, admit a development of species by jumps.

The Darwinian principle of indefinite variability is contrary to facts, which in general show that, both in living nature and in geological strata, there exist types sharply discriminated from one another. However, it is quite impossible to say how many types compose the organic world. It will be the task of future research to determine the affinity which exists between such groups, and to establish the lower limit of similar sub-species and ascending to the highest forms whose common ancestry can be proved. These highest forms, which *per se* have nothing in common with the Linnaean species or genera, or with any other systematic groups, are the true units of nature; for they are composed of those organisms only which are related among themselves without being connected with the rest by common descent. We may, if we wish, identify these highest units with Wasmann's "natural species," or primeval ancestral forms, but, according to our opinion, neither the Linnaean species nor any other of the so-called systematic groups can be considered as the natural subdivisions of it. The Linnaean species are indeed indispensable in the classification of organisms; but these units are not suitable for the solution of the problem of development. In concluding this section we may add that the best example of a natural species, and one ratified by revelation, is the species Man, which, by reason of its wide range of variation and the relative constancy of its races, may offer many a happy point of inquiry among those who are interested in the vegetable and animal kingdoms.

In the following sections we shall see that there cannot be any doubt as to the evolution of species, if by species we understand such groups of organisms as are generally styled by botanists and zoologists systematic, or Linnaean, species. But if by the term *species* we are to understand groups of organisms whose range of variability would correspond to that of "the human species," then we believe that up to the present day there are no clear facts in favour of specific evolution. In particular, it will be seen that thus far there is no evidence of fact as to an ascending development of organic forms, though we do not deny the possibility of it provided an innate power of development be assumed, which operates in the following ways:--

**1.** Individual Differences. Individual differences include all fluctuating inequalities of an individual and of its organs—e. g., the size of the leaves of a tree, the percentage of sugar contained in the beet, and even more important morphological and physiological features. These differences may be quantitative (according to size and weight), meristic (as to numbers), and individually quantitative (e. g., the color of a child's hair). They are generally recognized from the fact that they oscillate around a certain mean, from which they deviate in inverse proportion to their frequency, a rule which primarily pertains only to quantitative differences. According to Darwinians, useful individual differences can be increased indefinitely by selection and may finally become independent of it. In this manner new species would result: Darwin himself sometimes considered single variations as of greater importance. The same view is strongly defended by modern evolutionists, who defend, at the same time, a direct influence of environment to which an organism adapts itself.
In order first of all to obtain a just estimate of the influence of selection, it must be pointed out that not everything that is attributed to selection has originated through selection. The origin of many pure breeds (e.g., of pigeons) is unknown, and cannot therefore without further investigation be ascribed to selection. Furthermore, many cultivated forms have arisen through crosses and segregation of characters, but not through merely strengthening individual characters. If we restrict our examination only to well attested facts, we find, first, that nothing new is brought about by selection; secondly that the maximum amount in quantitative modification is obtained in a few generations (mostly in three to five) and that this amount can only be maintained through constant selection. In case selection is stopped, a regression will follow proportional to the length of time required for the progress. In short, as far as facts teach us, new species do not arise by selection. But if qualitative changes were produced by some other cause, selection would probably be a potent principle in order to explain why some peculiarities survive and others disappear. The question is: Whether changes in the environment may furnish such a cause. There can be no doubt that the environment does influence organisms and mould them in many ways. As proof of this we need only draw attention to the different forms of Alpine and valley plants, to the formation of the leaves of plants according to the humidity, shadiness, or summness of the habitat, to the influence of light and temperature on the formation of pigment and colouring of the surface, to the strange and considerable differences produced, for instance, in knottweeds by merely changing the environment, and so forth. But as far as actual experiments show, the changes of characteristics and niceties of adaptation go to and fro, as it were, without transgressing definite ranges of variation. Moreover, it is not at all clear how discontinuity of species could have arisen by a continuous environment, whether acting directly, as Lamarck would have it, or as a selective agent, as Darwin would have it" (Bateson), unless one takes into account the accidental destruction and isolation of intermediate forms.

In spite of these conclusions it has been assumed that individual differences might lead to the formation of new species under the continuous influence of natural selection. Wasmann's well-known Dinarda-forms may serve as an example. The four forms of the rove-beetle, Dinarda, namely D. Märkeli, D. dentata, D. Hagensi and D. pygmaea, bear a certain relation with regard to size to the four forms of ants, Formica rufa, sanguinea, exsecta, fusco-rufibarbis, and to their nests, in which they live as tolerated guests. D. Märkeli, which is 5 mm. long, dwells with F. rufa, which is comparatively large and builds spacious hill-nests. D. dentata, which is 4 mm. long, lives with F. sanguinea, which is comparatively large, but builds small earth-nests. D. Hagensi, which is 3-4 mm. long, lives with F. exsecta, which is smaller than F. sanguinea, but builds a fairly roomy hill-nest. D. pygmaea, which is 3 mm. long, lives with F. fusco-rufibarbis, which is relatively small and builds small earth-nests. Moreover, the three first-named ants are two-coloured (red and black), and so are the corresponding Dinarda. The last-named ant, however, is of a more uniform dark colour, as is also the corresponding Dinarda. Now comparative zoogeography contains some interesting relations according to which the similarity of colour and proportion of size must be attributed to actual adaptation. For (1) there are regions in Central Europe in which only F. sanguinea with D. dentata, and F. rufa with D. Märkeli are found, whereas F. exsecta and F. fusco-rufibarbis do not harbour any Dinarda-forms at all. Secondly, there are districts in which the four forms of Dinarda are living with their four hosts and yet hardly ever showing transitional forms. Thirdly, in other parts there are more or less continuous intermediate forms, D. dentata-Hagensi living with F. exsecta, and D. Hagensi-pygmaea living with F. fusco-rufibarbis. The nearer a Dinarda approaches the form of D. pygmaea, the more frequently it is found with F. fusco-rufibarbis. To all this must be added, that the adaptation in general appears to have kept pace with the historical freeing of Central Europe from ice, though numerous exceptions must be explained by local circumstances, especially by isolation. Considering these facts, we are inclined to believe that D. pygmaea especially presents an example of real adaptation in fieri, though this adaptation cannot be called a progressive one, since the more recent forms, Hagensi and pygmaea, are only smaller in size and of a more uniform colour. But at the same time it seems to us that the adaptation of the Dinarda cannot be considered as an example to illustrate specific evolution, because, as we have shown elsewhere, there are many instances in nature—we mention only the races and other sub-divisions of the same species—that likewise present different degrees of adaptation far more pronounced than that found in the Dinarda, but which are not, as they cannot, be quoted as examples of the formation of new specific characters.

(2) Single Variations are presumably of far greater importance for the solution of the evolution problem
than individual differences; for they are discontinuous and constant, and are therefore capable of explain-
ing the gaps between existing species and those of
paleontology. We use the term single variation when,
from among a large number of offspring some one particular individual stands out that differs from
the rest in one or more characteristics which it trans-
mits unchanged to posterity. It is said to be peculiar
to the single variations that they cannot be reduced to
crosses. If this is possible, we speak of "analytical
variations". Favourable conditions for the appear-
cance of single variations are usually confined to
liberal supply of food, and excellent nourishment.
It is a remarkable fact that the fertility of single varia-
tions decreases considerably, and this the more so the
greater the deviation from the parents. Besides, the
newly produced forms are comparatively weak. This
weakness and inclination to sterility are facts which
must be carefully weighed when determining the prob-
able importance of single variations for specific
evolution. Besides, it is—to our knowledge—in no
case excluded that the suddenly arising form may be
traced back to former crossings. Probably the only
case which is quite generally interpreted to demon-
strate specific evolution experimentally is that of the
primrose observed by de Vries. After many failures
with more than 100 species, de Vries, in 1880, deter-
mined to cultivate the evening primrose (Euphorbia
Lamarckiana), whose extraordinary fertility had
attracted his attention. He chose nine well-developed
specimens and transplanted them into the Botanical
Garden of Amsterdam. The cultivation was at first
continued through eight generations. In all he exa-
named 30,000 plants, among which he discovered 800
deviant specimens, which could be arranged in
seven different groups, as shown in the following
table:—

The specimen of O. gigas (1895) was self-fertilized and
yielded 450 O. gigas forms, among which there was
only one dwarf form, O. gigas-manella. The three fol-
lowing generations remained constant. O. albida was
a very sickly form, though it succeeded, thanks to reg-
ular attention, in breeding constant offspring. Among
the O. oblonga descendants there was one specimen,
albida, and in a later generation one specimen of O.
rubr nervis. O. rubr nervis, O. rubr nervis subline-
aris, and O. rubr nervis sublinearis var. manella, as con-
stantly shown by Vries' observations (since 1886),
new forms also originated in nature, but they succumbed in
the struggle for existence. The differences between
the single forms relate to various parts and degrees of
development, though in several they are very slight.
The plants become either stronger or weaker, with
broader or narrower leaves; the flowers become larger
and darker yellow, or smaller and lighter, the fruit
longer or shorter, the outer skin rougher or smoother,
etc.

It may be conceded that the Euphorbia has de-
veloped constant forms corresponding to the so-called
"small or elementary species". The question, how-
ever, is, whether the forms are really new ones or
whether they owe their origin to some unexpected
original cross. In fact, if we are to suppose a previous
cross, perhaps O. Lamarckiana and O. sublinearis, then
the O. Lamarckiana of Hilversum had contained the
different constant variability forms and through ex-
hibition gradually reverted by throwing off the different
variations. At any rate, there cannot be any ques-
tion of a progressive development, for the reason that
none of the new forms shows the slightest progress in
organization or even development of any kind advan-
cing in that direction.

(3) Crosses and Mendelian Segregations. Cross-
breeding can in nature hardly be considered as a factor
in the progressive development of species; in particu-
lar, forms of different degrees of organization do not
cross, and if they did, all deviations would soon be
equalized according to the laws of chance and proba-
bility. All the greater seems to be the importance of
the Mendelian segregations. It may be known to the
reader that experiments of the Abbot Mendel were car-
ried on with seven different pairs of characters which he
crossed with one another, and then, by letting the cross-
breds self-fertilize, he continued the cultivation of the
plants through a series of generations. In the first generation it was found that
the offspring exhibited without exception the charac-
ter of one of the parents, that of the other parent not
appearing at all. Mendel therefore called the former
— the prevailing—character the "dominant" and the
other the "recessive". In the following generation,
which was produced by letting the cross-breds fertilize
themselves, the recessive character appeared and
moreover, in a definite proportion. On an average
this proportion was 2:89:1 or 3:1. In the second generation 75 per cent of the whole number of plants
exhibited the dominant character, and 25 per cent the
recessive. No intermediate forms were observed in
any case. In the third generation the offspring of the
recessives was constant and remained pure recessives,
but among the offspring of the dominants some
remained constant dominants, while others were hy-
bred. The average proportion of the constant domi-
nants (D) to variable cross-breds (DR) was as 1:2.
Thus, besides the 25 per cent of constant recessives
(R), there was also 25 per cent (one-third of 75 per
cent) constant dominants (D); and the third of 75 per
cent) constant variable crosses (DR) or 1D+2DR+1R.
The same proportion resulted from the following genera-
tions of the crossbreds, and since 1900 this has been con-
firmed by other investigators in the case of other plants (e. g. maize) and also of
animals (e. g. gray and white mice).

Mendel's rule of segregation, therefore, runs thus:
The hybrids of any two different characters produce seeds, one half of which again develop the hybrid forms, while the other half yield offspring which remains constant, and possess the dominant and recessive characters in equal proportion. A simple analysis of this rule shows that it consists of three parts: (a) By fertilization the characters of the parents are united, without, however, thereby losing their purity and independence; (b) in the offspring the characters of both parents may again be separated from each other; (c) the character of one of the parents may completely conceal that of the other. This last part of the rule is not, according to later investigators, necessarily connected with the other two parts. We may add that Mendel's rule also holds good for the offspring of hybrids, in which several constant characters are combined, and that in it there is found a splendid confirmation of the modern theory of the cell. Crossbreeding, therefore, does not by any means lead to the mixing of characteristics. Those, on the contrary, remain pure, or, at most, form new combinations or split up into simpler components. Hence, the idea that gaps in nature originate through such segregation is well founded. But the question, whether the idea is to be applied to the formation of species, and how this is to be carried out, can scarcely be answered at present. This much, however, is evident: that there is no progress in organization any more than there is any progressive specific development, brought about by segregation.

Hence this important conclusion follows: That the central idea of modern evolution theories—namely, progressive specific development—has not up to the present received any confirmation from observation of the world of organisms as it now exists. It is quite true, however, that the plasticity of organisms has been proved by a number of experiments to be very considerable; so that, in a constant environment, and by single variations, changes may be brought about which a systematist would classify as specific or even generic, if it were not clear from other sources that they are not such. In the same way forms could be developed by segregation, the characteristics of which would suffice "to constitute specific differences in the eyes of most systematists, were the plants or animals brought home by collectors" (Bateson). Yet such criteria are meaningless for the demonstration of the formation of species. The question as to the transmission of acquired characters is not by any means decided. It follows from the doctrine of propagation that only such characters can be transmitted as are contained in the germ-cells or which have been either directly or indirectly transmitted to them. Hence it is clear that all peculiarities acquired by the cells of the body through the influence of environment, or by use or disuse, can only be inherited if they are handed over, as it were, to the germ-cells. But it is useless to discuss the question before we have sufficient experimental evidence that acquired characters are at all inherited.

IV. THE PALEONTOLOGICAL ARGUMENT.—(1) HISTORICAL METHOD. Before entering upon the discussion of the evidence furnished by paleontology we must briefly refer to the method which ought to be employed in the interpretation of the paleontological records. The great archives of the geological strata are very incomplete. Almost three-quarters of the earth's surface is covered with water, and another part with perpetual ice; and the rest but a fraction has remained free from the ravages of water and the elements; of this small portion, again, only certain regions are accessible to the investigator, and these have been but partially examined. Besides, in most cases only the hard portions of organisms are preserved, and even these are often so badly mutilated that their correct classification is sometimes difficult. Many of them, especially in the oldest rocks, must have perished under the crushing force of metamorphic processes. Further, the geographic distribution of plants and animals must have varied according to climatological and topographical mutations. It may suffice to cite the glacial periods of which there are clear indications in various geological epochs. Finally, the geological data point to the continuance of different strains and displacements, being upheaved, tilted, folded again, and even entirely inverted. It is evident that every one of these phenomena increases the chaos in its own way and makes the work of classifying and restoring all the harder. It gives at the same time to the scientist the right to formulate hypotheses probable in themselves and adapted to bridge over the numerous gaps in the work of classification of the organic world. But these working hypotheses ought never to assume the form of scientific dogmas. For after all, the documents which have really been deciphered are the only deciding factor. At all events, the chronological succession and the genetic relation of organisms cannot be determined by aprioristic reasoning, or by means of our system of classification, or by applying the results of ontogenetic studies. One illustration may suffice. Some maintain that trilobites are descended from blind ancestors because certain blind forms exhibit a number of simple characteristics which are common to all specimens. And yet we know that, e.g., *Irinucleus* possesses eyes in the early stages of its development, and that the blind in the later stages. The non-existence of eyes is, therefore, due to degeneration, and does not point to a former eyeless state. As a matter of fact, specimens of trilobites possessing eyes are found side by side with eyeless specimens in the lower Cambrian strata. Other examples of false a priori conclusions are to be found in the extraordinary genealogies constructed by extreme evolutionists, and which dissolve like so many mists in the light of advancing investigations. In fact, up to the present the agreement on ontogeny and phylogeny has not been proved in any single instance. In short, if we disregard observation and experiment on existing organisms, it is the historical method alone which can decide the limits of evolution and the sequence and genetic relations of the different forms. "In the substitution of the hypothetical ancestors by real ones lies the future of true phylogenetic science" (Handlirsch).

(2) THE OLDEST FOSSILS. Now let us turn to the documents themselves and see what they have to show us. The foundation of the Archives is formed of gneiss and crystallized-slate, a rich and varied store-house of life, and one which offers to the paleontologist the hopeless outlook that his science must remain in a very incomplete state, perhaps forever. Immediately above this foundation, nature has imbedded the multitudinous, highly-developed Cambrian fauna, with-
out leaving the slightest trace of their antecedents, origin, birth, or age. Some 800 species of this remnant period are known to us. They belong almost without exception to marine fauna, and are distributed over all the chief groups of the invertebrates. Nearly one-half of them are arthropods. They are the well-known trilobites which occupy a position about the middle of the scale of animal development. Other groups belong to other phyla—echinoderms, gastropods, and cephalopods. Sponges, too, and traces of worms are found, as also very imperfect fragments of scorpions and other insects. Moreover, there can be no doubt that various types of fishes must have existed, since in the Silurian age numerous representatives, such as selachians, ganoids, marsipobranchs, dipnoans, and the like, are known in the geological record. Where are the ancestors of these highly specialized beings? The one thing we may affirm is that we know absolutely nothing whatever of a primitive fauna and of the numberless series of organisms which must have followed them up to the Cambrian era, for the simple reason that we possess absolutely no evidence. Moreover, there is not the least trace of palaeontological evidence in favour of the spontaneous generation of life or of the ascending development out of primitive protoplasmic masses up to the time of the Cambrian era. The Cambrian types were all of them specialized forms perfectly adapted to time and environments, and not generalized types of zoological systems. The origin of the plant world is also shrouded in impenetrable darkness. It seems, however, that in the earliest Devonian strata, the oldest of all the Carboniferous deposits, leaves and traces of ferns have been found which are characteristic of the oldest Devonian flora. The oldest fossil genera of ferns, however, have been discovered in the Silurian strata of North America, particularly in the state of Ohio. The oldest strata of these ferns are known as the St. Gotthard group, which consists of brachiopods, molluscs, and corals. The earliest forms of the group are known as the M. calamos, which is the oldest genus of the group. The M. calamos is the oldest genus of the group, and is known from the earliest strata of the Carboniferous period.

(3) Angiosperms and Vertebrates. But how did the undoubtedly higher forms of a later period originate? To begin with the angiosperms, we are confronted with the fact that these organisms appear quite suddenly in the Cretaceous era, and what is more remarkable, the oldest known angiosperms are of the same age as the oldest reptiles. It is a fact that principally the dicotyledons (at least those in the more recent strata) correspond more and more to the present-day forms, clearly indicating the relationship they bear to one another. But whence the earliest forms of the Cretaceous era, is shrouded in mystery. Similarly, the origin of the angiosperms is unknown. It cannot be proved in any concrete case. Only this much is certain, that if evolution took place, it involved a change which did not imply attainment to a higher stage of organization. It must be borne in mind, moreover, that we know of no intermediate forms capable of justifying even as much as a hypothesis that angiosperms were evolved from lower plants. If the origin of the angiosperms is for the present an insoluble problem, the genesis of the vertebrates is no less so. However, in order not to pass entirely over the post-Cambrian history of the vertebrates, we must at least make mention of the significant fact that this fauna seems to be constantly changing, but without ascending to higher forms of organization. The modification is especially manifest in the shell-bearing groups, owing to the changed size, form, and ornamentation of their shells, and in this offers a very striking basis for the establishment of a series of kindred forms—e. g., with the gastropod genus Paludina of the Silurian strata. But since such structures depend almost entirely on the calcareous nature of the medium, and on the varying kind and amount of movement, we can scarcely be inclined to regard an increased ornamentation of the shell as a mark of the same change, but rather as most as a temporary development of actual dispositions due to varying conditions of life.

The first authenticated ancestors of the vertebrates are the fish-remains of the lower Silurian era. Widely removed from them we find in the carboniferous strata the oldest remains of the amphibian quadrupeds and, associated with them, forms of reptiles. The sudden appearance and equally sudden disappearance belong to the unsolved problems of palaeontology. Among the Mesozoic fishes we encounter old forms together with teleosts which suddenly appear in the Jurassic strata without producing any transitional forms. It is generally supposed that the teleosts represent a higher grade of organization than the ganoids; as the ganoids, to which the Mnemosyne refer, have no structural advantage over the cartilaginous fishes in the lighter hardness of the scale and the greater hardness of the skeleton. This is, however, but a shifting, as it were, of development, as the disappearance of the rigid body-covering is compensated for by the ossification of the skeleton. At any rate, the origin of the teleosts has not yet been satisfactorily explained, and the origin of the ganoids is still another unsolved problem of palaeontology.

The appearance of birds and mammals is likewise very mysterious. The first known bird is the famous "bird-reptile" Archaeopteryx of the Jurassic strata of Solnhofen. In spite of some characteristics which remind one of reptiles—as for instance the twenty homologous caudal vertebrae, the talons, the separated metacarpal bones and the long clavicles—yet the bird was feathered, with the plumage, the pinions, and the bill. In fact Archaeopteryx is far removed from the reptiles, nor does it constitute any connecting link with the later birds, not even with the toothed Ichthyornis and Hesperornis of the upper Cretaceous era. Certainly the two isolated specimens from Solnhofen indicate that birds must have existed a long time before; but where their place of origin is, one is at a loss.

Palaeontology is silent likewise about the early history of mammals. The mesozoic representation of this class may have some connexion with marsupials, monotremes, and insectivorous animals, but as to the early history of the great majority of placental mammals we have no evidence whatever. A transition intermediate to their palaeontological representatives of the Eosauropoda. Upon the facts embodied in this table, which chiefly refer to fossils found in North American strata, the following comments are suggested: The genera of the Equidae lived contemporaneously, though it must be conceded that in some sedimentary deposits their series seems to be continuous. Secondly, the sub-families show great differences between one another. Of the Merophilippus, which connects the Equidae with the Palatherina, we know only
the teeth. Thirdly, if we take the European material into consideration as well, we are confronted with widely divergent opinions, so much so that the brilli-

ant pedigree becomes greatly dimmed. In particu-

lar, the Eocene forms and the still more remote genus

Phenacodus are avowedly very dubious ancestors

of the horse. Lastly, it is well within the range of possi-

bility that the ancestors of the Equus and the de-

scendants of the older sub-families have remained un-

discovered up to the present time.

(4) Man. It remains for us briefly to examine the

historical records to see if we can obtain reliable infor-
mation concerning the last and most important

“ascent” to Homo sapiens. The oldest authenticated

traces of man consist of stone implements, and they

are derived from the lower Quaternary strata.

Whether the so-called “oliths” of the Tertiary are

really the handiwork of man, cannot be decided with

certainty. Eminent scientists, as Boule, Ober-

maier, de Lapparent, in their works published in 1905,

have denied the human origin of these objects.

Concerning the first stages in the civilization of diluvian

man little can be said. This period, according to

Hoernes, falls under three sub-groups, separated from

one another and preceded by a glacial period.

The first intermediate epoch (époque du grand ours) lies

close to the Pliocene age, and is called, after the principal

place of its discovery, the stage of Tilloux-Taub-

bach (Krapina), or Chelôn-Moûstérin. The fauna is

mostly tropical and includes, among others, Elephas

antiquus, Rhinoceros Merckii, and, most important of

all, Ursus spelus. Taubach’s field of discovery was a

camp in which the fireplace, remnants of food, and the

simple utensils of Germany’s first inhabitants were

found in situ (Hoernes). The second intermediate

époque du mammouth) is named the Solutrén stage,

after the place where important discoveries were

made in France. It contains, besides the mam-

moth, the woolly rhinoceros and numerous other ani-

mals such as Leo, Ursus, Hyena, etc., though the num-

bers greatly decrease as we draw to the end of the

period, while the Ursus spelus becomes entirely ex-

tinct. A large number of the stone implements are of

fine workmanship and there are, besides these, various

kinds of carving on bone and ivory, plastic figures of

meas and drawings of animals on the walls of the caves.

The cave of Combarelles (Dordogne), for example, is
decorated with 100 drawings of animals. The orna-
mantion in the Solutrén, with its wavelike curves

and spirals, indicates an almost enigmatic degree of
development which would appear to be more in keep-

ing with the culture of the metal age than with the

more remote stone age. The third intermediate

epoque du renne) had a blloed name. It is

called the Magdalenian stage, after La Magdalenie, in

France. The stone implements are homely, but often

very finely constructed, “small implements made for
delicate hands by delicate hands” (Hoernes).

Pointed and hooked hunting weapons were also found,

as well as numerous instruments of various kinds

manufactured out of bone and horn, and all of them

reveal considerable artistic taste and judgment. Real

frescoes adorn the walls of the Font-de-Faune cave.

In all, eighty figures are represented, of which number

forty-nine are those of bisons.

From what has been said we may conclude that

man, in the first stage of civilization known to us, ap-

pears as a true Homo sapiens; but how he arrived at

that stage is a problem we are quite unable to answer,

because all records are wanting. The bones, too,

Cranium of Pithecanthropus Erectus

the teeth; the skull and the thigh-bone were

found lying about 16 yards apart. It is true the skull

differs somewhat from the skulls of present-day an-
thropoids; it is, however, in general characteristics

to be somewhat like, as was pointed out recently by

Schwalbe, Khantseh, Mechnamara, and Kohlrugge.

The thigh-bone, according to Bumiller, bears the clos-
est resemblance to the femur of the ape Hylobates.

Hence the appellation erectus is a misnomer. Add to

this that, according to the latest researches, Pitheca-
nthropus must have been a contemporary of primitive

man, since the strata in which the bones were found

are diluvial. Hence Pithecanthropus cannot belong to

the ancestral line of man. The bones of the Neander-

tal race of the Homo primigenius are undoubtedly
human, and have given rise to renewed interest through the valuable discoveries made in Krapina. The Neandertal skull itself serves as a type which, owing to the low, receding forehead and the strongly developed supra-orbital ridges, appears to be very primitive, though no one knows the exact geological conditions of the place where it was originally deposited. We pass over the fact that twenty scientists have expressed twelve different opinions on this mysterious cranium, and confine ourselves to the latest opinion of Schwalbe, who says that the Neandertal cranium exhibits forms which are never found in either a normal or a pathologically altered Homo sapiens, whether Negro, European, or Australian, and yet at the same time the skull does exhibit human characteristics. In a word, the Neandertal skull does not belong to any variety of Homo sapiens, Kohlbrugge very aptly compares Schwalbe’s hypothesis to an upturned pyramidal balancing on a fine point, whether Australian or Negroid skull which may be found to agree with the Neandertal skull suffering throw the hypothesis. Such a skull has not as yet been found, but there are other factors which suffice to shake Schwalbe’s hypothesis. These have reference to the other diluvial bones remains of Homo primigenius, amongst others to the petrified Gibraltar skull, to two molar teeth from the Taubin cave, to the two fragments of a skull from the mammoth caves of Spy, and the jawbones from La Naullette, Schipka, Oekos, and, finally, to considerable remains of bones, such as fragments of skulls, lower jawbones, pelvic bones, thigh and shin bones, from a cave near Krapina in Croatia. To these must be added the “Monster skull” which was dug up in August, 1908, in Vezere-tal (Dordogne). All these fragments possess fairly uniform characteristics. Especially noteworthy is the fact that they are, above all, the cranium with its prominent supra-orbital ridges and receding forehead. These qualities, however, are not infrequently found in men of the present day. Australians exhibit here and there even the genuine supra-orbital ridges (Gorjanowic-Kramberger). It cannot be clearly decided whether we are dealing with purely individual characteristics or with peculiarities which would justify us in classifying the Krapina fragments as belonging to a special race. But this much is clear, that the formation of the skull and the degree of civilization of that race are quite sufficient to permit of our designating Homo primigenius not as a species of itself, but merely as a local sub-division of the Homo sapiens. The Galley Hill skulls exhibit the same characteristics as yet known to us. Krapina bones, points to the same conclusion and corresponds with the more recent skulls of post-diluvial man. Hence, to sum up, we may affirm that we are acquainted with no records of Tertiary man, that the most ancient remains of the Quaternary belong to the Galley Hill man, whose skull worthy represents Homo sapiens. The same is to be said of the oldest traces of civilization as yet known to us.

Paleontology, therefore, can assert nothing whatever of a development of the body of man from the animal. It may be added that Haeckel’s curious “Progonotaxis”, or genealogy of man, is a pure fiction. It consists of thirty stages, beginning with the “mon-
analyses of structure and function in vastly different groups. Finally, the chief problem, which refers to teleology of adaptive modifications, is not even touched by the doctrine of descent from common ancestors.

(2) Man and the Anthropoids.—Palaeontology knows of no records that point to the relationship between the body of man and that of the anthropoid. Hence it follows that the argument of analogy and classification is of little worth. But, as ever and again attempts are made to discover analogies between every bone of man and the corresponding part of the ape (e.g. Wiedersheim), it will be useful to gather a few of the more important morphological discrepancies which exist between man's body and that of the anthropoids (orang-utang, chimpanzee, gorilla). It is, however, far from our intention to attribute to these differences any great argumentative force, especially against those who suppose that there was a common primate ancestor from which both man and ape finally descend; nor do we wish to deny that zoologically the human body belongs to the class of the mammals, nor that within this class there is any representative more similar to it than the anthropoids.

Of these differences the most important lies in the development of the brain of man and of the anthropoid, which is seen from the comparison of the weights. According to Wiedersheim we are forced to admit that the relative mass of the human brain is twice that of the chimpanzee, while, absolutely, it is from three to four times as great. The same is probably true of the orang-utang, while the brain of the gorilla, which, according to Wiedersheim, is the most humanlike of any of the anthropoid brains, is relatively only one-fifth that of man's. The human skull is from three to four times as large as that of the anthropoids. The difference becomes much more striking still when we compare the cerebral hemispheres and their convolutions. The weight of the brain of a male Tarenton of from thirty to forty years of age is on the average 1421 grammes, that of a female 1273 grammes, and that of a full-grown orang only 797 grammes (Wundt). The proportion is therefore from 18:1 to 16:1. If we measure the superficial area of man's brain with all its convolutions and that of the orang we have, according to Wagner, from 1877 sq. cm. to 2196 sq. cm. for the human brain and 533-5 sq. cm. for that of the orang—that is a proportion of 4:4:1. It is further to be taken into consideration that, as Wiedersheim points out, the human brain is not to be looked upon as an enlarged anthropoidal one, but as a "new acquisition with structures which the anthropoidal does not as yet [i] possess". These new acquisitions are presumably qualitative and refer mainly to the centre within the great cerebral hemispheres. Intimately connected with the development of the brain is the moderate development of the dentition of man in comparison with the chinless snout of the monkey, which is armed with powerful teeth. Again, "the human face slides as it were down from the forehead and appears as an appendix to the front half of the skull. The gorilla's face, on the contrary, protrudes from the skull, which on return slides almost entirely backwards from the face... It is only on account of its protruding, strongly developed lower parts that the small skull-cap of the animal can mask as a kind of human face" (Ranke).

A second group of differences is obtained by comparing the limbs of man and the anthropoid. Owing to his upright stature, man's appendicular skeleton is quite different in form and structure from that of the anthropoid. This is shown not merely by the length of the single parts, which, strangely enough, exhibit inverse proportions, but also in the interior structure of the bones, as was proved by Walkhoff (1905) in the case of the femur. If we suppose the length of the body to be 100 we have, according to Rauke, the following proportions:—

<table>

The sponge-like structure in the femur of man and anthropoid exhibits considerable difference, so that it could be established by means of radiograms whether the femur was that of an upright walking individual or not; e.g., it was possible to prove the Neandertal and Spy femora to be human. The foot of man is, moreover, very characteristic. It is not furnished with a thumb that can be bent to the whole member, and hence it does not represent a typical prehensile organ, as is the ease with the hind feet of the monkey. In general, each bone and organ of bone could in some sense be styled ape-like, but in no case does this similarity go so far that the form peculiar to man would pass over into the form which is peculiar to the ape. This conclusion is confirmed by the fact that, according to Runke and Windisch, efforts to discover a series of bodily formations which would lead from the most apelike savages to the least apelike Caucasians have till now resulted in utter failure, since the apelike forms of organs actually found in some individuals are not confined to a single race or nation, but are distributed throughout all of them. Tailed ape-men, in the proper sense of the word, have no existence. If sometimes tail-like appendages occur, they are genuine deformities, pathological remnants of the individual’s embryonic life. Cretins and microcephali are likewise pathological cases. The theory that such were the ancestors of the human species is certainly excluded by the fact that they are unable to procure independently the necessary means of existence.

(3) “Blood Relationship” between Man and the Anthropoid.—In 1900 Friedenot thought that he was able to prove the kinship of man and the anthropoid biologically by showing, first, that the transfusion of human blood-serum into the chimpanzee was not followed by any signs of blood-poisoning, as usually happens on the introduction of foreign blood, and, secondly, that human serum did not produce a reaction when introduced into a solution of the blood of the orang and gibbon, while on the other hand it dissolved the blood corpuscles of the lower apes. A little later Nutall and others proved that anti-sera exercised an opposite effect. An “anti-man-serum” was prepared by injecting subcutaneously sterile human serum into a rabbit till the animal became immune to poisoning from the foreign blood-serum. The “anti-man-serum” of rabbit-blood thus prepared gave a precipitate with the blood-serum of man or of an animal with chemically similar blood, for instance anthropoids, but not with the serum of chemically different blood. The force of the argument lies, therefore, in this, that the chemical reaction obtained seems to be on the whole proportional to the degree of their chemical affinity.

What follows from these facts?—Only this, that the blood of man is chemically similar to that of the anthropoids; but it does not follow that this chemical similarity must be attributed to any kinship of race.

The mistake arises from the confusion of the ideas “similarity of blood” and “blood-relationship” in the genealogical sense of the term; otherwise it would be at once perceived that the fact of chemical similarity of blood is of no more importance for the theory of evolution than any other fact of comparative morphology or physiology.

(4) Rudimentary Organs.—One of the special arguments commonly cited in favour of the evolution theory is based on the frequent occurrence of rudimentary structures in organisms. As examples we may mention the following: Pythons and boa possess vestiges of hind legs and of a pelvis separated from the vertebral column.—The slow-worm is without external limbs, and yet possesses the shoulder-griddle and the pelvis, as well as a slightly developed breast-bone.—The ostrich has merely stunted wing-bones, while the nearly extinct kiwi (apertyx) of New Zealand has only extremely small stumps of wings, which are clothed with hair-like feathers.—The gigantic birds of New Zealand which became extinct in past ages were entirely wingless.—Well worthy of note, also, are the rudimentary organs of the whale (Cetacean), since of the hind limbs only a few minute bones remain, and these are considered to be the pelvic bones, while the Greenland whale (Balae mysticetus) also possess vestigial hip and leg bones. The bones of the fore-limbs are not movable independently of one another, being bound together by means of tendons.—Other remarkable vestigial structures are the teeth of the Arctic right whale, which never penetrate the gums and are reabsorbed before birth, the upper teeth of the ox, the milk teeth, and the eyes of the mole. The deep sea fish, like the Baropeurus, have instead of eyes “two golden metallic eyes on the mirror” (Chun).—Nor is man devoid of rudimentary organs. Wiedersheim mentions no fewer than one hundred But of these only a few are genuine. The vermiciform appendix may serve as an example, though according to recent research it is not entirely functionless. Its length oscillates between 2 cm. and 23 cm., while its breadth and external form vary exceedingly. Probable reasons for its partially rudimentary character are, besides its extreme variability, especially two facts in particular: the length of the organ, compared with that of the large intestine is as 1:10 in the embryo, and as 1:20 in the adult; secondly, in 32 per cent of all cases among adults of over twenty years of age the appendix is found to be closed.

Do such rudimentary organs furnish us with an acceptable proof for the theory of evolution?—It is to be admitted that in many instances the organs were
formerly in a more perfect condition, so as to perform their typical functions—e. g., the eyes of the mole as organs of sight; and the limbs of the kiwi as means of locomotion for running or even for flying. Hence those individuals which now possess rudimentary organs are descended from ancestors which were in possession of these same organs in a less degenerated condition. But it cannot be ascertained from the structure of these ancestors whether those ancestors were of another kind than their offspring. That the correspondence between man is fully explained by supposing it to have had in the antediluvian man a more perfect function of secretion, or even of digestion. Until the paleontological records furnish us with more evidence we can only conclude from the occurrence of rudimentary structures that in former ages the whole possessed better development of those organs which are the forebears of the lower limbs, wings, etc. In short, rudimentary organs per se do not prove more than that structures may dwindle away by disuse.

Haeckel's endeavour to invalidate the teleological argument has no foundation in fact. In many cases the function of rudimentary organs has been discovered—e. g., the rudimentary teeth of the whale are probably the forebears of the bony ridge of the slow-worm as a protection of the chest. But even in instances in which we have not succeeded in discovering the function of such structures, it must not be forgotten that degeneration may be eminently teleological in furnishing material for other organs whose functions become more important. Moreover, as we are dealing with organs which develop during the progress of ontogenesis, and under altered circumstances, the starting-point for an appropriately modified reorganization. It is indeed difficult to see how "dysteleology", as Haeckel calls it, follows from the fact that an organ adapted to specified means of livelihood disappears, probably in order to strengthen other organs when those means of livelihood are changed; and, until the contrary is proved, we must assume that the having dealt with the instances of teleological adaptation and correlation, as has already been demonstrated in many cases—e. g., in the development of amphibians.

VI. THE ONTOGENETIC ARGUMENT.—Comparisons between the embryos of higher forms and the adult stages of lower groups were made long before the evolution theory was generally accepted. But it was only after 1859 that the facts of embryology were interpreted by means of that theory. Fritz Müller (1864) was one of the first to advance the view that the ontogenetic development of an individual is a short and simplified repetition of the stages through which the species had passed. Haeckel modified the proposition by introducing the term "karyogenesis", which should account for all points of disagreement between the two series of development. In its new form the theory of recapitulation received the name "the biogenetic law of development". Later on Hertwig reformulated the law a second time by changing the expression "repetition of forms of extinct ancestors" into "repetition of forms necessary for organic development". The new law is supposed to reflect the complex. Besides, considerable changes, generally in an advancing direction, are said to have been brought about by the action of external and internal factors, so that in reality "a later condition can never correspond to a preceding one". Both Haeckel's and Hertwig's views were rejected by Morgan, who does not believe in the recapitulation of ancestral adult stages by the embryo, but tries to show that the resemblance between the embryos of higher forms might be due to "the presence in the embryos of the lower groups of certain organs that remain in the adult forms of this group". According to Morgan, we are justified in comparing "the embryonic stages of the two groups only—a theory which he calls "the repetition theory". Perhaps the most striking fact to illustrate the ontogenetic argument is the resemblance between the gill-system of fishes and certain analogous structures in the embryos of the other vertebrates, man included. However, contrary to the statements of most scientists, we do not think that the resemblance is such as to justify us in concluding "with complete certainty that all vertebrates must in the course of their history have passed through stages in which they were gill-breathing animals" (Wiedersheim). The embryos of fishes are at a certain very early stage of development furnished with vertical pouches which grow out from the wall of the pharynx till they fuse with the skin. Then a number of vertical clefts (gill-slits) are formed by the fact that the walls of the pouches separate. In the adult fishes the corresponding openings serve to let water pass from the mouth through the gill-slits, which are covered by the capillaries of the gill-flaps. In this way the animal is enabled to provide the blood with the necessary oxygen and to remove the carbon dioxide. Now it is quite true that in all vertebrates there is some resemblance as to the first formation of the pouches, the slits, and the distribution of blood-vessels. But it is only in fishes that real gill-structures are formed. In the other vertebrates the development does not proceed beyond the formation of the apparently indifferent pouches which never perform any respiratory function nor show the least tendency to develop into such organs. On the contrary, the gill-slits and arches seem to have, from the very beginning, a totally different function, actually subserving, at least in part, the formation of other organs. Even the amphibians that are furnished with temporary gills form them in quite a peculiar manner, which cannot be compared with that of fish-embryos. Besides, the distribution of blood-vessels and the gradual disappearance of seemingly useless structures, as the "gill-systems" of vertebrates seem to be, may likewise be observed in cases where no one would seriously suspect a relation to former specific characteristics. In short, there is (1) no evidence that the embryos of mammals and birds have true incipient gill-structures; (2) it is probable that the structures interpreted as such really subserve from the very beginning quite different functions, perhaps only of a temporary nature.

In general it may be said that the biogenetic law of development is as yet scarcely more than a petio principi. Because (1) the agreement between ontogeny and phylogeny has not been proved in a single instance; on the contrary—e. g., the famous pedigree of the horse's foot begins ontogenetically with a single digit; (2) the ontogenetic similarity which may be observed, for instance, in the larval stages of insects may be explained by the similarity of the environment; (3) the ontogenetic stages of organisms are throughout specifically dissimilar, as is proved by a careful concrete comparison. The same conclusion is indicated.
6. There is very little known to the causes of evolution. The greatest difficulty is in explaining the origin and constancy of "new" characters and the selection process. Darwin's "natural selection" is a negative factor only. The moulding influence of the environment cannot be doubted; but at present we are unable to ascertain how far that influence may extend.

Lamarck's "inheritance of acquired characters" is not yet exactly proved, nor is it evident that really new forms can arise by "mutation." In our opinion the principal of "Mendelian segregation," together with Darwin's natural selection and the moulding influence of the environment, will probably be some of the chief constituents of future evolutionary theories.

Many works referring to the subject have been mentioned in the body of the article. While it is true that most of them are of more recent date and will be of special value for further study.

VII. THE BIOGEOGRAPHICAL ARGUMENT.—The biogeographical argument is a very complex one, composed of a vast number of single facts whose correlation among one another, and whose bearing upon the problem of evolution, can hardly be determined before many years of detailed research have gone by. The theories established, for instance, by Wallace are certainly not sufficiently supported by facts. On the contrary, they have serious defects. One of the well-known "Wallace line"; another, much more important, the unfounded assertion that the higher vertebrates must have originated from marsupials and monotremes because these animals are almost entirely extinct in all countries except in Australia, wherever they are the highest representants of the Australian vertebrats, in greatly varying forms till to-day. Besides, in most cases we have no sufficient knowledge of the geographical distribution of organisms and of its various causes. But in order to give the reader an idea of the argument, we shall briefly refer to a group of facts which is well advanced, and the new discoveries explained in the preceding pages.

Volcanic islands and small continents are separated from the continent by a sea or strait of great depth exhibit a fauna and flora which have certainly come from the neighbouring continents, but which at the same time possess features altogether peculiar to them. The flora of Socotra, in the Indian Ocean, for instance, consists of endemic species; among these there are 200 endemic species. Similarly, on Madagascar there are 3000 endemic plant-species among 4100; on the Hawaiian Islands, 70 endemic species of birds among 116; on the Galapagos, 84 among 108. Many such facts are known. They certainly form an excellent demonstration in favour of the proposition defended throughout this article: that such forms as the endemic species, which may well be compared with the races of the human species, were not directly created, but arose by some process of modification which was greatly facilitated by their complete isolation.

The most important General Conclusions to be noted are as follows:

1. The idea that natural life is unknown to science.
2. The origin of the main organic types and their principal subdivisions are likewise unknown to science.
3. There is no evidence in favour of an ascending evolution of organic forms.
4. There is no trace of even a merely probable argument in favour of the animal origin of man.
5. The earliest human fossils and the most ancient traces of culture refer to a true Homo sapiens as we know him to-day.
6. Most of the so-called systematic species and genera were certainly not created as such, but originated by a process of either gradual or saltatory evolution. Changes which extend beyond the range of variation observed in the human species have thus far not been strictly demonstrated, either experimentally or historically.
bishop, Quintianus, was present at the Council of Elvira early in the fourth century. There exists no complete list of his successors for the next two centuries, though some are known from ancient diplomas. In 584 the Visigothic king, Leovigild, incorporated with his state the Kingdom of the Suevi, to which Evora had hitherto belonged. From the sixth and seventh centuries there remain a few Christian inscriptions pertaining to Evora. In one of them has been interpolated the name of a Bishop Julian (1 Dec., 596); he is, however, inadmissible. Thencefore the episcopal list is known from the reign of Reece (556) to the Arab invasion (714), after which the succession is quite unknown for four centuries and a half, with the exception of the episcopate of a Bishop Daniel (January, 1100). Until the reconquest (1166) by Alfonso I of Portugal, Evora was suffragan to Merida. Under this king it became suffragan to Braga, despite the protests of the Archbishops of Compostella, administrators of Merida. In 1274, however, the latter succeeded in bringing Evora within their jurisdiction. Finally, it became suffragan to Lisbon from 1394 to 1544, when it was made an archiepiscopal. Its large and splendid cathedral has undergone many architectural changes. Among its illustrious prelates may be mentioned Enrique (1540-64, 1578-80), the founder of its university and King of Portugal (1578-80); Teotonio de Braganza (1570-1602); and the scholarly writers Alfonso de Portugal (1486-1522) and Father Manuel de Ceneculo Villasboas (1802-11). Portuguese writers have maintained that the first bishop of Evora was St. Martins, a Roman, and a disciple of Jesus Christ, sent by the Apostles to Spain as a missionary of the Gospel; from his genuine acts it appears that he was a devout Christian, put to death by the Jews after the fourth century. Spanish Jews, it is known, are mentioned in the fourth-century Council of Elvira (can. 49).

**EVREUX, DIocese OF (ERROICENSIS), in the Department of Eure, France; suffragan of the Archbishopric of Rouen. A legend purporting to date from a certain Deodatus, who is said to have been converted and then later ordained by St. Taurinus, makes the latter first Bishop of Evreux. According to this legend St. Taurinus was baptized at Rome by St. Clement and sent south as a companion to St. Denis. According to Mgr. Duchesne the latter is known in the ninth century, when Abbot Hilduin of Saint-Denis was intent on proving the identity of Dionysius the Areopagite with Dionysius (Denis), first Bishop of Paris. It is certain that in the time of Charles the Bald (ninth century) St. Taurinus was held in high esteem at Evreux; still earlier, Bishop Landulphus, who seems to have occupied the See of Evreux at the beginning of the seventh century, had built the basilica in his honour. It is also impossible to fix the date of the reign of St. Gaud, who died a hermit at St. Pair, in the Cotentin. The first historically known Bishop of Evreux is Maurusio, who was present at the Council of Orleans in 1064. Other bishops of Evreux are: St. Landulphus, St. Eternus, and St. Aquilinus (seventh century); Gilbert (1071-1112), sent by William the Conqueror to Alexander II, who preached the funeral oration over the Conqueror; Gilles de Perche (1170-79), sent by Henry II of England as ambassador to Rome; Jean (1181-92), a friend of Henry II, who in Cyprus (1190) crowned Beccangaria Queen of England; Guillaume de Contier (1400-18), an active member of the Council of Constance; Jean de la Balue (1465-67), who later became a prisoner of Louis XI; Claude de Saintes, the Apologist (1575-91); Du Perron (1593-1606), a great factor in the abjuration of Henry IV. Thomas Lindet (1743-1823), a member of the Convention, was appointed constitutional Bishop of Evreux from March, 1791, to November, 1792. The following saints are venerated in the diocese: St. Maximus and St. Venerandus, martyrs, at Augeogny on the Eure; St. Lefroy (Leufredus), founder of the Benedictine monastery at La-Croix Saint-Ouen (Audoenius), who died 21 June, 738, and his brother St. Aifroy (Aguoreus), who succeeded him.

The cathedral of Evreux is one of the oldest in France; its octagonal dome was built at Cardinal Balue's expense; the church of Gisors has fine sculptural groups among them a statue by Jean Gonjon. There are pilgrimages to the shrine of Notre-Dame de la Courte at Bernay (since the tenth century); to that of Notre-Dame des Ares at Pont de l'Arche; and to a relic of St. Clotilda venerated at Andelys. Previous to the anti-Congregations law of 1901, there were Jesuits and Lazarists at Evreux. Communities of nuns devoted to teaching and the relief of the poor were: the Dominicans of St. Catherine of Siena, an institute founded in 1878 at Étrépagy, which has three houses in the English West Indies; and especially the Sisters of Providence of Evreux, an order founded in 1700 by Justine Dudivier and her brother Father Dudivier in a small hamlet called Caer. It was organized by Father James, an Eudist missionary, and re-established in 1804 by Charlotte Le Mesle; it had several houses in the diocese. The charitable institutions in charge of religious orders were in 1900: 2 crèches, 10 day-nurseries, 1 orphan asylum for boys, 12 for girls, 3 workrooms, 19 homes for the aged, 11 dispensaries, 2 houses of retreat, and 1 insane asylum. The Diocese of Evreux comprised in 1905 (close of the Concordat period) 334,781 inhabitants, 37 parishes, 545 succursal parishes (mission churches), and 25 vicariates paid by the State.

**Galicia Christiana (Novo),** (1759), XI, 564, 625; **instrumenta,** 123, 152; **CHASSANT AND SAUVAGE, Histoire des évêques d'Evreux.**
Ewald (or Hewald), Saints, Martyrs in Old Saxony about 695. They were two priests and natives of Northumbria, England. Both bore the same name, but were distinguished as Ewald the Black and Ewald the Fair, from the difference in the colour of their hair and complexions. According to the example of many at that time, they spent several years as students in the schools of Ireland. Ewald the Black was the more learned of the two, but both were equally renowned for holiness of life. They were apparently acquainted with St. Willibrord, the Apostle of Friesland, and were animated with his zeal for the conversion of the Germans. Indeed, by some they have been actually numbered among the eleven companions of that saint, but it is more probable they did not set out from England till after St. Willibrord's departure. They entered upon their mission about 690. The scene of their labours was the country of the ancient Saxons, now part of England and part of Germany, the Black and Ewald, Münster, Osnabrück, and Paderborn. At first the Ewalds took up their abode in the house of the steward of a certain Saxan earl or caldorman (satrapa). Bede remarks that "the old Saxons have no king, but they are governed by several caldormen (satrapas) who during war cast lots for leadership, but who in time of peace are equal in power" (Hist. Ecl., V, 10). The story of the Ewalds' visit to these peoples for two or three days, and promised to conduct them to the chieftain, as they affirmed they had a message of considerable importance to deliver to him.

Meanwhile, the Ewalds omitted nothing of their religious exercises. They prayed often, recited the canonical hours, and celebrated Mass, for they carried with them the holy vessels for the celebration of the Eucharist. The pagan Saxons, understanding from these things that they had Christian priests and missionaries in their midst, began to suspect that their aim was to convert their overlord, and thus destroy their temples and their religion. Inflamed with jealousy and anger, they resolved that the Ewalds should die. Ewald the Black, taking off his sword, but Ewald the Black they suspected, because he was the spokesman and showed greater boldness. He was torn limb from limb, after which the two bodies were cast into the Rhine. This is understood to have happened on 3 October at a place called Aplerbeck, where a chapel still stands.

When the caldorman heard of what had been done he was exceedingly angry, and took vengeance by ordering the murderers to be put to death and their village to be destroyed by fire. Meanwhile the martyred bodies were miraculously carried against the stream up the Rhine, for the space of forty miles, to the place in which the companions of the Ewalds were residing. As they floated along, a heavenly light, like a column of fire, was seen to shine above them. Even the murderers are said to have witnessed the miraculous brightness. Moreover, one of the martyrs appeared in vision to the monk Tilmon (a companion of the Ewalds), and told him where the bodies would be found: "that the spot would be there where he should see a pillar of light reaching from earth to heaven". Tilmon arose and found the bodies, and interred them with the honours due to martyrs. From that time onwards, the memory of the Ewalds was annually celebrated in those parts. A spring of water is said to have gushed forth in the place of the martyrdom.

Pepin, Duke of Austrasia, having heard of the wonders that had occurred, caused the bodies to be translated to Cologne, where they were solemnly enshrined in the collegiate church of St. Cunibert. The heads of the martyrs were bestowed on Frederick, Bishop of Münster, by Archbishop Anno of Cologne, at the opening of the shrine in 1074. These relics were probably destroyed by the Anabaptists in 1534. When St. Norbert visited Cologne, in 1121, he obtained two small vessels containing the relics of several saints, and among them were bones of the sainted Ewalds. These were deposited either at Prémontré, or at Florence, a Premonstratensian monastery in the province of Tuscany, as a memorial of the foundation of the Order in Westphalia, and are mentioned in the Roman Martyrology on 3 October. Their feast is celebrated in the dioceses of Cologne and Münster.

Columbia Emmons.

Ewing, Thomas, jurist and statesman, b. in West Liberty, Virginia (now West Virginia), U. S. A., 28 December, 1789; d. at Lancaster, Ohio, 26 October, 1871. His father, George Ewing of New Jersey, who had served as an officer in the Continental Army after the Revolution, settled in the Northwest Territory, in the Muskingum valley, and in 1796 was appointed as a surveyor in Athens Township, Athens County, Ohio. Here, amid the privations of pioneer life, Ewing was taught to read by his elder sister, Sarah, and by extraordinary efforts acquired a fair elementary education. At the age of nineteen he left home and worked in the Kanawha salt establishments, pursuing his studies at night by the light of the furnace. He was then an able lawyer, and had earned sufficient to enable him to enter the Ohio University at Athens, where, in 1815, he received the degree of A.B., the first degree conferred by any college in the western country. Ewing then studied law at Lancaster, Ohio, and was admitted to the bar in 1816. He entered into a partnership with his preceptor, in the firm of Beecher & Ewing, and then, after Mr. Beacher's death, with his own son Philalemon, in the firm of Ewing & Son. He achieved high prominence as a lawyer and won notable success at the state and national bar.

In March, 1831, Ewing entered public life as a member from Ohio of the United States Senate, and became prominent therein, with Webster and Clay, in the resistance of the acts of President Jackson. At the same period of Whig measures. He upheld the protective tariff system of Clay, and presented one of the first of the memorials for the abolition of slavery.

In March, 1837, on the expiration of his term, he resumed the practice of the law. Upon the election of President Harrison, he was appointed Secretary of the Treasury in March, 1841. He prepared the second call for the re-charter of the Bank of the United States, and, on its veto by Tyler, he resigned from the cabinet, in September, 1841. In March, 1849, he was appointed by President Taylor secretary of the then recently created Department of the Interior. He organized the department, and in his report to congress urged the construction of a railroad to the Pacific. In May, 1851, President Taylor in his cabinet and was appointed senator from Ohio to fill an unexpired term. On the expiration of his term in March, 1851, he returned to the practice of the law. In 1860 Ewing was appointed by the Governor of Ohio a member of the famous Peace Conference, and he was prominent in the efforts to avert the secession of the Southern States. During the war he unreservedly supported the government, and his judgment on matters of state was frequently sought by Mr. Lincoln. When the capture of Mason and Shidell brought England and the United States to the verge of hostilities, Ewing sent Mr. Lincoln the famous telegram that was decisive of the whole trouble: "There can be no contradiction of war between neutral points. It was his advice that finally prevailed and secured the freeing of
the envos and the avering of hostilities. Conserva-
tive in his opinions, Ewing opposed the radical mea-
ures of Reconstruction at the close of the war and sup-
ported the administration of President Johnson. In
February, 1868, after the removal of Stanton, the
President sent to the Senate the nomination of Ewing as
Secretary of War, but it was not confirmed.

Descended of Scottish Presbyterian stock, Ewing,
after a lifelong attraction to the Catholic Church, en-
tered it in his latter years. Reared outside the fold of
any religious body, he married, 7 January, 1820,
Mary Rebecca Gillespie, daughter of Hugh Boyle, an Irish
Catholic. He was deeply religious, both in regard to
faith and pious example of his wife during their long
married life, and all his children were reared in the
Faith. In October, 1869, Ewing was stricken while
arguing a cause before the Supreme Court of the
United States and he was baptized in the court room.

In September, 1871, his lifelong friend, Archbishop
Purcell of Cincinnati, received him into the Church.

Philemon Beecher, eldest son of Thomas, b. at
Lancaster, 3 November, 1820; d. there 15 April, 1890.
He graduated in 1848 from Miami University, Oxford,
Ohio, and then entered upon the study of the law.
Admitted to the Bar in 1841, he formed with his
father the firm of T. Ewing & Son. In both State and
Federal courts, through his grasp of the philosophy of
their respective bodies of law, he maintained a place
beside his illustrious father. He was also the main
support of his father in his political life and labours,
and was an active figure first in the Whig and then in
the Republican party. In 1862 he was appointed
Judge of the Court of Common Pleas. Being opposed
to the Reconstruction measures of his party he took
part in the Liberal Republican movement. He was
nominated to the supreme bench of Ohio in 1873.
During the sixties and seventies he engaged in the
banking business, and was prominent in the develop-
ment of the Hocking Valley coal-fields. The later
years of his life were spent in retirement.

He married at Lancaster 31 August, 1848, Mary
Rebecca Gillespie, a sister of Eliza Maria Gillespie
(Mother Mary of St. Angela of the Sisters of the Holy
Cross of Notre Dame, Indiana). He was a man of
wide culture and a writer of vigorous and limpid Eng-
lish. He was ever foremost where the interests of the
Church were concerned, and was a delegate from the
Diocese of Columbus to the Catholic Congresses of
1880 and 1883.

James, third son of Thomas, b. at Lancaster,
31 October, 1826; d. there 30 June, 1905. He was
educated at the United States Military Academy at
West Point, and in 1849 went to California, returning
to Lancaster, in 1852, to enter on the study of the law.
On his admission to the Bar, he practised in St. Louis,
Missouri, from 1854 to 1856, and then, in partnership
with his brother Thomas, at Leavenworth, Kansas,
from 1856 to 1858. In April, 1861, he was appointed
brigade-inspector of Ohio Volunteers with the rank of
major, and in August, 1861, was commissioned colonel,
commanding the Thirtieth Ohio Volunteer Infantry,
and rendered conspicuous service. In November,
1862, he was commissioned brigadier-general. He
took part in the operations against Vicksburg, and his
command led in the assault of 22 May, 1863. In
July following, he was made inspector of the
Fourth Division, Fifteenth Army Corps. In the op-
érations about Chattanooga he led his division in the
assault upon Missionary Ridge and its capture.
In the latter part of the war he was placed in command
of the district of Kentucky, and at its close was bre-
vetted major-general. In 1880 President Johnson ap-
pointed him to the Circuit Court of the District of
Columbia, which he filled until 1870. On his return to the United States, he bought a small estate near Lancaster, in 1876, on
which he lived until his death. He was married at
Washington, D. C., 3 August, 1858, to Henrietta Eliza-
beth Young. He was a man of wide culture, and an
interesting writer. He published several stories,
among them "The Grand Ladron, a tale of Early
California", "Koche, a King of Pit", "A Castle in the
Air", and "The Black List".

Charles, fifth child of Thomas, b. at Lancaster, 6
March, 1835; d. at Washington, 20 June, 1883.
Commencing his studies at the college of the Domin-
ican Fathers in Perry County, Ohio, he later attended
Gonzaga College, Washington, and the University of Vir-
ginia. In 1800 he began the practice of law in St.
Louis, Missouri. The Civil War breaking out soon
afterwards, he enlisted in the Thirteenth Infantry of the
United States Regulars in May, 1861, and in the Spring of 1862, joined his
brother-in-law, General William T. Sherman, in the
Arkansas and Mississippi campaigns. In the siege of
Vicksburg he was three wounded. On the 22nd of
June, 1862, he was commissioned lieutenant-colonel
and assistant inspector-general of volunteers, and on
the 15th of June, 1863, inspector-general of the Fif-
teenth Army Corps. He served with much distinc-
tion in the Atlanta campaign and the famous march
through Georgia. On the 5th of March, 1865, he was
commissioned brigadier-general, and on the mustering
out of the volunteers was transferred to the regular
force, from which he resigned as brevet-colonel on the
20th of October, 1866. He was called to the regular service for gallant and meritorious
services at the Vicksburg and Atlanta campaigns. After his
retirement from the Army, he took up his residence
in Washington and began the practice of law, in which
profession he obtained considerable prominence. In
1873 he accepted the appointment of Indian Commissi-
sioner, and laboured energetically to restore to the
Catholic Indian Missions the schools among the
Indians which they had maintained for twenty years.
Pope Pius IX, 3 May, 1877, created him a Knight of the
Order of St. Gregory the Great. General Ewing
married Virginia, daughter of John K. Miller of Mt.
Vernon, Ohio.

Eleanor Boyle (Mrs. William Tecumseh Sher-
man), daughter of Thomas, b. at Lancaster, 4 October,
1824; d. in New York City, 28 November, 1888. She
was educated at the Visitation Convent at George-
town, D. C. In 1829, just after his father's death, William Tecumseh Sherman, the subsequent famous
General of the United States army, then a boy of nine
years, was adopted by Mr. Ewing, reared in his house-
hold, and appointed to the Military Academy. Sherman married the daughter of a benefactor, 1 May, 1850. She was devoted throughout her
life, after the duties of her household, to the relief
of suffering and of want, and to the advancement of
the Church. Mentally, she inherited the brilliant intel-
lectual powers of her father and was a true helpmate
of her husband in his distinguished career. She was
the author of "Thomas Ewing, a Memorial", pub-
lished in 1872. Father P. J. De Smet, S. J., the
missionary among the Indians, was an old and intimate
friend of the Shermans, and through this intimacy
Mrs. Sherman was led to take a special interest in the
cause of the Catholic Indians. Her influence and
great personal exertions were of much assistance at
Washington, to her brother, General Charles Ewing,
in urging the cause of the Catholic Indians, and in
promoting the missions for the Catholic Indians.

Years (Notre Dame, 1906); Encyclopaedia, Am. Roj, s. v.
JOHN G. EWING.

Examination, a process prescribed or assigned for
testing qualification; an investigation, inquiry. Ex-
aminations are in use in parochial schools, Catholic
academies, seminaries, and universities as tests of
proficiency. Examinations or something equivalent
must enter into all effectual instruction, for it is not sufficient that a book be placed in the hands of a pupil or that he be compelled to attend lectures, but it is necessary to see that he grasps the ideas conveyed. Such tests are widely in vogue in Catholic institutions, as they are in those not subject to the Church. Examinations, however, have other purposes, especially as tests of qualifications for offices or positions, and as investigations to arrive at the truth. It is particularly under these aspects that the question of examinations now presents itself.

Examination for Appointment to Parochial Benefices.—The Council of Trent, realizing that parishes should be ruled over by men of virtue and learning decreed (Sess. XXIV, c. xviii, De ref.) that the cure of souls should be entrusted only to those who, in a competitive examination or concursus, have demonstrated their fitness. The purpose of this examination is not only to exclude unworthy candidates, but to secure the selection of the best. Clement XI and Benedict XIV determined the form of this examination (see CONCURSUS; EXAMINERS, SYNODEAL).

Examination for Promotion to Orders.—The Council of Trent (Sess. XXIII, c. vii, De ref.), repeating the legislation of previous councils, prescribes that a bishop promote no one to orders in the Church till priests and others prudent and learned, appointed by the bishop and chosen from among the candidates, have investigated the candidate. This investigation is concerned with legitimate birth, baptism, confirmation, freedom from irregularity, age, title of ordination, morals, faith, and knowledge. In practice, however, the examination is confined to learning, as other requisites are investigated in advance and attested by proper documents, of the chancellor, parish, rector of seminary, etc. The place, form of questions, number of examiners, and other details of the examination are left to the bishop. A prelate commissioned by another to ordain the latter's subject is free to submit the candidate to an examination or not, as he may deem proper, unless, for grave reasons, he suspect the unfitness of the candidate, notwithstanding a previous examination, or unless he be commissioned by the candidate's bishop to hold the examination. Members of religious orders are examined by their own superiors and likewise by the ordinary prelate, except the Jesuits and some others who by special privilege are exempt from examination by the ordinary prelate (see EXAMINERS, APOSTOLIC).

Examination of Bishops-Elect.—In addition to the examination required by the Council of Trent, Gregory XIV prescribed another for bishops-elect, while Clement VIII instituted a congregation of cardinals for this purpose. This examination, however, developed into little else than a ceremony, since bishops are not selected till assurance is given of their prudence, piety, and learning. The late reorganization of the Roman Curia puts this matter under the Consistorial Congregation. Cardinals who are to receive episcopal consecration are exempt from this examination.

Examination of Confessors.—The Council of Trent (Sess. XXIII, c. xv, De ref.) established the necessary requirements of episcopal approbation for all priests, both secular and regular, to hear confessions, advising an examination as a test of fitness, though bishops are free to accept such priests whose qualifications are required for the work. Members of the regular clergy, without exception, may be obliged by the ordinary of the diocese to undergo this test, if they would hear the sacramental confessions of secular persons. Once approved, however, they are not to be subjected to another examination, unless some grave cause relating to confessions arise (see EXAMINERS, APOSTOLIC).

Examination of Preachers.—The ordinary of a diocese may submit to an examination members of religious bodies who desire to preach in the diocese in churches other than those of their own order. Once, however, he has given his approbation, he may not insist on a second examination, though for just cause he may withdraw the permission given to preach. The bishop's successor in office may demand a re-examination.

Examination of Those Wishing to Contract Marriage.—Before publishing the bans of marriage the pastor questions separately the contracting parties regarding their place of residence, to ascertain whether he has a right to unite them in matrimony. He inquires, likewise, whether they are acting with perfect freedom, or perhaps under duress, fear, or other motive which invalidates these vows. This is also true of any opposition on the part of parents to the proposed union, as well as of the possible existence of any matrimonial impediment. He must ascertain, moreover, whether the parties are sufficiently grounded in the rudiments of the Catholic religion and capable, consequently, of instructing their offspring. If the parties belong to different orders, by whom is this investigation to be conducted? Local regulations and customs are to be observed, since there is neither positive universal legislation nor uniform practice in this matter.

Examination of Witnesses.—In ecclesiastical, as in civil, courts witnesses are examined under oath, administered by the auditor or judge, who should first call the witness's attention to the nature and binding character of the examination and warn him not to obstruct in any way his investigations. The oath must be to the effect that the witness will tell the truth, the whole truth, and nothing but the truth. If thought advisable by the judge, the oath may also contain the promise of secrecy. A statement not sworn to does not constitute evidence. Witnesses are examined separately. In civil trials the interested parties have a right to be present when witnesses are deposing and may not be excluded except in rare cases approved by the judge. In criminal or other cases, where public rather than private interest is at stake, the practice is to exclude the plaintiff and defendant, as well as other witnesses. Here, also, in extreme cases an exception may be made. If, however, the defendant is not allowed to confront the witnesses examined, the plaintiff and vice versa, he is permitted to see the witnesses take the oath and may suggest interrogatories to be proposed.

Witnesses are to be asked or cited, but not necessarily in a formal manner, to appear in court and testify. He who offers his testimony unsolicited is suspected. The examination of witnesses is conducted by the judge, under whose direction the process is usually special; because it should be clear and capable of a direct and definite answer. The general questions concern the name, residence, profession, age, and religion of the witness. His relations to plaintiff or defendant, his habits, prejudices, associations, motives, his physical defects, and, at times, his mental qualities, his means of knowledge, powers of discernment, and his memory may be relevant. The special queries are drawn from the crime or charge, and should be relevant or material to the fact at issue. The judge must ascertain how much of the deposition is of personal knowledge, or only hearsay evidence or rumour, or perhaps mere opinion or inference. Circumstances of place, persons, time, etc. may be pertinent. Leading or suggestive questions, which the judge may use, are not permitted. The rules of competency of witnesses are reducible to two, a knowledge of the facts in the case and veracity. In weighing the evidence, however, the judge must consider not only the knowledge and credibility of the witness, but also the quality of the deposition and its weight in comparison with that of other witnesses. While exception may be taken to a witness, if unsound it is of course excluded. The testimony is written down by the secretary or clerk and is read by him to the witness. Additions or corrections, if necessary, are made. The witness affixes his signature, or, if unable to write, he makes his mark,
which must be attested by the clerk. If the witness refuses to subscribe, the fact and the reason thereof must be noted. Finally, both the judge and the clerk sign the document.

ANDREW B. MEHAN.

Examination of Conscience.—By this term is understood a review of one's past thoughts, words, and actions for the purpose of ascertaining their conformity with, or dissimilarity from, the moral law. Directly, this examination is concerned only with the will, that is, with the good or bad intention that inspires one's thoughts, words, and actions. Some of the ancient philosophers—the Stoics in particular—studied to be blameless in their own sight, and for this they made frequent use of self-inspection. They professed the doctrine that the happiness and dignity of man consist in virtue, or conformity with the law of reason, or with conscience; and thus examinations of conscience were a regular practice in the schools of the Stoics and of their later followers, such as Eclectics as Quintus Sextius and Seneca. In the hearts of all men there is heard at times the voice of conscience bidding them seek their moral perfection, not so much for the dignity and honor that we read in reference to the holiness of the Supreme Author of the moral law. This precept of rational nature has been enforced by the voice of revelation. Thus God said to Abraham, "Walk before me, and be perfect" (Gen., xvii, 1). To this precept the Prophet Jeremias referred when he sang in his Lamentations: "Let us search our ways, and seek, and return to the Lord" (ll. 40-42).

In the fullness of time Christ came to perfect the knowledge of the moral law and draw the human heart into closer union with God. Frequent examination of conscience then became more imperative than before. In particular it was commanded by the Apostle St. Paul to be performed by the faithful each time they received Holy Communion very frequently, examination of conscience became a familiar accomplishment of their spirit. Thus we read in the great hermit St. Anthony, that he examined his conscience every night, while St. Basil, St. Augustine, and St. Bernard, and founders of religious orders generally, made the examination of conscience a regular daily exercise of their followers. What was thus enjoined on religious by rule was inculcated upon the faithful at large by the masters of the spiritual life as a most effectual means to advance in virtue.

The devotional examination of conscience is quite distinct from that required as a proximate preparation for sacramental confession. If a Christian judges himself unworthy of receiving the Body of the Lord, he is to make himself worthy by obtaining pardon of his sins; and the means is provided for the purpose by Christ in the power He has given His ministers to remit sins. As discretion is to be used in remitting or retaining sins, the confession of the sinner is necessary; and to confess his faults he must examine his conscience with proper diligence. By self-examination he intensifies his contrition and purpose of amendment. In preparing for confession, the penitent is strictly obliged to examine his conscience with such diligence as a prudent man would do in any important business, but the impossible is not demanded. The more protracted his wanderings have been, the weaker the prodigal may have become to travel back to his Father, and the more help he may need to accomplish the task. When he has made some earnest efforts in this matter, the priest is to lend his assistance to perfect the work; as Vasquez and de Lugo remark, a prudent confessor can accomplish more with the last efforts of the penitent than with the efforts of the confessor himself. The examination is a most important branch of the examination of conscience. Suarez takes notice that the Fathers of the Church have not taught any set system for such examinations. The ordinary method followed in the examination for confession is to consider in succession the Ten Commandments of God, the Commandments of the Church, the Seven Capital Sins; and then one states one of the methods of partaking in the sins of others. For persons who have led a uniform life it will often suffice to recall where they have been, the persons with whom they have dealt, the duties or pursuits in which they have been engaged; how they have behaved on ordinary occasions—as, for instance, when busied in their usual employment on working-days—and on unusual occasions, such as Sundays and holy-days.

As to the daily examination of conscience, two species must be distinguished, the general and the particular. The former aims at the correction of all kinds of faults, the latter at the avoidance of some particular fault or the acquisition of some particular virtue. For the general examination a good method is laid down by Ignatius of Loyola in his "Spiritual Exercises." It contains five points. In the first point we thank God for the benefits received; in the second we ask grace to know and correct our faults; in the third we pass in review the successive hours of the day, noting what faults we have committed in deed, word, thought, or omission; in the fourth we ask God's pardon; in the fifth we purpose amendment.

Of the particular examination of conscience St. Ignatius is generally considered as the author, or at least as the first who reduced it to system and promoted its practice among the faithful. It concentrates one's attention on some one fault or virtue. On rising in the morning we resolve to avoid a certain fault during the day, or to perform certain acts of a certain virtue. We again, in the evening, reconsider how often we have committed that fault, or practised that virtue; we mark the number in a booklet prepared for the purpose, and we renew our resolution for the rest of the day. At night we examine and mark again, and make resolutions for the following day. We thus act like careful business men who watch for a while a special portion of their mercantile transactions to see where losses come in or where greater gain may be secured. St. Ignatius further suggests that we impose upon ourselves some penance for every one of the faults committed, and that we compare the numbers marked each time with those of the preceding day, the total sum at the end of the week with that of the preceding week, etc. (See Conscience; Duty; Sin.

CHARLES COPPENS.

Examiners, Apostolic, so called because appointed by the Apostolic See for service in Rome. In 1570 Pius V instituted the Apostolic examiners to conduct examinations of candidates for orders and of confessors. These examiners, who are chosen by the pope, take an oath in the presence of the cardinal vicar to discharge their duties faithfully. By virtue of a Constitution of Alexander VII, in 1662, the examination of those who would receive orders is held in the vicariate, or palace of the cardinal vicar, in the presence of at least three examiners. It is only after consultation with the pope that the cardinal vicar may dispense
from this examination, except in case of tonsure, when he may allow candidates to be examined privately by one examiner. All, whether affiliated to the Diocese of Rome or not, must undergo this examination. Those who have been in Rome four months or more, and who intend to return to the Eternal City, must, under pain of suspension, be examined in the vicariate before receiving orders (not tonsure) elsewhere. An exception is made in regard to the canons of the basilica of St. Peter, who are examined and promoted to orders by their cardinal archpriest. They must, however, have taken the oath from the cardinal vicar. Even prelates of the Roman Curia may present themselves at the vicariate, but only in respect for their dignity they occupy seats among the examiners and examine one another.

As regards confessors they are not approved in Rome till they have passed a satisfactory examination before the Apostolic examiners. Although the cardinal vicar may dispense in this matter, the exercise of this prerogative is exceedingly rare. Generally, after a first and second test faculties to hear confessions are granted only for a limited time, while a third successful examination meets with unlimited approbation.

Andrew B. Meehan.

Examiners, synodal, so called because chosen in a diocesan synod. The Council of Trent prescribes at least six synodal examiners. The number twenty has been fixed upon by the Congregation of the Council as an ample sufficiency. The chief purpose of synodal examiners is to conduct competitive examinations or concourses, though they may be designated to hold other examinations. Suitable candidates for this office are proposed singly, not all together, each year in the diocesan synod, by the bishop or his vicar-general; they must be satisfactory to the synod and meet the approval of a majority of those present, the voting being secret or public as the bishop may determine. They should have the academic degree at least of licentiate in theology or canon law, but where clerics with such degrees are not available, others qualified, either of the diocesan or religious clergy, are eligible. Synodal examiners, once appointed, hold office till the ensuing synod, though several years have elapsed. Those chosen take an oath—in the synod, if present, otherwise privately in the presence of the bishop or vicar-general—to fulfill their duties without prejudice, favoritism, or other unworthy motive. Neglect on the part of only one to take this oath renders null and void the concursus in which he takes part. They are admonished, moreover, not to accept presents in the discharge of their office, falling in which they become guilty of simony and are punishable accordingly. Neither the diocesan synod nor the bishop personally may establish a salary, however insignificant, for the fulfillment of their office.

If, within a year after their appointment in synod, the number of examiners, through death, resignation, or other cause, fall below six, the bishop may, with the consent of the cathedral chapter, fill up the number; if the number six decrease after the expiration of a year, permission of the Sacred Congregation of the Council is also required. Examiners at the synod of synod are termed pro-synodal. There is no positive legislation regarding the removal from office of examiners, synodal or pro-synodal. In some countries, where ecclesiastical benefices do not exist, the regulations of the Council of Trent and synodal examiners are not observed, kindred duties as far as necessary being performed by clergy who are styled "examiners of the clergy," or something similar. The Third Plenary Council of Baltimore prescribes for the United States that these examiners, at least six in number if possible, be selected in synod. It is only with permission of the Holy See and after consultation with the diocesan consultors that a bishop may choose them out of synod. In case of vacancy the bishop, with the advice of said consultors, may supply the deficiency. These examiners are required to take the oath as above and likewise to swear not to accept gifts on the occasion of examinations. Whether these examiners, thus appointed out of synod, hold office till death or only till the conving of the next synod is not determined. In many dioceses these same examiners conduct the examinations for the junior clergy, confessors, candidates for orders, and such like.

(Cf. Council of Trent, Sess. XXIV, c. xviii, De ref.; also Third Plenary Council of Baltimore, nos. 24 sqq.)

Andrew B. Meehan.

Exarch (Gr., Ἐκσαρχος, a title used in various senses both civilly and ecclesiastically. In the civil administration of the Roman Empire the exarch was the governor or viceroy of any large and important province. The best-known case is that of the Exarch of Italy, who, after the defeat of the Goths, ruled from Ravenna (532–751) in the name of the emperor at Constantinople. In ecclesiastical language an exarch was, at first, a metropolitan whose jurisdiction extended beyond his own (political) province, over other metropolitans. Thus, as late as the time of the Council of Florence (1438) the patriarch and metropolitan of Constantinople was called an exarch (c.et R.). When the name "patriarch" became the official one for the Bishops of Rome, Alexandria, Antioch (and later of Constantinople and Jerusalem), the other title was left as the proper style of the metropolitans who ruled over the three remaining (political) dioceses of Diocletian's division of the Eastern Province: Rome, Carthage (Apæphus), of Cappadocia and Pontus (Cesarea), and of Thrace (at Heraclia). The advance of Constantinople put an end to these exarchates, which fell back to the state of ordinary metropolitan sees (Fortesque, Orth. Eastern Church, 21–25). But the title of exarch was still occasionally used for any metropolitan (so at Sardica in 445, can. vi). Since the use of all these titles became gradually fixed with definite technical meanings, that of exarch has disappeared in the West, being replaced by the names "Apostolic vicar" and then "primate." A few cases, such as that of the Archbishop of Lyons, whom the Emperor Frederick I named Exarch of Burgundy in 1157, are rare exceptions. In Eastern Christendom an exarch is a bishop who holds, besides his own diocese, another without a metropolitan, and that of metropolitan authority. The principle is that, since no addition may be made to the sacred number of five patriarchs, any bishop who is independent of any one of these five should be called an exarch.

Thus, since the Church of Cyprus was declared autocephalous (at Ephesus in 431), its primate receives the title of Exarch of Cyprus. The short-lived medieval Churches of Ipeck (for Servia), Achrida (for Bulgaria), Tarnova (for Rumania), were governed by exarchs, though these prelates occasionally usurped the title of patriarch (Fortesque, Orth. Eastern Church, 305 sq., 317 sq., 328 sq.). On the same principle the Archbishop of Mount Sinai is an exarch, though in this case, as in that of Cyprus, modern Orthodox usage generally prefers the title to the usage of the Greeks (Ἄρης ἁγίας Ἐκσαρχος). When the Bulgarians constituted their national Church (1870), not quite daring to call its head a patriarch, they made him an exarch. The Bulgarian exarch, who resides at Constantinople, is the most famous of all persons who bear the title now. Because of its adherents throughout Macedonia are called exarchists (as opposed to the Greek patriarchists). It was an inaccurate use of this title when Peter the Great, after abolishing the Patriarchate of Moscow (1702), for twenty years before he founded the Russian Holy Directing Synod, appointed a vicegerent with the title of exarch as president of a tem-
porary governing commission. Since Russia destroyed the old independent Georgian Church (1802) the Primate of Georgia (always a Russian) sits in the Holy Synod at St. Petersburg with the title of Exarch of Georgia (Fortescue, Orth. Eastern Church 301-305). Lastly, the third officer of the court of the Patriarch of Constantinople, who examines marriage cases (our defensor matrimonii), is called the exarch (ibid., 349).

Jahrhunderts (Münster, 1901); Sieberwald-Schneider, Verfassung und gegenwärtiger Bestand namentlicher Kirchen des Orts (2nd ed., Munich, 1904); Katz- tebaum, "Gerechtigkeit und kirchliche juristische autonome Kirche" (Freiburg im Br., 1892), I, 51-59; Henschusch, "System des katholischen Kirchenrechts" (Freiburg im Br., 1890), I, 217; and with regard to the Orthodox Church in Russia see Lord Shelton, "The Orthodox Church in Russia" (London, 1831).

Exclusion, See Excommunication.

Ex. Catholic, literally "from the chair", a theological term which signifies authoritative teaching and is more particularly applied to the definitions given by the Roman pontiff. Originally the name of the seat occupied by a professor or a bishop, cathedra was used later on to denote the magisterium, or teaching authority. The phrase ex cathedra occurs in the writings of the medieval theologians, and more frequently in the discussions which arose after the Reformation in regard to the papal prerogatives. But its present meaning was formally determined by the Vatican Council, See IV, Const. de Ecclesia Christi, c. iv: "We teach and define that it is a dogma Divinely revealed that the Roman pontiff when he speaks ex cathedra, that is when in discharge of the office of pastor and doctor of all Christians, by virtue of his supreme Apostolic authority, he defines a doctrine regarding faith or morals to be held by the universal Church, by the Divine assistance, he can judge to be of doctrinal error, is possessed of that infallibility with which the Divine Redeemer willed that His Church should be endowed in defining doctrine regarding faith or morals, and that therefore such definitions of the Roman pontiff are of themselves and not from the consent of the Church irreformable." (See Infallibility; Pope.)

E. A. Pace.

Exclusion, Right of (Lat. Jus Exclusivae), the alleged competence of the more important Catholic countries, Austria, France, and Spain, to indicate to their respective ordinaries what names the Cardinals were to confide to make the members of the Sacred College who were persona minus grata, so that, if there was a possibility of one of these becoming pope, the authorized cardinal might, before the decisive ballot, give his veto, in the name of his government, against such election. At one time this veto was given orally; later it was given in writing. The cardinal protector, or cardinal procurator, who cast the veto, was, as a rule, that member of the Sacred College who had been created a cardinal at the desire of his government. This declaration could only be made at the last moment, for the reason that, by traditional usage, a government might invoke this alleged right only once at the same conclave, and consequently would not wish to employ it unnecessarily. A veto cast after the election was not recognized.

Opinions elicit widely as to the antiquity of this right. It cannot be proved that it is in any way related to the rights in the papal election, exercised by German kings and emperors in the early Middle Ages. Indeed, it was not until the sixteenth century, that the more important European countries obtained larger influence over papal elections, owing to the contentions of France, Spain, and Germany for the papal see over Italy. These governments were originally satisfied with the so-called "ballot of exclusion"; i.e., they sought to unite more than one-third of the voters against an undesirable candidate and thus make his election impossible, through lack of the necessary two-thirds majority. About the beginning of the seventeenth century, however, in the conclave that elected Leo XI and Paul V (1605), Spain raised the claim, that it could exclude a candidate by a general declaration addressed to the College of Cardinals. Soon after, in the conclaves of 1641 and 1655, which elected, respectively, Innocent X and Alexander VII, and in both of which Cardinal Sacchetto was excluded as a candidate, the term used for this action was Jus Exclusive (right of exclusion). This right was, therefore, claimed about the middle of the seventeenth century; e.g., 1691, and 1721, must be abandoned. It was also about the middle of the seventeenth century that treaties and polemic writings began to appear, in which the alleged right of exclusion was discussed; among such controversialists were the Cardinals Albizzi and Lugo.

In the following period repeated use was made of this so-called right. In 1721 the German emperor formally excluded Cardinal Paolucci; in 1730 the King of Spain excluded Cardinal Imperiali; in 1758 France exercised this right to exclude Cardinal Cavalcaselle. In the nineteenth century Austria maintained the right of exclusion, in 1830, against Cardinal Severoli, and Spain, in 1830, against Cardinal Giustiniani; in 1903 Austria again exercised this right, this time against Cardinal Rambelli. A majority of the council of the church has a right to exercise any veto in a papal election. On the contrary the popes have expressly repudiated the exercise of such right. Pius IV in the Bull "In eligendis", of 9 October, 1562 (Magnum Bularium, II, 97 sqq.), ordered the cardinals to elect a pope "Principium secundarium intercessionibus, ceterisque mundanis respectibus... minimae evertendi... (without any regard to the interference of secular rulers, or to other human considerations). That he meant thereby what is now known as the right of exclusion cannot, indeed, be proved; according to the foregoing account of its origin such claim did not then exist. Gregory XV, in the Bull "Eteri Patris Filius", of 15 November, 1621, in "Magnum Bularium", II, 111 sqq. (la), declared the cardinals of the last century to be "Cardinales omnibus abstinentibus, ab omnibus pactionibus, conventiohibus, promissionibus, intendentibus, condiciitis, fideibus, aliis quibusque obligationibus, minis, signis, contrasignis, surgentibus seu statuendi, aut aliis tam verbo quam scripto aut quodomodoque dantibus aut petentibus, tam respectu inclusionibus quam exclusionibus, tam undius perpetuus..." (without any regard to the interference of secular rulers or to other human considerations).

By this time, however, governmental exclusion had long been the accepted form of the interference of secular rulers (interessio principum) in papal elections. It is, therefore, precisely this exclusion which the pope forbids. This command has all the more weight since we know that this pope was urged to recognize, within certain limits, the right of exclusion put forth by the Catholic states; in the minutes of the deliberations of the commission of cardinals appointed to draw up this Bull the right of exclusion is explicitly characterized as an abuse. By the Constitution "In hac sublimi", of 23 August, 1671 (Archiv für kath. Kirchenrecht,
EXCOMMUNICATION

1981, L.XV, 303 sqq.), Pius IX forbade any interference of the secular power in papal elections. It is plain, therefore, that the popes have rejected all right of exclusion by a Catholic state in a papal election. Nor can it be admitted that this right has arisen through custom. None of the requisites essential to the growth of a custom of right are present; no comparable usage and prescription are especially lacking. To debar precisely the most capable candidates is an onerous limitation of the liberty of the electors, and injurious to the Church. Moreover, the cases of exclusion by Catholic states are too few to permit the inference of a right acquired by customary possession. Recent legislation by Pope Pius X has absolutely refused the admissibility of exclusion in any election. In the Constitution "Commissum Nobis" (20 Jan., 1904) he declared that the Apostolic See had never approved the civil veto, though previous legislation had not succeeded in preventing it: "Wherefore in virtue of holy obedience, under threat of the Divine judgment, and pain of excommunication inexcusable and prohibited every one and all, cardinals, members of the Sacred College of Cardinals, and all others who take part in the Conclave, to receive even under the form of a simple desire the office of proposing the veto in whatever manner, either by writing or by word of mouth .... And it is our will that this prohibition be extended .... to all intercessions, etc., whereby they can allow lay people to trade themselves in the election of a pontiff .... "Let no man infringe this our prohibition .... under pain of incurring the indignation of God Almighty and of his Apostles, Sts. Peter and Paul." The new form of oath to be taken by all cardinals contains these words: "we shall never in any way accept, under any pretense, from any civil power whatever, the withholding of the rights and powers vested in our order by the same form of a mere desire .... and we shall never lend favour to any intervention, or intercession, or any other method whatsoever, by which the lay powers of any grade or order may wish to interfere in the election of a pontiff."

JOHANNES BAPTIST SAGMÜLLER.

Excommunication.—This subject will be treated under the following heads: I. General Notions and Historical Summary; II. Kinds of Excommunication; III. Who Can Excommunicate? IV. Who Can Be Excommunicated? V. Effects of Excommunication; VI. Absolution from Excommunication; VII. Excommunications Later Sententia Now in Force. Excommunications Later Sententia Now in Force.

I. General Notions and Historical Summary.— Excommunication (L. excommunicatio) is the exclusion from Christian society. Being a penalty, it supposes guilt; and being the most serious penalty that the Church can inflict, it naturally supposes a very grave offence. It is also a medicinal rather than a vindictive penalty, being intended, not so much to punish the culprit, as to correct him and bring him back to the path of righteousness. It necessarily, therefore, contemplates the future, either to prevent the recurrence of certain culpable acts that have grievous external consequences, or, more especially, to induce the delinquent to satisfy the obligations incurred by his offence. Its object and its effect are loss of communion, i. e. of the spiritual benefits shared by all the members of Christian society; hence, it can affect only those who by baptism have been admitted to that society. Undoubtedly there can and do exist other penal measures which entail the loss of certain fixed rights; among them are other censures, e. g. suspension for clerics, interdict for clerics and laity, irregu- larity in marriage, etc. It is obvious that these are clearly distinguished from these penalties in that it is the privity of all rights resulting from the social status of the Christian as such. The excommunicated person, it is true, does not cease to be a Christian, since his baptism can never be effaced; he can, however, be considered as an exile from Christian society and as non-existent, for a time at least, in the sight of ecclesiastical justice. But such a condition does not necessarily end (and the Church desires it), as soon as the offender has given suitable satisfaction. Meanwhile, his status before the Church is that of a stranger. He may not participate in public worship nor receive the Body of Christ or any of the sacraments. Moreover, if he be a cleric, he is forbidden to administer a sacred rite or to exercise in any way his ecclesiastical functions.

Right of the Church to Excommunicate.—The right to excommunicate is an immediate and necessary consequence of the fact that the Church is a society. Every society has the right to exclude and deprive of their rights and social advantages its unworthy or grievously culpable members, either temporarily or permanently. This right is necessary to the safety in life of the society which is thereby assured.

The fundamental proof, therefore, of the Church's right to excommunicate is based on her status as a spiritual society, whose members, governed by legitimate authority, seek one and the same end through suitable means. Members who, by their obstinate disobedience, reject the means of attaining this common end, are excluded from the society. This rational argument is confirmed by texts of the New Testament, the example of the Apostles, and the practice of the Church from the first ages down to the present. Among the Jews, exclusion from the synagogue was a real excommunication (Esdl., x, 8). This was the exclusion feared by the parents of the man born blind (John, ix, 21 sqq.; cf. xii, 42; xvi, 2); the offences of which the culprit was guilty (Luke, vi, 22). It is also the exclusion which in due time the Christian Church should exercise: "And if he will not hear the church, let him be to thee as the heathen and publican" (Matt., xviii, 17). In the celebrated text: "Whatsoever ye shall bind upon earth, shall be bound also in heaven; and whatsoever ye shall loose upon earth, shall be loosed also in heaven" (Matt., xviii, 18; cf. xvi, 19), it is not only the remission of sins that is referred to, but likewise all spiritual jurisdiction, including judicial and penal sanctions. Such, moreover, was the jurisdiction conferred on St. Peter by the words: "Feed my lambs"; "feed my sheep" (John, xxi, 15, 16, 17). St. Paul excommunicated regularly the incestuous Corinthian (I Cor., v, 2) and the members of the household who were delivered over to Satan (I Tim., i, 20). Faithful to the Apostolic teaching and example, the Church, from the very earliest ages, was wont to excommunicate heretics and contumacious persons; since the fourth century numerous conciliar conciliaries pronounces excommunication against those who are guilty of certain crimes. Of the facts there can be no doubt (Sefg., Die Heilnömdenhdt der Kirche, Freiburg, 1903).

Excommunication not only External.—In the first
Christian centuries it is not always easy to distinguish between excommunication and penitential exclusion; to differentiate them satisfactorily we must await the decline and the institution of public penance and the well-defined separation between those things appertaining to the *forum internum*, or tribunal of conscience, and the *forum externum*, or public ecclesiastical tribunal; nevertheless, the admission of a sinner to the performance of public penance was consequent on a previous genuine excommunication. On the other hand, the institution of public penance and the charist and the other sacraments was only mitigated excommunication and identical with minor excommunication (see below). At any rate, in the first centuries excommunication is not regarded as a simple external measure; it reaches the soul and the conscience. It is not merely the severing of the outward bond which holds the individual to his place in the Church; it severs also the internal bond, and the sentence pronounced on earth is ratified in heaven. It is the spiritual sword, the heaviest penalty that the Church can inflict (see the patristic texts quoted in the Decree of Gratian, cc. xxxi, xxxii, xxxiii, G. xi, q. iii.), Hence in the Bull "Ex Surse Domine" (16 May, 1520) Leo X justly condemned Luther’s twenty-third proposition to the effect that, "if it be merely external punishments, nor do they deprive a man of the common spiritual prayers of the Church," Pius VI also condemned (Auctorem Fidei, 28 Aug., 1794) the forty-sixth proposition of the Pseudo-Synod of Pistoia, which maintained that the effect of excommunication is only exterior because of its own nature it excludes only from exterior communion with the Church. If, therefore, excommunication were not a spiritual penalty binding in heaven and affecting souls. The aforesaid proposition was therefore condemned as false, pernicious, already reproached in the twenty-third proposition of Luther, and, to say the least, erroneous. Undoubtedly the Church cannot (nor does it wish to) oppose any obstacle to the internal relations of the soul with God; she even implores God to give the grace of repentance to the excommunicated. The rites of the Church, nevertheless, are always the providential and regular channel through which Divine grace is conveyed to Christians; exclusion from such rites, especially from the sacraments, entails therefore regularly the privation of this grace, to whose sources the excommunicated person has no longer access.

History of Excommunication.—While excommunication ranks first among ecclesiastical censures, it existed long before any such classification arose. From the earliest days of the Christian society it was the chief (if not the only) ecclesiastical penalty for laymen; for guilty clerics the first punishment was deposition from their office, i.e. reduction to the ranks of the laity. Subsequently, when ecclesiastical discipline allowed clerics more easily to realize their ministry, the ancient deposition became suspension; thenceforth even clerics were subject to excommunication, by which they lost at once their rights as Christians and as clerics. Both laymen and clerics were henceforth threatened or punished with excommunication for offending the Church in the same way that laymen had been before, particularly for refusing obedience to a special ecclesiastical precept or the general laws of the Church. Once the *forum externum*, or public ecclesiastical tribunal, was distinctly separated from the *forum sacramentale*, or tribunal of sacramental penance, say from the ninth century on, excommunication became gradually an ever more powerful means of spiritual government, a sort of coercive measure ensuring the exact accomplishment of the laws of the Church and the precepts of her prelates. Excommunication was either threatened or inflicted in order to secure the observance of fasts and feasts, the payment of tithes, the obedience of inferiors, the denunciation of the guilty, also to compel the faithful to make known to ecclesiastical authority matrimonial impediments and other information.

Abuse.—This extension of the use of excommunication led to abuses. The infliction of so grave a penalty for offences of a less grievous kind and most frequently impossible to verify before the public ecclesiastical authority, begot eventually a contempt for excommunication. Consequently the Council of Trent was forced to recommend to all bishops and prelates marks of moderation in the use of censures (see Xiii, De ref.). The passage is too significant to be here omitted: "Although the sword of excommunication is the very sinews of ecclesiastical discipline, and very salutary for keeping the people to the observance of their duty, yet it is to be used with sobriety and great circumspection; seeing that experience teaches that if it be wielded rashly or for slight causes, it is more despised than feared, and works more evil than good. Wherefore, such excommunications which are wont to be issued for the purpose of provoking a revelation, or on account of things lost or stolen, shall be issued by no one whomsoever but the bishop; and not then, except on account of some uncommon circumstance which moves the bishop thereunto, and after the matter has been heard and deliberated, and very greatly weighed." Then follow equally explicit measures for the use of censures in judicial matters. This recommendation of the Council of Trent has been duly heeded, and the use of censures as a means of coercion has grown constantly rarer, the more so as it is hardly ever possible for the Church to obtain from the civil power the execution of such penalties.

Excommunication.—Various other ecclesiastical censures besides excommunication have been distinguished, but none has been so generally known as excommunication. In the course of time, also, the number of canonical excommunications was excessively multiplied, which fact, coupled with their frequent undeserved, made it difficult to know whether many among them were always in force. The difficulty was greater as a large number of these excommunications were reserved, for which reason theologians with much ingenuity construed favourably said reservation and permitted the majority of the faithful to obtain absolution without presenting themselves in Rome, or indeed even writing thither. In recent times the number of excommunications in force has been greatly diminished, and a new method of absolving from them has been inaugurated; it will doubtless find a place in the new codification of the Church law. In the meantime, without change of nature, excommunication in *foro externo* has become an exceptional penalty, reserved for very grievous offenses detrimental to Christian society; in *foro internum* it has been diminished and mitigated, at least in regard to the conditions for absolution from it. However, as can readily be seen from a perusal of the excommunications actually in force, it still remains true that what the Church aims at is not so much the crime as the satisfaction to be obtained from the culprit in consequence of his offence.

Refusal of Ecclesiastical Communion.—Finally, real excommunication must not be confounded with a measure formerly quite frequent, and sometimes even known as excommunication, but which was rather a sort of epitaph than a penalty in the strict sense. It is the refusal by a bishop to communicate in sacris with another bishop and his church, in consideration of an act deemed reprehensible and worthy of chastisement. It was undoubtedly with this withdrawal of communion that Pope Victor threatened (or actually punished) the bishops of Asia in the paschal controversy (Euseb., Hist. Eccl., V, xxiv); it was certainly the measure to which St. Martin of Tours had recourse when he refused to communicate with the Spanish bishops who caused Emperor Maximinus to demand to death the heretic Priscillian with some of his adherents (Sulpicius Severus, Dial., iii, 15). Moreover, a similar pri-
vocation of communion was in early Christian times imposed by councils as a regular penalty for bishops found guilty of certain minor faults; the most frequent example is that of bishops who, without good reason, neglected to attend the provincial council (so the Councils of Carthage, 401, can. xi; Agde, 500, can. xxvii; Tarragona, 516, can. vi; II Macou, 583, can. xx; etc.). These bishops were evidently not excommunicated, properly speaking; they continued to govern their dioceses and publicly to hold ecclesiastical services; they were simply deprived, as the aforesaid texts say, of the consolations of communion with their episcopal brethren.

IV. 

EXCOMMUNICATION.—(1) Major and Minor. — Until recently excommunication was of two kinds, major and minor. (a) Minor excommunication is uniformly defined by canonists and by Gregory IX (cap. lix, De sent. exc., lib. V, tit. xxxix) as prohibition from receiving the sacraments, what theologians call the passive use of the sacraments. In order to receive the Eucharist and the other sacraments, those who had incurred this penalty had to be absolved therefrom; as it was not reserved, this could be done by any confessor. Indirectly, however, it entailed other consequences. The canon law (cap. x, De cler. excomm. ministrante, lib. V, tit. xxvii) taught that the priest who celebrates Mass while under the ban of minor excommunication sins grievously; also that he sins similarly in administering the sacraments, and all done under his hands are null and void. For other himself is ineligible to a canonical office. This is readily understood when we remember that the cleric thus excommunicated was presumed to be in the state of grievous sin, and that such a state is an obstacle to the lawful celebration of Mass and the administration of the sacraments. Minor excommunication was really identical with deprivation of the sacraments prior to his reconciliation, was admitted to public penance. Minor excommunication was incurred by unlawful intercourse with the excommunicated, and in the beginning no exception was made of any class of excommunicated persons. Owing, however, to many inconveniences arising from this condition of things, especially after excommunications had been pronounced by them, the term "ad evitanda scandalum" (1418), restricted the aforesaid unlawful intercourse to that held with those who were formally named as persons to be shunned and who were therefore known as vitandi (Lat. vitare, to avoid), also with those who were notoriously guilty of striking a cleric. But as this twofold category was in modern times found unpracticable, and a penalty no longer existed, this minor excommunication, and eventually it ceased to exist after the publication of the Constitution "Apostolice Sedis". The latter declared that all excommunications latera sententiae that it did not mention were abolished, and as it was silent concerning minor excommunication (by its nature an excommunication latera sententiae of a special kind), canonists concluded that it too was by this constitution no longer existed. This conclusion was formally ratified by the Holy Office (6 Jan., 1884, ad 4).

(b) Major excommunication, which remains now the only kind in force, is therefore the kind of which we treat below, and to which our definition fully applies. Anathema is a sort of aggravated excommunication (by its nature an excommunication latera sententiae of a special kind), canonists concluded that it too was by this constitution no longer existed. This conclusion was formally ratified by the Holy Office of the year 1884.

(2) A jure et ab homine. — Excommunication is either a jure (by law) or ab homine (by judicial act of man, i.e. by a judge). The first is provided by the law itself, which declares that whoever shall have been guilty of a definite crime will incur the penalty of excommunication. The second is inflicted by an ecclesiastical prelate, either when he issues a serious order under pain of excommunication or imposes this penalty by judicial sentence and after a criminal trial.

(3) Latre and Ferenda Sententiae. — Excommunication, especially a jure, is either latre or ferenda sententiae. The first is incurred as soon as the offence is committed and by reason of the offence itself (to ipsis) without intervention of any ecclesiastical judge; it is recognized in the terms used by the legislator, for instance: "the culprit will be excommunicated at once, by the fact itself (statim, ipsis facto)". The second is indeed foreseen by the law as a penalty, but is inflicted on the culprit only by a judicial sentence; in other words, the delinquent is rather threatened than punished with a penal sentence. When the judge has summoned him before his tribunal, declared him guilty, and punished him according to the terms of the law. It is recognized when the law contains these or similar words: "under pain of excommunication"; "the culprit will be excommunicated".

(4) Public and Occult. — Excommunication ferenda sententiae can be public only, as it must be the object of a declaratory sentence pronounced by a judge; but excommunication latre sententiae may be either public or occult. It is public through the publicity of the law when it is imposed and published by ecclesiastical authority; it is public through notoriety of fact when the offence that has incurred it is known to the majority in the locality, as in the case of those who have incurred the penalty do not merit concealment, or by force of church property. On the contrary, excommunication is occult when the offence entailing it is known to no one or almost no one. The first is valid in the forum externum and consequently in the forum internum; the second is valid in the forum internum only. The practical difference is very important. He who has incurred occult excommunication should treat himself as free from the penalty, while he who has incurred a public sentence as free as possible, submitting to whatever conditions will be imposed upon him, but this only in the tribunal of conscience; he is not obliged to denounce himself to a judge nor to abstain from external acts connected with the exercise of jurisdiction; he may seek absolution without making himself known either in confession or to the Sacred Penitentiary. According to the teaching of St. Thomas, (q. XIV, d. IX, a. 5, x. 3), "the penalty is occasional. The declaratory of the offence is always necessary in the forum externum, since in this tribunal no one is presumed to be excommunicated unless convicted of a crime that entails such a penalty". Public excommunication, on the other hand, is removed only by a public absolution; when it is question of simple publicity of the sentence, with which the faithful is concerned, it is nevertheless public, inasmuch as it is given to a known person and appears as an act of the forum externum.

(5) Vitandi and Tolerati. — Public excommunication in foro externo has two degrees according as it has or has not been formally published, or, in other words, according as excommunicated persons are to be shunned (vitandi) or tolerated (tolerati). A formally published excommunication (vitandi) can be absolved, but when the sentence has been brought to the knowledge of the public by a notification from the judge, indicating by name the person thus punished. No special method is required for this publication; according to the Council of Constance (1414–18), it suffices that the sentence have been published or made known to the judge by the vicar ordinary or otherwise. These persons, thus excommunicated are to be shunned (vitandi), i.e. the faithful must have no intercourse with them either in regard to sacred things or (to a certain extent) profane matters, as we shall see farther on. All other excommunicated persons, even though known, are tolerati, i.e. the law no longer obliges the faithful to abstain from intercourse with them, even in religious matters. This distinction dates from the aforesaid Constitution "Ad evitanda scandalum", published by Martin V at the Council of Constance in 1418; until
then one had to avoid communion with all the excommunicated, once they were known as such. “To avoid scandal and numerous dangers”, says Martin V, “and to relieve timorous consciences, we hereby mercifully grant to all the faithful that henceforth no one need refrain from communicating with another in the reception or administration of the sacraments, or in other matters Divine or profane, under pretext of any ecclesiastical sentence or censure, whether promulgated in general form by law or by a judge, nor avoid anyone whomsoever, nor observe an ecclesiastical interdict, except when this sentence or censure shall have been published by means of an act of official express form, against some certain, specified person, college, university, church, community, or place.”

But while notoriously excommunicated persons are no longer vitandi, the pope makes an exception of those who have “incurred the penalty of excommunication by reason of saerilegious violence against a cleric, and so notoriously that the fact cannot in no way be dissimulated or excused.” He declares, moreover, that he has not made this concession in favour of the excommunicated, whose condition remains unchanged, but solely for the benefit of the faithful. Hence, in virtue of ecclesiastical law, the latter need no longer deprive themselves of intercourse with those of the excommunicated who are “tolerated”. As to the vitandi, notably the end of those who sinned and are bound by government, they must be shunned by the faithful as formerly. It is to be noted now that the minor excommunication incurred formerly by these forbidden relations has been suppressed; also, that of the major excommunications inflicted on certain definite acts of communion with the vitandi, only two are retained in the Constitution “Apostolicus Sedis” (II, 16, 17): that inflicted on any person whose become a constant and wilful remitter of sacrilegious nomenclative excommunication by the pope, and that pronounced against clerics alone for spontaneous and conscious communion in sacris with persons whom the pope has excommunicated by name. Moreover, those whom bishops excommunicate by name are as much vitandi as are those similarly excommunicated by the pope.

16) Reserved and Non-Reserved. Finally, excommunication is either reserved or non-reserved. This division affects the absolution from censure. In the forum internum any confessor can absolve from non-reserved excommunications; but those that are reserved can only be remitted, except through indulgences or dispensations by delegation, by those to whom the law reserves the absolution. There be two kinds of excommunications reserved to the pope (these being divided into two classes, according to which they are either specially or simply reserved to him) and those reserved to bishops or ordinaries. As to excommunications ab homine, absolution from them is reserved by law to the judge who has inflicted them. In a certain sense excommunications may also be reserved in virtue of the persons who incur them; thus absolution from excommunications in foro externo incurred by bishops is reserved to the pope; again, custom reserves to him the excommunication of sovereigns.

III. WHO CAN BE EXCOMMUNICATED?—Excommunication is an act of ecclesiastical jurisdiction, the rules of which it follows. Hence the general principle: whoever has been excommunicated cannot be excommunicated, and so called, can excommunicate, but only his own subjects. Therefore, whether excommunications be a jure (by the law) or ab homine (under form of sentence or precept), they may come from the pope alone or a general council for the entire Church; from the provincial council for an ecclesiastical province; from the bishop for the diocese; from a vicar-general for quasi-diocesan territories; and from regular prelates for religious orders. Moreover, anyone can excommunicate who, by virtue of his office, even when delegated, has contentious jurisdiction in the forum externum; for instance, papal legates, vicars capitular, and vicars-general. But a parish priest cannot inflict this penalty nor even declare that it is incurred, i. e. he cannot do so in an official and judicial manner. The subjects of these various authorities are those who come under their jurisdiction chiefly on account of domicile or quasi-domicile in their territory; then by reason of the offence committed while on such territory; and finally by reason of personal right, as in the case of regulars.

IV. WHO CAN BE EXCOMMUNICATED?—Since excommunication is the forfeiture of the spiritual privileges of ecclesiastical society, any person may be excommunicated, so long as he has offended the Church. Consequently excommunication can be inflicted only on baptized and living persons. Although the Church recites against the devil exorcisms in which the word anathema occurs, he cannot be excommunicated, for he in no way belongs to the Church. Among living persons, those who have not been baptized have never been members of the Christian society and therefore cannot be deprived of spiritual benefits to which they have never had a right; in this way, infidels, pagans, Mohammedans, and Jews, though outside of the Church, are not excommunicated. As the baptized cease, at death, to belong to the Church Militant, the dead cannot be excommunicated. On the other hand, the demise of a Christian person, it may be officially declared that such person incurred excommunication during his lifetime. Quite in the same sense he may be absolved after his death; indeed, the Roman Ritual contains the rite for absolving an excommunicated person already dead (Tit. III, cap. iv: Ritus absolvendi excommunicatum jam mortuum). However, therapy, the sentence of excommunication excommunicates him solely from the effects of excommunication, notably ecclesiastical burial. With the foregoing exceptions, all who have been baptized are liable to excommunication, even those who have never belonged to the true Church, since by their baptism they are really her subjects, though of course rebellious ones. Moreover, the Church excommunicates not only those who have abandoned the true faith to embrace schism or heresy, but likewise the members of heretical and schismatic communities who have been born therein. As to the latter, however, it is not question of personal excommunication; the censure overtakes them in their corporate capacity, as members of a community in revolt against the true Church of Jesus Christ.

Catholics, on the contrary, cannot be excommunicated unless for some personal, grievously offensive act. Here, therefore, it is necessary to state with precision the conditions under which this penalty is incurred. Just as exile presupposes a crime, excommunication presupposes a grievous external fault. Not only would it be wrong for a Christian to be punished without having committed a punishable act, but justice demands a proportion between the offence and the penalty; hence the most serious of spiritual chastisements, i. e. forfeiture of all the privileges common to Christians, is inconceivable unless for a grave fault. Moreover, in order to fall within the jurisdiction of the forum externum, which alone can inflict excommunication, this fault must be external. Internal failings, e. g., doubts, disbeliefs, or heresies against the Catholic Faith, cannot incur excommunication. Note, however, that by external fault is not necessarily meant a public one; an occult external fault calls forth occult excommunication, but in foro interno, as already seen. Most authors add that the offence must be consummated, i. e. complete and perfected in its kind (in genere et modo), unless by reason of a judicial penalty. This, however, is a rule of interpretation rather than a real condition for the incurring of censure, and is tantamount to saying that at attempt at a crime does not entail the penalty meted out to the crime itself,
but that if the legislator declares that he wishes to punish even the attempt, excommunication is incurred (cf. Const. "Apost. Sedis" I, III, 1, for attempt at marriage on part of clerics in major orders).

Considered from a moral and juridical standpoint, the guilt requisite for the incurring of excommunication implies, first, the full use of reason; second, sufficient moral liberty; finally, a knowledge of the law and even of the penalty. Where such knowledge is lacking, there is no contumacy, i.e., no contempt of ecclesiastical authority, in declaring oneself guilty of performing an action known to be forbidden, and forbidden under a certain penalty. The prohibition and the penalty are known either through the text of the law itself, which is equivalent to a juridical warning, or through admonitions or proclamations issued expressly by the ecclesiastical judge. Hence arises various extenuating reasons (causa excusantes), based on lack of guilt, which prevent the incurring of excommunication: (1) Lack of the full use of reason. This excuses children, also those who have not attained the age of puberty, and, a fortiori, the demented. Inad- vertence, however, is not presumed; while it may affect moral responsibility and excommunication in foro externo, it is no obstacle to juridical guilt. (2) Lack of information. The lack of knowledge impairs the freedom of the will, and while it continues contumacy or rebellion against the laws of the Church cannot be presumed. Evidently, a proper estimation of this extenuating reason depends on the circumstances of each particular case and will be more readily accepted as an excuse for violating a positive law than an obligation, because the person is not per- fectly aware of the nature of the act or its effects. (3) Ignorance. The general principle is, that whosoever is ignorant of the law is not responsible for transgressing it; and whosoever is ignorant of the penalty does not incur it. But the application of this principle is often complicated and delicate. The following considerations, generally admitted, may serve as a guide: (a) All ignorance, both of law and of fact, is exculpable whether or not it was in extenuation of its penalty. (b) Ordinarily, gross ignorance does not excuse from punishment. But it does so only when the law formally exacts a positive knowledge of the prohibition. The laws that inflict excommunication contain as a rule two kinds of expressions. Sometimes the offence only is mentioned, e. g. "all apostates, heretics", etc., or "those who absolve their ac- coimplices in sin against chastity" (Const. "Apost. Sedis" I, 1, 10). Sometimes clauses are inserted that exact, as a necessary condition, the knowledge or ef- frontery of the culprit, e.g., "those who knowingly read books" condemned under pain of excommunication, "regulars who have the audacity to administer the Viaticum without permission of the parish priest" (Const. "Apost. Sedis" I, 1, 10); (c) The ignorance known as ignorance excuses in the second case but not in the first. (e) For many authors, affected ignorance is equivalent to a knowledge of the law, since by it some avoid enlightening themselves concerning a dreaded penalty; these authors conclude that such ignorance never excuses. Other canonists consider that every penal law is to be strictly incumbent when, therefore, if positively exacts knowledge on the part of the culprit, he is ex- cused even by affected ignorance. As, in practice, it is not always easy to establish the shades of difference, it will suffice to remark that in a case of occult excommuni- cation the culprit has the right to judge himself and to be judged by his confessor according to the ex- act truth, whereas, in the forum externum the judge decides according to presumptions and proofs. Con- sequently, in the tribunal of conscience he who is rea- sonably persuaded of his innocence cannot be ex- pelled to treat himself as excommunicated and to seek absolution; this conviction, however, must be prudently established.

V. EFFECTS OF EXCOMMUNICATION.—If we consider only its nature, excommunication has no degrees: it simply deprives clerics and laymen of all their rights in Christian society, which total effect takes on a visible form in the enforcement of a certain punishment or advantages of which the excommunicated cleric or layman has been deprived. The effects of excommuni- cation must, however, be considered in relation also to the rest of the faithful. From this point of view arise certain differences according to the various classes of excommunicated persons. These differ- ences were not introduced out of regard for the excommuni- cated, rather for the sake of the faithful. The latter would suffer serious inconveniences if the nullity of all acts performed by excommunicated clerics were rigidly maintained. They would also be exposed to grievous perplexities of conscience if they were strictly obliged to avoid all intercourse, even profane, with the excommunicated. Hence the practical rule for inter- ruping the effects of such interdicts in all the cases that regards the excommunicated, but mildness for the faithful. We may now proceed to enumerate the immediate effects of excommunication. They are summed up in the two well-known verses:—

Res sacre, ritus, communio, crypta, potestas, praeda sacra, forum, civilia jura vetantur, i.e., classes of law, so that the subjects of Divine law

(1) Res sacra.—These are the sacraments; the excommuni- cated are forbidden either to receive or administer them. The sacraments are of course validly administered by excommunicated persons, except those (penance and matrimony) for whose administra- tion jurisdiction is necessary; but the reception of the sacraments by excommunicated persons is always il- licit. The licit administration of the sacraments by excommunicated ecclesiastics hinges upon the benefit to be derived by the faithful. Ecclesiastics excommuni- cated by name are forbidden to administer the sacraments except in cases of extreme necessity; the same is true from the case of others excepted by jurisdiction by such ecclesiastics are null (Decret. "Ne temere", art. iv). Excommunicated ecclesiastics tol- erati, however, may licitly administer the sacraments to the faithful who request them at their hands, and the acts of jurisdiction thus posited are maintained by reason of the benefit accruing to the faithful, most fre- quently also because of common error (error communis), i.e. a general belief in the good standing of such ecclesiastics. The faithful, on their side, may, without sin, ask tolerated excommunicated ecclesiastics to ad- minister sacraments to them; they would, however, sin grievously in making this request of the vitandi, except in case of urgent necessity.

(2) Ritus.—Hereby are meant the Mass, the Divine Office, and all other sacred ceremonies. An excommunic- ated person may not and should not assist at these ceremonies. If he be a tolerant, his presence need not be taken into account, and the service can be con- tinued. If he be a vitandus he must be warned to retire, and in case of refusal he must be forcibly com- pelled to withdraw; but if he still persists in remain- ing, the service must be discontinued, even if the Mass has been commenced. (Benedict XIV, De suer. Miss., sect. ii, n. 117.) Nevertheless, since the condition of an excommunicated person, even a vitandus, is no worse than that of an infidel, he may assist at sermons, instructions, etc., venerate images and relics, take holy water, and use privately other sacramentals. The excommunicated cleric is
not released from any of his obligations in regard to the Divine office and, if bound to it, must recite it, but privately and not in the choir. A toleratus may be admitted to the choir, but a vitandus must be expelled therefrom. All excommunicated clerics are prohibited from celebrating Mass and performing other strictly liturgical functions, under penalty of the irregularity ex delicto for violation of the censure; participation in the liturgical acts performed by an excommunicated cleric is a forbidden communicatio in sacris; however, no censure would result from it except when it is the consequence of voluntary communication in sacris with those with whom the pope had excommunicated by name (Const. "Apost. Sedis", II, 17). In each case the fault should be estimated according to circumstances.

(3) Communion.—These are, properly speaking, the public suffrages of the Church, official prayers, indulgences, etc., in which the excommunicated have no share. But they are not excluded from the private suffrages (i.e. intercessory petitions) of the faithful, who can pray for them.

(4) Crypta.—This word signifies ecclesiastical burial, of which the excommunicated are deprived. In chapter xxi, de seipolitis (lib. III, tit. xxviii), Innocent III says: "The canons have established that we should not communicate in the vitiandus, nor those with whom we did not communicate during their lifetime, and that all those should be deprived of ecclesiastical burial who were separated from the unity of the Church, and at the moment of death were not reconciled thereunto." The Ritual (tit. VI, cap. ii, n. 2) renews this prohibition for those publicly excommunicated, and makes it subject to the jurisdiction of the papal tribunal. Consequent to this the excommunication has been publicly proclaimed (Many, De locis saecris, p. 354), so that, under this head, the ancient discipline is no longer applicable, except to the vitandus. However, this does not mean that the tolerati can always receive ecclesiastical burial; they may be deprived of it for other reasons, e.g. as heretics or public sinners. Apropos of this leniency, it must be remembered that it is not the excommunicated the Church wishes to favour, but rather the faithful for whose sake communion with the tolerati is allowed in the matter of burial as well as in other matters. The interment of a toleratus in a consecrated cemetery carries with it no longer the desecration of said cemetery: this would follow, however, in the case of the vitandus. (See Burial.)

Excommunication is a purely ecclesiastical jurisdiction, of which both the passive and the active use, to speak canonically, are forbidden the excommunicated. Jurisdiction is used passively when a person is the object of one of its acts, of a concession. Now, ecclesiastical authority has no official relations with the state unless, at his request, it negotiates the conditions for his return to society. Connected with this discipline is the rule forbidding the excommunicated to receive from the pope any kind of rescript (of grace or justice), except in regard to their excommunication, under pain of nullity of such rescript (c. xxvi, de rescriptis, lib. I, tit iii, and c. i, cod., in VI). Hence the custom of inserting in papal rescripts the so-called ad effectum absolution from censures, intended solely to ensure the validity of the excommunication, if already existing. Jurisdiction is used actively when exercised by its depositaries. It is easy to understand that the Church cannot leave her jurisdiction in the hands of those whom she excludes from her society. In principle, therefore, excommunication entails the loss of jurisdiction both in foro externo and in foro interno and renders null all acts accomplished without the necessary jurisdiction. However, for the general good of society, the Church maintains jurisdiction, despite occult excommunication, and supplies it for acts performed by the tolerati. But as the vitandus are known to be such, this merciful remedy cannot be applied to them except in certain cases of extreme necessity, when jurisdiction is said to be "supplied" by the Church.

(6) Prohib. sacra are ecclesiastical benedictions. The excommunicated ecclesiastical is incapable of acquiring a benediction, and his presentation to it would be legally null. A benediction already held is not forfeited at once, even when to the censure the law adds privation of benediction; this is carried into effect only through a sentence which must be at least declaratory and issue from a competent court (i.e. an apostolic court). Not, less, from the very first the excommunicated beneficiary loses those fruits of his benediction belonging to choir service, provided it is bound thereto. Moreover, should he live a year in the state of excommunication, he can be deprived of his benedicture through judicial sentence. The aforesaid effects do not result from occult excommunication.

(7) Forum.—The excommunicated person is an exile from ecclesiastical society, consequently from its tribunals: only inasmuch, however, as they would be to his advantage. On the other hand, if he be summoned before them to satisfy a third party he is obliged to appear. Hence he cannot appear as plaintiff, prosecutor, or advocate; he may be the defendant, or the party accused. In this case the pope and the tolerati consists in this, that the former must be prevented from introducing any legal action before an ecclesiastical tribunal, whereas the latter can be debarred from so doing only when the defendant all ages and proves excommunication as already incurred. It is a question here only of public excommunication and before ecclesiastical tribunals. The other relations between members of the same society, outside of sacred and judicial matters. This privation, affecting particularly the person excommunicated, is no longer imposed on the faithful except in regard to the vitandus. The medieval canonists enumerated the prohibited civil relations in the following verse:

They may not own, value, communicate, mensa negarum, namely: (a) conversations, exchange of letters, tokens of benevolence (osculum); (b) prayer in common with the excommunicated; (c) marks of honour and respect; (d) business and social relations; (e) meals with the excommunicated. But at the same time they specified the reasons that rendered these relations licit:

Utile, lex, humili, res ignorata, nescie, that is to say: (a) both the spiritual and the temporal benefit of the excommunicated and of the faithful; (b) conjugal law; (c) the submission owed by children, servants, vassals, and subordinates in general; (d) ignorance of excommunication or of the prohibition of a particular kind of intercourse; (e) finally, any kind of necessity, as human law, is not binding to this degree. Remote Effects.—All the effects that we have just enumerated are the immediate results of excommunication, but it also causes remote effects, which are not a necessary consequence and are only produced when the person censured occasions them. They are three in number: (1) The cleric who violates excommunication by exercising one of the liturgical functions of his order, incurrs an irrevocable excommunication. The excommunicated person who remains a year without making any effort to obtain absolution (insordescencia) becomes suspected of heresy and can be followed up and condemned as guilty of such (Council of Trent, Sess. XXV, cap. iii, De ref.; cf. Ferraris, s. v. "Insordescens"). (2) This neglect makes it the judge's duty to deprive the excommunicated cleric of all benefices, though some judges postpone for three years the fulfilment of this obligation (see Pollweck, Die kirchlichen Strafgesetze, art. I, note 3).

Effects of Invalid or Unjust Excommunication.—An excommunication is said to be null when it is invalid because of some intrinsic or essential defect, e.g. when
the person inflicting it has no jurisdiction, when the motive of the excommunication is manifestly incorrect and inconsistent, or when the excommunication is essentially defective in form. Excommunication is said to be unjust when, though valid, it is wrongfully applied to a person really innocent but believed to be guilty. Here, of course, it is not a question of excommunication late sententia and in foro interno, but only of one imposed or declared by judicial sentence. It is admitted by all that a null excommunication produces no effect, and that it may always be declared invalid (cap. vii, de const., in VI.). But a case of unjust excommunication brings out in a much more general way the possibility of conflict between the forum internum and the forum externum, between legal justice and the real facts. In chapter xxviii, de sent, excomm. (Lib. V., tit. xxxix), Innocent III formally admits the possibility of this conflict. Some persons, he says, may be free in the eyes of God but bound in the eyes of the Church; vice versa, some may be free in the eyes of the Church but bound in the eyes of God: for God’s judgment is based on the very truth itself, whereas that of the Church is based on arguments and presumptions which are sometimes erroneous. He concludes that the chain by which the sinner is bound in the sight of the Church is severed only by removal of the sentence, whereas that which binds him in the sight of the Church is severed only by removal of the sentence. Consequently, a person unjustly excommunicated is in the same state as the justly excommunicated sinner who has repented and recovered the grace of God; if he has not forfeited internal communion with the Church, and God can bestow upon him forgiveness of his sins, he is no longer under excommunication, whereas that which binds him in the sight of the Church is severed only by removal of the sentence. It reinstates the repentant sinner in the Church; restores the rights of which he had been deprived, beginning with participation in the sacraments; and for this very reason, it should precede sacramental absolution, which it thenceforth renders possible and efficacious. After absolution from excommunication has been given in foro externo, the judge sends the person absolved to a confessor, that his sin may be remitted; when absolution from censure is given in the confessional, it should always precede sacramental absolution, conformably to the instruction in the Ritual and the very tenor of the formula for sacramental absolution. It may be noted at once that the principal effect of absolution from excommunication may be acquired without the excommunication itself, if the person’s sin is wholly reinstated in his former position. Thus, an ecclesiastical might not necessarily recover the benefice which he had lost; indeed he might be admitted to holy communion only. Ecclesiastical authority has the right to posit certain conditions for the return of the culprit, and every absolution from excommunication calls for the fulfilment of certain conditions which vary in severity, according to the case. Excommunication, it must be remembered, is a medicinal penalty intended, above all, for the correction of the culprit; therefore his first duty is to solicit pardon by showing an inclination to obey the orders given him, just as it is the duty of ecclesiastical authority to receive back the sinner as soon as he repents and declares himself disposed to give the required satisfaction. This satisfaction is often indicated in the law itself; for instance, usurpers of ecclesiastical dignity are excommunicated until such time as they make restitution (Council of Trent, Sess. XXII, c. xi); and again, it is determined by the judge who grants absolution or the indulgents for absolving. Besides expiatory practices habitually known as “pennance”, such satisfaction exacts opportune measures for the reparation of the injury done. It is therefore obvious that it is not always necessary that these measures be executed prior to absolution, which is frequently granted on the solemn promise of the excommunicated party either to accomplish a specified act, such as coming to an agreement with the Church for the property usurped, or simply to abide by the orders of ecclesiastical authority (sancti mandatis ecclesiae). In such cases absolution is not usually given under pain of “reinforcement” (ad reincidendum), i. e., if within a definite period the person censured has not accomplished a certain specified act, he reinfurs the same excommunication; but his status is just as if he had never been absolved. However, this clause of reinforcement is not to be presumed; when occasion requires, it is inserted in the sentence of absolution or in the indulgents for that purpose.

The formula of absolution from excommunication is not strictly determined, and, since it is an act of jurisdiction, it suffices if the formula employed express clearly the effect which it is desired to attain. The formula for remitting the excommunication in foro externo should be such as to make it manifestly public excommunication. Similarly, an excommunication imposed by judicial sentence is to be revoked by an absolution in the same form; occult excommunication may be revoked in the confessional by the sacramental formula. The Roman Ritual (tit. III, c. ii) gives the formula of absolution used in foro externo and states that in foro interno absolution is given in the usual sacramental form.

Who Can Absolve from Excommunication?—The answer is given in the customary rules of jurisdiction. The right to absolve evidently belongs to him who can excommunicate and who has imposed the law, moreover to any person delegated by him to this effect, since this power, being jurisdictional, can be delegated. First, there are magistrates, i. e., those who can pronounce excommunication ab homine, which is judicial, and excommunication a jure, i. e., late sententia. For the former, absolution is given by the judge who inflicted the penalty (or by his successor), in other words by the pope, or the bishop (ordinary), also by the superior of said judge when acting as judge of appeal. As to excommunication late sententia, the power to absolve is either ordinary or delegated. Ordinary power is determined by the law itself, which indicates to what authority the censure is reserved in each case. Delegated power is of two kinds: that granted in permanence and set down in the law and that granted or communicated by personal act, e. g. by authority (faculties) of the Roman Penitentiary, by episcopal delegation on special cases, or to certain faculties of the Sacred College. Of the second kind of delegation there is need to speak, as it belongs to each one to verify the power (faculties) that he possesses. Delegation of the first kind carries with it the power to absolve from excommunication without special request or particular faculties. Such power is in this case conferred by the law itself. Nevertheless this power is subject to the general law that governors delegation and is valid only for the cases and under the conditions mentioned in the concession. Thus faculties granted for the forum internum cannot be extended to the forum externum, nor can those granted for simply reserved excommunications be used for specially reserved cases, and so on. However, the faculties proceeding from
EXCOMMUNICATION

both kinds of delegation may be "cumulated", i.e. may be held and exercised in favour of the same person.

These principles admitted, we must remember that with reference to reservation or the right to absolve, excommunications are divided into four classes: excommunications specially reserved to the pope; excommunications simply reserved to the pope; excommunications reserved to the bishop (ordinary); and, finally, excommunications that are not reserved (neminii reservata).

According to this classification, as a general rule, only the pope can absolve from the first two kinds of excommunication, although his power extends to the others; bishops (ordinaries), but not others, can reserve communications of the third class; finally, those of the last kind are reserved to the pope only, can be revoked by any approved priest, without further special delegation. At this point, however, must be considered certain concessions of the law that may be made in three categories: the permanent faculties of bishops; concessions for urgent cases; and concessions for the point of death.

(1) The Faculty of the Council of Trent (Sess. XXIV, c. vi, De ref.) authorizes bishops to absolve their own subjects in their own dioceses from all excommunications, consequently from those reserved to the Holy See, when occult or, rather, not pertaining to the forum externum. They can exercise this power either in person or through a special delegate of their own choosing, but only in conscience only. However, the Constitution "Appe- lice Sedis" restricted the provision of the council to excommunications simply reserved to the pope, so that, without special indult, bishops can no longer absolve from specially reserved cases, even in foro interno. On the other hand, the indults they receive are more or less liberal and widely communicable.

Dealogicorum in rebus, he may be absolved by his bishop to the order of the both cases: excomm., lib. V, tit. xxxix), Innocent III sets forth the principle that governs such cases: "When it is difficult for the excommunicated person to go to him who excommunicated him, he may be absolved by his bishop or even by his own priest, on promising to obey the orders of him by whom excommunication was pronounced."

This was the principle that moralists and canonists formulated as an axiom: "Impedito casus papalis fit episcopalis: in case of one who is prevented from presenting himself to the pope, the excommunication reserved to the pope may be removed by the bishop. But many authors carried the analogy still further: for him who is prevented from presenting himself to the bishop, the excommunication may be removed by the other духовные power, and he may, on the condition of submitting to the orders of the pope or the bishop, the moralists and canonists generally taught as follows: First, no one was obliged to apply in writing (correct as to the removal of excommunication, though Innocent III says nothing of this kind concerning a request for information). Then they distinguish between obstacles that were more or less pronounced: if perpetual obstacles were such as exceed five years; obstacles of long duration were those lasting over six months; and obstacles of short duration, those continuing for less than six months. When the obstacle was perpetual the bishop or, if he could not be reached, any priest might absolve without appealing to the superior; this could also be done, but not without certain conditions, in the case of the removal of the obstacle, when the latter was of long duration, provided there were urgency. Finally, the author drew up a long list of those who were supposed to be able to present themselves in person to the pope; and this list included almost every one (Gury, Thel. Moralis, II, nn. 952 and 973). This practice, far more lenient than the general principle, has been recently profoundly modified by a decree of the Congregation of the Inquisition (Holy Office) dated 23 June, 1886. Henceforth "in urgent cases when absolution cannot be deferred without danger of grave scandal or infamy, which is left to the conscientious appreciation of the confessor, the latter, after having imposed the necessary satisfaction, can absolve, without other faculties, from all censures, even those specially reserved to the Holy See, but under pain of monasticism the same censure if, within a month, the penitent thus absolved does not recur to the Holy See by letters and through the medium of the confessor."

This new method has been more precisely explained and even rendered easier by subsequent papal decisions. The absolution thus given is direct (Holy Office, 19 Aug., 1891), and although recourse to the Penitentiary is obligatory, the form of appeal is only an expedient to solicit the order of the Church, the penitent, as stated above, having had to make a serious promise to conform to them (standi mandatis Ecclesiae). The power thus granted in urgent cases is valid for all cases, without exception, reserved by law to the pope or the ordinary, even for the absolution of an accomplice (H. O., 27 Jul.), he or she incurs the former censures, which remain effective until there is a new absolution followed by recourse to Rome. There would, however, be no recurrence if the interval of a month were to expire through the confessor's fault. It is to be noted that this sanction of recurrence applies to all censures reserved to the pope, but not to those reserved by law to the bishop or to the ordinaries. It is not obligatory for censures reserved to diocesan law. Bishops, however, could profitably apply it to such censures, and some have already done so.

(3) In Danger of Death.—It is a principle repeatedly set forth in canon law that at the point of death all reservations cease and all necessary jurisdiction is supplied by the Church. "At the point of death," says the Council of Trent (Sess. XIV, c. vii), "in danger of death", says the Ritual (tit. III, cap. i, n. 23), any priest can absolve from all sins and censures, even if he be without the ordinary faculties of confessors, or if he himself be excommunicated; he may do so even in presence of another priest properly authorized (Holy Office, 19 Aug., 1891)." The Apostolic constitution "Apostolicæ Sedis" expressly maintains this meretricious concession, merely adding, for the case in which the moribund is restored to health, the obligation of having recourse to the Holy See, if he has been absolved from excommunication specially reserved to the pope, unless he prefers to ask absolution of a confessor provided with special faculties. This recourse, although general to all urgent cases, nevertheless differs from it on two points: it is not imposed for the absolution from excommunications simply reserved, and the short delay
of a month is not counted from the time of receiving absolution, but from the time of recovery.

VII. Excommunications Late Sententiae Now in Force.—In the preamble of the Constitution "Apostolice Sedis", Pius IX stated that during the course of centuries, the number of censures late sententiae had increased inordinately, that some of them were no longer expedient, that many were doubtful, that they occasioned frequent difficulties of conscience, and finally, that a reform was necessary. On this head Pius IX had anticipated the almost unanimous request of the Catholic episcopate presented at the course of centuries, the number of censures late sententiae (L. A. L. n. c. 174, etc.). The number of excommunications late sententiae enumerated by the moralists and canonists is really formidable: Ferraris (Prompta Biblioth., s. v. Excommunication, art. ii-iv) gives almost 200. The principal ones were destined to protect the Catholic Faith, the ecclesiastical hierarchy and its jurisdiction, and figured in the Bull known as "In Cuma Domini" read publicly each year in Rome, on Holy Thursday. In time, this document had received various additions (Ferraris, loc. cit., art. ii, the text of Clement XI), and from it the Constitution "Apostolice Sedis" derives excommunications specially reserved, with exception of the tenth. The Constitution of Pius IX deals with no penalties other than censures; it leaves intact all censures late sententiae but suppresses all censures late sententiae and sentences. Besides those which it enumerates it retains: (1) the censures decretal (and not simply mentioned) by the Council of Trent; (2) the censures of special law, i.e. those in vigour for papal elections, those enforced in religious orders and institutes, in colleges, communities, etc. As to the censures enumerated, they should be understood to mean, that both ancient and modern texts should be consulted for them only so far as such texts have not been modified by the new law.

Thus the excommunications late sententiae, enforced to-day by common law in the Catholic Church proceed from three sources: (A) those enumerated in the Constitution "Apostolice Sedis"; (B) those pronounced by the Council of Trent; and (C) those introduced subsequently to the Constitution "Apostolice Sedis", i.e. earlier than 12 October, 1869. We enumerate them here with a brief commentary.

A. Excommunications of the Constitution "Apostolice Sedis".—These are divided into four categories: (a) those specially reserved to the pope; (b) those simply pronounced by the pope; (c) those reserved to the bishop (ordinary); (d) those reserved to the superiors.

(a) Excommunications specially Reserved to the Pope.—These are twelve in number and are imposed upon the following persons:

(1) "All apostates from the Christian Faith, heretics of every name and sect, and those who give them credence, who receive or countenance them, and generally all who belong to a non-Christian religion, e.g. Islam; to such apostates are assimilated those who publicly renounce all Christian religion; this apostasy is not to be presumed; it is evident that both kinds of apostates exclude themselves from the Church. A heretic is one who rejects a Catholic faith. The apostate is one who has fallen from his own volition. A heretic who becomes such of his own volition, who being in the Catholic Church, obstinately repudiates a truth of faith. Excommunication is incurred by him, if, with full knowledge, he exteriorly formulates an heretical proposition; and if he seeks to propagate his error he is dogmatizes and should be denounced. Next comes the heretic who belongs to an heretical association; for such a person his heretical membership alone is sufficient to bring him under sentence of excommunication. In his case the penalty is incurred by adhesion to the heresy, notably by wilful and active par-

ticipation in sacris (i.e. in public worship) with heretics; hence the excommunication of those who contract a mixed marriage before an heretical minister as such (Holy Office, 28 Aug., 1868). Finally, the penalty extends to those who believe in heretics (credentes) and join their ranks; to those who receive them, i.e. who give them shelter in their homes, so as to protect them from the pursuit of authority; and to those who countenance or defend them as heretics and, in view of the heresy, provided it be a positive and efficacious assistance.

(2) "All those who knowingly read, without permission of the Apostolic See, books by these same apostates and heretics and, on imitating heresy, place such books of any authors whomsoever specifically prohibited by Letters Apostolic, and all who keep, print, or in any way defend these same books." After heretical persons come heretical books. The act that incurs excommunication is, first, reading done to a considerable extent and culpably, i.e. by one who knows the nature of the books and of the excommunication, and who, moreover, has not the necessary permission. The secondary acts punishable with the same penalty are the keeping in one's possession, the printing (rather the publishing), and, finally, the defence, by word or by writing, of the books in question. These books are of two kinds: first, those written by apostates and heretics, and which uphold and commend heresy, and such second, books specially condemned, i.e., by mention of their titles, not by decree of the Index, but by Letters from the pope himself, Bulls or Briefs, and under pain of excommunication (for a list of these books see Hilgers, "Der Index der verbotenen Bücher", Freiburg, 1904, p. 90; and "Die Büchervorlese in Papstbüchern", Freiburg, 1909).

(3) "Schismatics and those who elude or obstinately withdraw from the authority of the reigning Roman pontiff." The schismatics here referred to are of two kinds: those who are such because they belong to separated Churches which reject the authority of the pope, and those who, being Catholics, become schismatics by reason of obstinate disobedience to the authority of the pope as such.

(4) "All those, of no matter what state, rank, or condition, who appeal from the ordinances or mandates of the reigning Roman pontiff to a future ecumenical council, and all who have given aid, counsel, or countenance to this appeal. The appeal from the commands of the pope to a future ecumenical council, not only implies the superiority of the council over the pope, but also the absolute disobedience to the Head of the Church. Were this appeal efficacious it would render all church government impossible, unless it be accepted that the normal state of the Church is a general council in perpetual session, or at least meeting at short intervals. This extreme Gallicanism is justly punishable with excommunication. The theory is unfounded, and every kind of appeal, whether by a council, or by a synod or other body, or by private individuals, however enlightened and elevated in thought, is utterly contradictory, and, as such, is on pain of excommunication. This excommunication, however, is to be strictly interpreted; it would not be incurred in consequence of an appeal made to a future pope, the Holy See being vacant, or to a general council actually assembled.

(5) "All who kill, mutilate, strike, seize, incarcerate, detain or pursue with hostile intent, cardinals, patriarchs, archbishops, bishops, legates or nuncios of the Holy See, or drive them from their dioceses, jurisdictions, estates, or domains, as also those who ratify these measures or further them by aid or countenance." The object of this penalty is not so much to protect the members of the clergy, like the celebrated excommunication of the canon "Sed quis sequi abolo", of which we shall speak below, but rather to safeguard the prelates or superiors in whom the Church has vested her jurisdiction. The text clearly
indicates the acts punished by excommunication, i.e. all violent attacks on the person of a prelate as such; it likewise specifies the culprits, i.e. those who perpetrate such assaults and those who are responsible for them, as also their active accomplices.

(6) "Those who directly or indirectly prevent the exercise of ecclesiastical jurisdiction, either in foro interno or in foro externo, and who, for this purpose, have recourse to the secular tribunal; or who procure or deliver the orders of this tribunal or lend it their aid, counsel, or support." The preceding article protects those who are the depositaries of jurisdiction; the present article protects the exercise of said jurisdiction. It punishes any obstacle raised against the delivery or execution of a sentence or decision of the ecclesiastical authorities. It is a question here of the power of order (petestas ordinis), which, although not really imply jurisdiction, e.g. a simple contract. Nor is it question of measures taken with prelates so as to influence them into exercising their jurisdiction in a given direction, e.g. to confer a benefice on Calixtus or withhold one from Titus; this censure is meant to punish any obstacle that really prevents action on the part of a prelate who wishes to perform an act of jurisdiction or to carry it into effect. He is directly prevented when violence is used against him; indirectly, when his subordinates are prevented from acting. The chief opposition here considered is recourse to secular and especially judicial authority. Excommunication is therefore incurred under this head by all who provoke the intervention of secular tribunals, provided such intervention actually follow; by all who deliver orders or directions intended to prevent the exercise of ecclesiastical jurisdiction; finally, by all who co-operate in these acts with aid, counsel, or support, unless under compulsion. Moralists and canonists exempt from this penalty the clerks and servants of the secular courts.

(7) "Those who directly or indirectly oblige lay judges to cite ecclesiastical persons before their tribunals, except in cases provided for by canonical agreements, also those who enact laws or decrees against the liberty or rights of the Church." The first part of this article has for its object the protection of the privileges of the ecclesiastical forum, i.e. of those ecclesiastics whose right it is to be judged by ecclesiastical tribunals. Those who, by force of law or custom, oblige lay judges to summon clerics before their tribunals in cases where this ecclesiastical privilege (privilegium fori) should be respected. But the judges themselves, who act by virtue of their office, are not excommunicated (Holy Office, 1 Feb., 1870). "Those who thus force lay judges to violate the privilegium fori are of two kinds: namely, those who actually cite ecclesiastics before lay judges, and the legislators or makers of laws detrimental to the rights of the Church. The first are not excommunicated provided they have no other means of obtaining justice, i.e. when the laws of the country in question do not recognize the aforesaid ecclesiastical privilegium fori (Holy Office, 23 Jan., 1886). There remain, then, those who act more than the second part of the article, which now affects chiefly the legislators responsible for laws and decrees against the liberty and rights of the Church.

(8) "Those who have recourse to lay power for the prevention of Apostolic Letters or Acts of any kind emanating from the Apostolic See or from its legates or delegates; those who directly or indirectly prohibit the promulgation of these acts or letters, or who, on the occasion of such promulgation, strike or terrify either the parties interested or third parties." This article should be compared with number 6 (above), from which it differs in that it protects, not all exercise of ecclesiastical jurisdiction, but that which the Holy See exercises in its official letters, it being eminently important to ensure the free communication of the faithful with Rome. The letters in question are: first, Apostolic Letters, in which the pope himself speaks, Bulls, Briefs, Eucyclics, etc.; second, the Acts of the Holy See emanating from Roman Congregations or other organs of the Curia, which constitute but one authority with the pope (Holy Office, 13 Jan., 1892); finally, the acts of the official representatives of the pope, e.g. papal legates and delegates. The excommunication considers not only Letters that contain all the burdens which ecclesiastics are bound to observe for the occasion of these Letters, strike or terrify either the beneficiaries or even third parties who take part in their publication or execution. According to the more probable opinion, excommunication is incurred even if these measures of opposition do not produce the intended results.

(9) "All falsifiers of Apostolic Letters, even in the form of a Brief, and of petitions concerning matters of grace or justice signed by the Roman pontiff, or by cardinals or vice-chancellors or those who replace them, or simply by command of the pope; also those who falsely publish Apostolic Letters, even in the form of a Brief; and finally, those who falsely sign petitions of this kind with the name of the Roman pontiff, of the vice-chancellor, or of those who replace them." Excommunication punishes what is generally known as forgery, not in all its forms, but in so far as it affects such pontifical letters or grants as are issued through the tribunals known as the "Signatura Gratiae" and the "Signatura iustitiae," i.e. whose issue papal favours purely benevolent or connected with litigation. It does not therefore apply to the offices affecting the legitimacy of grants of the Roman Congregations or of the provinces of the pope. It may be somewhat of a surprise to know that this excommunication does not include those who fabricate an entire Apostolic Letter, the definition of falsification (jusfum) meaning only a notable alteration of authentic Letters either by suppression, erasures, writing over, or substitution. Petitions addressed to the pope, a papal bull, or a special mandate, are written by the vice-chancellor, or other officers. The grant does not thereby become official, but the petition thus signed serves as a basis for the wording of Apostolic Letters (Bulls or Briefs) that actually grant the favour requested. In this process three acts are punishable with excommunication: the false signing of a petition; the falsification of Apostolic Letters, and the publication of Letters thus falsified, in order to use them.

(10) "Those who absolve an accomplice in a sin against chastity, and that even at the moment of death, provided another priest, although he be not approved for confession, can hear the confession of the dying person without serious danger of infamy or scandal." This provision applies to the famous Bull "In Cena Domini," but from the celebrated Constitution of Benedict XIV, "Sacramentum Poenitentiae" (1 June, 1741), completed by his Constitution "Apostolici muneri" (8 Feb., 1745). By these Bulls the pope, with a view to protecting the Sacrament of Penance from sacrilegious abuse, withdraws all jurisdiction from a confessor for absolving from sins against chastity which he may have committed with another person, whether man or woman; the absolution he might impart for such sin would be null, and the mere attempt to absolve would incur excommunication. The sin thus withdrawn from the jurisdiction of the confessor is any grievous exterior sin against the Sixth Commandment, but it must be such on both sides. The confessor accessory to it cannot pardon it, but,
EXCOMMUNICATION

This document contains two distinct parts. In the first it is not question of all propositions condemned by popes or councils in terms less condemnatory (e.g. rash, offensive, etc.) than the specific stigma heretical (to defend heretical propositions being heresy itself and already declared a chief cause of excommunication, see above) but only those on which the popes have specifically forbidden to be maintained under pain of excommunication late sentence. These propositions are: (a) the forty-one errors of Luther condemned by Leo X, 16 May, 1520; (b) the seventy-nine theses of Michael Balsus condemned 1 Oct., 1567, 29 Jan., 1570, and 16 March, 1611; (c) the thesis on confession and absolution condemned by Clement VIII, 20 June, 1602; (d) the twenty-eight propositions condemned by Alexander VII, 24 Sept., 1665; (e) the seventeen propositions condemned by the same pope, 18 March, 1666; (f) the sixty-five propositions condemned by Innocent XI, 4 March, 1679; (g) the sixty-eight propositions of Miguel de Molinos condemned by the same pope, 20 November, 1679; (h) the name of Luther be not pronounced; but only by Alexander VIII, 24 August, 1690; (i) the thirty-one propositions condemned by the same pope, 7 December, 1699; (k) the five propositions on duelling condemned by Benedict XIV, 10 November, 1752; (l) and finally the sixty-five Modernist propositions condemned by decree of the Holy Office, 3 July, 1907, as being such as to imperil the very life of the Catholic Church, 1907. The text of all these propositions will be found in Denzinger’s “Enchiridion Symbolorum, definitionum et declarationum”, etc. (10th ed., Freiburg, 1908), also, the last series excepted, in Pennachi’s “Comment. in Const. Apost. Sedis”, I, 168. The second part of the article aims at the abusive practice of requiring the penitent, under pain of being refused absolution, to promise in writing that he will never implicate in any crime, a dangerous practice and opposed to the conditions of secrecy under which sacramental confession is made. Benedict XIV denounced it, notably in Portugal, by the aforementioned Constitutions. It is to be noted, however, that this excommunication is not incurred by the confessor who asks for it, but only by him who teaches or maintains that this practice is permitted. Moreover, the expression “to teach or maintain” implies more than merely to affirm or share the condemned opinions.

(2) Those who, at the instigation of the devil, violently lay hands on ecclesiastics or religious of either sex, exception being made, as regards reservation, from the temporal and spiritual possessions of such persons, do not allow the bishop or others to absolve. This is the celebrated privilege or immunity “of the canon” (privilegium canonicum), so called from the canon “Si quis, suadente diabo” (Decretum of Gratian, C. xvii, q. iv, c. xcvii), enacted by the Council of Lateran in 1139 and intended to protect the honour of the clergy from personal violence, no less from pecuniary loss. Persons protected are all who belong to the clergy in the broad sense of the word, i.e. both minor and major clerics, tonsured persons, monks, nuns, novices, and even tertiaries living in community. This privilege is to be interpreted broadly. The acts punished are all injuries corporal violence, such as blows and wounds, a fortnight mutilation; also pursuit, imprisonment, and all restraint, likewise the use of violence in any way. The penalty is not imposed for acts that are not grievous, for verbal injuries, for excusable violence, e.g. in the case of legitimate defence, or finally when one is unaware that he is dealing with a cleric. Nowadays only the real perpetrators of these deeds are excommunicated, not accomplices nor those who are merely suspected of being guilty. And even the culprits are vitand even without being denounced by name. Absolution from this excommunication is regularly reserved to the pope, but the text of the
article maintains the faculties possessed by bishops and others, such as we have heretofore indicated.

(3) "Those who fight duels, they should challenge or accept challenge thereunto, all accomplices, all who help or countenance such combats, all who designedly assist thereat, finally all who permit duelling or who do not prevent it so far as lies in their power, no matter what their rank or dignity, be it royal or imperial." This severe discipline against duelling dates from the Council of Trent (1563), De ref.; here, however, only the excommunication in question is considered. It aims at duelling, properly so called, by challenge and on accepted conditions, not at other single combats or altercations. University duels, so common in Germany, are included (8 Cong. of the Council, 29 Aug., 1890). The malice of the duel lies in the fact that it makes right depend upon the fate of arms; this penalty is extended to all who take any part whatever in these detestable combats. The excommunication is incurred, first, by the duellists themselves, not only when they actually fight, but as soon as they have proposed or accepted a challenge; next, by the official witnesses or seconds, also by physicians expressly brought upon the scene (Holy Office, 28 Oct., 1610), or persons present; likewise by those who permit these affairs, when such permission is necessary, e.g. in the army, and by those who, although able to prevent duelling, refrain from so doing.

(4) "Those who become members of the Masonic sect, of the Carbonari, or of other similar sects that plot either openly or secretly against the Church or legitimate authorities, who also teach or who permit others in any way whatever, and finally, all who do not inform against the occult chiefs or leaders, i.e., until they have made such denunciations." Certain associations are prohibited because of their evil or dangerous object; this article deals only with those to which it is forbidden to belong under pain of excommunication later, or of their being known, i.e., to plot against the Church or legitimate authorities, obviously by illicit or criminal means; this excludes at once purely political groups. It matters little whether or not these societies exact secrecy from their members, though the element of secrecy constitutes an unfavourable presumption. The article names two of these sects, the Freemasons and the Carbonari, but these may be multiplied as in any way whatever, and finally, all who do not inform against the occult chiefs or leaders, i.e., until they have made such denunciations.

(5) "Who command the violation of or who themselves rashly violate the immunity of ecclesiastical asylum. Immunity, or right of sanctuary, protected criminals who took refuge near the altar or within sacred edifices; it was forbidden to them from such places of refuge either by public or private force. This immunity, although formerly beneficial, has disappeared from modern life; the excommunication here retained has hardly more than the value of a principle; it may be noted that the article is cautiously worded. By its terms excommunication would be incurred only by those who

[Note: The text continues with a long list of specific prohibitions and penalties, including the sanctions for various offenses such as simony, simonia confidentialis, and other breaches of ecclesiastical law.]

V.—41
EXCOMMUNICATION

(14) "Religious who, without permission of the parish priest, venture to administer extreme unction or the Eucharist as Viaticum, to ecclesiastics or laymen, except in cases of necessity." The penalty affects religious with solemn vows and professed, but is not incurred if they have at least the presumed permission of the parish priest, if they be in ignorance, finally if it be a case of necessity. Those to whom these religious must not administer the sacraments are seculars, ecclesiastics or laymen; they may, however, administer to persons domiciled in their convents.

(15) "Without explicit express permission, take relics from the cemeteries or catacombs of Rome or its territory, and those who give such persons aid or countenance." The permission is to be sought from the Roman Vicariate, and excommunication is incurred only by carrying away from the catacombs genuine relics, not other objects. Relics are the remains, not of anyone happening to be buried in the catacombs, but only of martyrs or of those regarded as such by reason of the "signs of martyrdom" that distinguish their tombs, notably the phial of blood, according to the Sacred Congregation of Rites, 10 April, 1668, and 27 Nov., 1863.

(16) "Those who hold communion in criminal crime with a person whom the pope has excommunicated by means of censures and orders, or give them aid or countenance." The "criminal crime" (crimen criminis) is the very one for which the culprit was excommunicated; the article, of course, does not contemplate participation in the offensive act itself, since excommunication by name is necessarily posterior to such an act. The penalty is inflicted for subsequently assisting or countenancing the excommunicated person, be it without or with legitimate permission. It must be noted that this censure is not imposed for intercourse with all excommunicated persons, but only with vitandi, those whom the pope has excommunicated by name, not such as have been excommunicated by a Roman Congregation (Holy Office) or the Congregation of Rites, 19 Nov., 1927.

(17) "Clerics who knowingly and wilfully hold communion in divinis with persons whom the pope has excommunicated by name and receive them at Divine service." The excommunicated in question are the same as in the preceding article, and they cannot be admitted to Divine worship; however, the penalty incurred concerns ecclesiastics only, when acting freely and without knowledge [see above, (c)].

(c) Excommunications Reserved to the Bishop (Ordinary).—These are three in number and affect the following persons:

1. "Ecclesiastics in Holy orders and regulars or nuns who dare to contract marriage after having made a solemn vow of chastity, also those who dare to contract marriage with one of these persons." The ecclesiastics whose marriage is null in consequence of the impediment of Holy orders are subdeacons and those in still higher orders; the nuns and male religious whose marriage is null through the impediment of vow are members of the great orders. Nevertheless, the impediment does not exist from the time of their first profession that follows the novitiate, but only from the solemn profession made three years later. The penalty is incurred by an attempt at marriage, not by an act of betrothal; such an attempt is recognized in any contract having the figura matrionii, i.e. which would constitute a marriage if there were no impediment; consequently the penalty is incurred for civil marriage (Holy Office, 22 Dec., 1880), even for the impediments, e.g. consanguinity (Holy Office, 16 Jan., 1892).

2. "Those who efficaciously procure abortion." The fruitless attempt is not punished with excommunication; authors do not agree as to whether the woman guilty of self-abortion is excommunicated.

3. "Those who knowingly make use of counterfeit Apostolic Letters or who co-operate in the crime." [See above, (a) (9).] This article is not directed against forgers but against those who endeavor to profit by falsified letters. Petitions signed by the pope or in his name are not mentioned. Accomplices are also punished; but the culprits must act knowingly, and be fully aware that they are using falsified papal letters.

(d) Excommunications That Are Not Reserved (Semi-Reservata).—These are four in number and are pronounced against the following persons:

1. "Those without explicit permission of ecclesiastical burial to notorious heretics or to persons excommunicated by name or placed under interdict." The article does not consider funeral ceremonies, but only material interment in consecrated ground. Those who admit heretics or others to ecclesiastical burial are not punished, but only those who, by authority or force, compel such an interment, thereby violating the regulation of the place. Nor is it question here of all who, according to the Ritual, should be deprived of ecclesiastical burial, but merely of the two categories indicated.

2. "Those who wound or terrorize the inquisitors, informers, witnesses, or other ministers of the Holy Office; those who lose or burn the writings of this most holy and sacred Holy Office; those who hinder it from giving counsel, or countenance." This excommunication does not apply in countries where the Holy Office has no organized tribunal; the inquisitional functions devolve in such countries on the bishop, who is protected by the specially reserved excommunications described above, under (a) (5), (6), (8).

3. "Those who alienate and those who have the audacity to receive church property without Apostolic authorization, according to the terms of the Constitution 'Ambitiose, de rebus eccl. non alienandis.'" The author of this Constitution (Extravagantes, lib. III, tit. iv, inter comm.) was Paul II (1 March, 1467). It forbids under pain of reserved excommunication and of the nullity of the acts, not only alienations (very similarly called) of ecclesiastical property, gifts, donations, etc., but also all contracts favouring of alienation, such as mortgages, emphyteusis or perpetual lease, long-term leases, etc. For the manifest benefit of the Church these contracts must be authorized by the pope; only objects of small value are excepted (see Third Plenary Council of Baltimore, no. 2).

4. "Those who, through their own fault, neglect or omit to denounce within a month the confessors or priests by whom they have been solicited to immodest acts, in all the cases set forth by our predecessors Gregory XV in the Constitution 'Universi' (28 Aug., 1622) and Benedict XIV in the Constitution 'Sacramentum poenitentiae' (1 June, 1741)." This excommunication is not intended to punish those solicited to sin (they are not therefore guilty), but to protect the administration of the Sacrament of Penance. Persons thus solicited are strictly obliged to make known to the inquisitor or the bishop those priests who have solicited them to the aforesaid acts; if, through their own fault, such denunciation is not made within a month they incur excommunication, which ceases only when they have made known in the presence of the guilty party the solicitation here alluded to is not any provocation to evil, but to sins against chastity on the part of confessors or priests, and in connexion with the Sacrament of Penance, this being the abuse that the legislator especially seeks to punish. Said connexion exists when the solicitation takes place "during the very act of sacramental confession, immediately before or after, on the occasion or under the pretext of confession, or finally, in the confessional!"
ply reserved to the pope and the other seven non-
reserved:—
(1) Sess. XXII, c. ii, De ref.: against usurpers, whether ecclesiastics or laymen, of any kind of church property, until the time of restitution and absolution. This penalty protects all ecclesiastical property, properly so called, i. e. of which the administration belongs to ecclesiastical authority, such as real and personal property acquired by ecclesiastics, or by others, by will or by gift, or as oblations, or by other means. It is incurred by usurpers, namely by those who claim for themselves the ownership of this property, and passes on to the successive acquirers of such property until restitution or composition (agreement) is made. This penalty was applied at the time of the recent spoliations in Italy and France.
(2) Sess. XXI, De reg. et usu sacerrum librorum.
The excommunication pronounced by the council was restricted by the Constitution "Apostolica Sedis" to those who, without the approbation of the bishop, print, or have printed, books treating of sacred things; this must here be understood solely of the text of Holy Writ and of notes and commentaries on the same (Holy Office, 22 Dec., 1580).
(3) Sess. XXIV, c. vii, De ref. matr.: against those who are guilty of the crime of abduction, in regard to any woman, with a view to marriage, and all who lend them advice, aid, or countenance.
(4) Sess. XXIV, c. ix, De ref. matr.: against temporal rulers and magistrates who directly or indirectly oppose obstacles to the liberty of their subjects in the matter of marriage.
(5) Sess. XXV, c. v, De regul.: against secular magistrates who at the request of the bishop, do not give the support of the secular arm in re-establishing the clausura or enclosure of nuns. This excommunication is abrogated in practice or at least is inapplicable.
(6) Sess. XXV, c. xviii, De regul.: against those who unjustly oblige a woman to enter a monastery unless she shall first take her vows, that is, make a profession, and those who thereunto give their counsel, aid, or countenance, as also against those who, without good reason, prevent a woman from taking the veil or making her profession.
(7) Sess. XXV, c. i. De ref. matr.: against "those who deny that clandestine marriages [before the legislation of the council] are true and valid," as also those who forbid marriages contracted by the children of a family without the consent of their parents are invalid and that parents can make such marriages valid or invalid."
(8) Sess. XIII, can. xi: "This council ordains and declares that sacramental confession, when a confessor may be had, is of necessity to be made before Communion by those whose conscience is burdened by mortal sin, how contrite soever they may think themselves. But if anyone shall presume to teach, preach, or obstinately to assert, or even in public disputation to defend the contrary, he shall be thereupon excommunicated."
C. Excommunications Pronounced or Renewed Since the Constitution "Apostolica Sedis". These are four in number, the first two being specially reserved to the pope, the third to the ordinary; the fourth is non-
reserved:
(1) The Constitution "Romani Pontifex" (28 Aug., 1673), besides other penalties, declares specially reserved excommunication: first, against the dignitaries and canons of cathedral churches (or those having the administration of vacant cathedrals) who would dare to conceal and transfer the administration of their church with the title of vicar to the person elected by the chapter, or named or presented to said church by lay power; second, against those so elected or presented; and third, against all who aid, advise, or countenance the aforesaid offenders.
(2) Excommunication specially reserved against the members of the "Catholic Italian Society for the restoration of the rights of the Christian and especially of the Roman people"; and against its promoters, supporters, and adherents (S. Peniten., 4 Aug., 1876; Acta S. Sed., IX, 352). Amongst other rights this society proposed to restore popular participation in the election of the sovereign pontiff.
(3) Excommunication reserved to the ordinary against laymen (for ecclesiastics the penalty is suspension) who trade in Mayence with profane booksellers, or publish books and other merchandise (S. Cong. of the Council, decree "Vigilanti studio," 25 May, 1893).
(4) Excommunication, non-reserved, against missionaries, both regulars and seculars, of the East Indies (Farther Orient) or the West Indies (America) who devote themselves to commerce or who participate in the manufacture or sale of intoxicating liquors, or who publish or cause to be printed, or aid in their manufacture, or sell, or who publish, or cause to be printed, or aid in their manufacture, or sell, or who publish, or cause to be printed, or who aid or countenance, the production of spirits or other intoxicating liquors, or who aid or countenance, the production of spirits or other intoxicating liquors.
Exeat. See Incardination.
Exsecracion, same as Desecration (q. v.).
 Executor. Apostolic, a cleric who puts into execution a papal rescript, completing what is necessary in order that it be effective. The executor of a rescript may be discovered from the tenor of the document itself. In matters which regard the government of regulars, the executor of Apostolic Letters is the superior of the order, namely, the general, the procurator general, or the provincial. Rescripts containing favours are sometimes granted by the Holy See directly to the petitioners; in which case, the executor merely has the office of executing the favour asked for, without any obligation of judicial inquiry into the opportunity of the grant, or the reasons alleged for seeking it. Nevertheless, if it is notorious that the favour has been surreptitiously obtained, he must abstain from executing the rescript till the party be convicted on oath or mandate. The Apostolic Letters must first of all be in his hands before he may act; from them he determines whether he is the one delegated, and what are his powers. He must verify the force of the reasons alleged for granting the request, as well as the truth of other statements found in the petition. As a delegate of the Holy See he may, ordinarily, subdelegate another to execute the rescript, unless this is expressly
forbidden in the grant, or unless it is apparent that he is selected by reason of his knowledge or other personal qualities specially fitting him for that office. It is important to know whether an executor is chosen for his personal characteristics, or on account of his office: in the former case the delegation is personal, in the latter it is attached to the position, and passes on to the successor of the same office. A rescript given to the ordinary may likewise be executed by the vicar general. An executor must know the rules for interpreting rescripts when they are rendered void because surreptitiously obtained or for other cause.

Rescripts emanating from the Sacred Penitentiary are executed in the confessional, and are then destroyed by the confessor, as they treat of matters of conscience. When the rescript pertains to the external forum, a decree should be drawn up to the effect that all necessary formalities have been observed in its execution; these formalities should be specified. No fee is allowed for the execution of Apostolic Letters, lest the executor's judgment be influenced thereby.

ANDREW B. MEEHAN.

EXEGETA.—A semicircular stone or marble seat; a rectangular or semicircular recess; the portico of the Greco-Latins, or gymnasion, in which disputations of the learned were held among the ancients; also, in private houses, the parastaos, or vestibule, used for conversation. The term is sometimes applied to a porch or chapel which projected from the larger building. Also used, as synonymous with cathedra, for a throne or seat of any kind; for a small private chamber; the space between an oriel window and the small chapels between the buttresses of a large church or cathedral.

THOMAS H. POOLE.

Exegesis (BIBLICAL) is the branch of theology which expresses and expresses the true sense of Sacred Scripture. The exegete does not inquire which books constitute Sacred Scripture, nor does he investigate their genuineness, nor, again, does he study their double authorship. He accepts the books which, according to the present teaching of the ecclesiastical authority, belong to the Canon of Sacred Scripture. Obedient to the decree of the Council of Trent, he regards the Vulgate as the authentic Latin version, without neglecting the results of sober textual criticism, based on the readings found in the other versions approved by Christian antiquity, in the Scriptural citations of the Fathers, and in the more ancient manuscripts. With regard to the authorship of the Sacred Books, too, the exegete follows the authoritative teaching of the Church and the prevalent opinions of her theologians on the question of Biblical inspiration.

Not that these three questions concerning the Canon, the genuine text, and the inspiration of Sacred Scriptures exert no influence on Biblical exegesis; but the exegete, at least, is not so much concerned with the subject of exegesis as all; only the best supported readings of its text will be made the basis of its theological explanation; and the doctrine of inspiration with its logical corollaries will be found to have a constant bearing on the results of exegesis. Still, exegesis, as such, does not deal with these three subjects; the reader will find them treated in the articles Canon of the Holy Scriptures; Criticism, Biblical; subtitle: Criticism, Textual; and Inspiration.

The early Reformers were wont to claim that the genuine text of the inspired and canonical books is self-sufficient and clear. This contention does not owe its origin to the sixteenth century. The words of Origen (De principiis, IV), St. Augustine (De doctr.

christ., I-III), and St. Jerome (ad Paulinum, ep. liii, 6, 7) show that similar views existed among the scholars and the early ecclesiastical writers. The doctrine of inspiration flowing from the supposed clearness of the Bible may be inferred from the fact that one century after the rise of the Reformation Bossuet could give to the world two volumes entitled, "A History of the Variations of the Protestant Churches"); A Protestant theologian, S. Werenfels, sets forth the same truth in a following epigram—

He bides best in quo querit sua domnata quisque.

Invenit et pariter domnata quisque sua,

which may be rendered in an English paraphrase:

Men ope this book, their favourite creed in mind;

Each seeks his own, and each his own doth find.

Agreeing with the warning of the Fathers, Pope Leo XIII, in his Encyclical "Providentissimus Deus", insisted on the difficulty of rightly interpreting the Bible. "It must be observed", he wrote, "that in addition to the usual reasons which make ancient writings more or less difficult to understand, there are some which are peculiar to the Bible. For the language of the Bible is employed to express, under the inspiration of the Holy Ghost, many things which are beyond the power and scope of the reason. Many things that is to say, Divine mysteries and all that is related to them. There is sometimes in such passages a fullness and a hidden depth of meaning which the letter hardly expresses and which the laws of grammatical interpretation hardly warrant. Moreover, the literal sense itself frequently admits other senses, adapted to illustrate dogma or to confirm morality. Wherefore, it may be recognized that in every case there are two, or perhaps more, senses in a certain religious obscurity, and that no one can enter into their interior without a guide; God so disposing, as the Holy Fathers commonly teach, in order that men may investigate them with greater ardour and earnestness, and that what is attained with difficulty may sink more deeply into the mind and heart; and, most of all, that they may understand that God has delivered the Holy Scriptures not only that in reading and making use of His word, they must follow the Church as their guide and their teacher."

But it is not our purpose so much to prove the need of Biblical exegesis as to explain its aim, describe its methods, indicate the various forms of its results, and outline its history. Exegesis aims at investigating the sense of the text; its history is contained in the rules of interpretation; its results are expressed in the various ways in which the sense of the Bible is wont to be communicated; its history comprises the work done by Christian and Jewish interpreters, by Catholics and Protestants. We shall endeavour to consider these various elements under the four heads:

I. Sense of Sacred Scripture; II. Hermeneutics; III. Sacred Rhetoric; IV. History of Exegesis.

I. Sense of Sacred Scripture.—In general, the sense of Sacred Scripture is the truth actually conveyed by it. We must well distinguish between the sense and the signification of a word. A good dictionary will give us, in the case of most words, a list of their various possible meanings or significations; but no reader will be tempted to believe that a word has all these meanings. If the text of Scripture contains or some other restrictive element will determine the meaning in which each word is used in any given passage, and this meaning is the sense of the word. The signification of the word is its possible meaning; the sense of a word is its actual meaning in any given context. A sentence, like a word, may have several possible significations, but it has only one sense or meaning intended by the author. Here, again, the signification denotes the possible meaning of the sentence, while the sense is the meaning which the sentence here and now conveys. In the case of the Bible, it must be kept in mind that God is its author, and that God, the Sovereign Lord of all things, can manifest truth not
merely by the use of words, but also by disposing outward things in such a way that one is the figure of the other. In the former case we have the literal sense; in the latter, the typical (cf. St. Thomas, Quodli., vii, Q. vi, a. 14).

(i) Literal Sense.—(i) What is the Literal Sense?—The literal sense of Sacred Scripture is the truth really, actually, and immediately intended by its author. The fact that the literal sense must be really intended by the author distinguishes it from the truth conveyed by any mere accommodation. This latter applies a writer's language, on the ground of analogy, to something not originally meant by him. Again, since the literal sense is actually intended by the writer, it differs from the meaning conveyed only virtually by the text. This means that the author must be understood literally, in the sense that he may draw a number of logical inferences from the writer's direct statements; the resultant information is in neither case originally intended by the writer, but it constitutes the so-called derivative or consequent sense. Finally, the literal sense is limited to the meaning immediately intended by the writer, so that the truth mediatly expressed by him does not fall within the range of the literal sense. It is precisely in this point that the literal sense differs from the typical. To repeat briefly, the literal sense is not an accommodation based on similitude or analogy; it is not a mere inference drawn by the reader; it is not an antitype corresponding to the immediate contents of the text as its type; but it is the meaning which the and in its proper, its figurative, and its literal sense respectively. He may, therefore, with impunity deny the existence of any bodily sense in a passage of Scripture without injury to its literal sense. But it is more generally admitted that Origen went astray on this point, because he followed Philo's opinion too faithfully.

(ii) Division of the Literal Sense.—What has been said about the immediate character of the literal sense must not be misconstrued in such a way as to exclude figurative language from it. For its literal meaning is a single, not a double, sign of the truth it conveys. When we speak of "the arm of God", we do not imply that God really is endowed with such a bodily member, but we directly denote his power of action (St. Thomas, Summa, I, Q. i, a. 10, ad 3). This principle applies not merely in the metaphor, the synecdoche, the metonymy, or the irony, but also in those cases where the literal sense of the word is used in a wider sense or even an entire chapter or book. The very name allegory implies that the real sense of the expression differs from its usual verbal meaning. In Matt., v, 13 sqq., e.g., the sentence, "You are the salt of the earth", etc., is not first to be understood in its nonfigurative sense, and then in the figurative; it does not first class the Apostles among the mineral kingdom, and then among the social and religious reformers of the world, but the literal sense of the passage coincides with the truth conveyed in the allegory. It follows, therefore, that the literal sense comprises both the proper and the figurative. The fable, the parable, and the example must also be classed among the allegorical expressions which signify the intended truth in a metaphorical sense. It is true that in the passage according to which the trees elect a king (Judges, ix, 6—21), in the parable of the prodigal son (Luke, xv, 11 sqq.), and in the history of the Good Samaritan (Luke, x, 25—37) a number of words and sentences are required in order to construct the fable, the parable, and the example respectively; but this does not interfere with the literal or immediate sense of the literary devices. As such they have no meaning independent of, or prior to, the moral lesson which the author intends to convey by their means. It is easily granted that the mechanical contrivance we call a watch immediately indicates the time in spite of the subordinate action of its spring and wheels; why, then, should we question the truth that the literary device called fable, or parable, or example, immediately points out its moral lesson, though the very existence of such a device presupposes the use of a number of words and even sentences?

(iii) Ubiquity of the Literal Sense.—The Fathers of the Church were not blind to the fact that the literal sense in some Scripture passages appears to imply great incongruities, not to say insuperable difficulties. On the other hand, they regarded the language of the Bible as holy human language, and therefore always endowed with a literal sense, whether proper or figurative. Moreover, St. Jerome (in Is., xiii, 19), St. Augustine (De tent. Abruth. serm., ii, 7), St. Gregory (Morali, i, 27) agree with St. Thomas (Quodli., vii, Q. vi, a. 14) in his conviction that the typical sense is always based on the literal and springs from it. Hence if these Fathers had denied the existence of the literal sense, they would have left the passage meaningless. Where the patristic writers appear to reject the literal sense, they really exclude only the proper sense, leaving the figurative. Origen (De prine., IV, xi) may be regarded as the only exception to this rule; since he considers some of the Mosaic laws as either absurd or impossible to keep, he denies that they must be taken in their literal sense. But even in his case, attempts have been made to give to his words a more acceptable meaning (cf. Vincezzi, "In S. Gregorii Nysseni et Origenis scripta et doctrinam nova recensio", Rome, 1684, vol. ii, cc. xxv—xxxi). The great Alexandrian Doctor distinguishes between the body, the soul, and the spirit of Scripture. His defenders believe that he understands by these terms every literal, every figurative, and every typical sense respectively. He may, therefore, with impunity deny the existence of any bodily sense in a passage of Scripture without injury to its literal sense. But it is more generally admitted that Origen went astray on this point, because he followed Philo's opinion too faithfully.

(b) Actual Occurrence of a Multiple Literal Sense.—The subject becomes more complicated if we ask whether a multiple literal sense is not merely possible but is actually found anywhere in Scripture. There is no good authority for its frequent occurrence; but it does really exist even in the few Scripture passages which seem to contain it, such as Ps. ii, 7; Is., lii, 4, 3; Dan., ix, 27; John, xi, 51; ii, 19. Did God wish in these texts to convey a multiple literal sense? Revelation, as coming down to us in Scripture and tradition, furnishes the only clue to the solution of the question.
(a) Arguments for the Multiple Literal Sense. — The advocates of a multiple literal sense advance the following arguments for their view: First, Sacred Scripture supposes its existence in several passages. Thus Heb., i, 3, understands Is. ii, 7 (this day have I begotten thee), of the Divine generation of the Son; Acts, xiii, 33, understands the text of the Resurrection; Heb., v, 5, of the eternal priesthood of Christ. Again, the Latin Vulgate and the Septuagint, together with I Pet., ii, 24, understand Is. liii, 4 (he hath borne our infirmities), of our sins; Matt., viii, 17, understands the words of our bodily ailements. And again, I Mach., i, 57, applies some words of Dan., ix, 27, to the subject of the temple, as a prophecy to be fulfilled in the destruction of the Holy City. Finally, John, ii, 19, was understood by the Jews in a sense different from that intended by Jesus Christ; and John, xi, 51, expresses two disparate meanings, one intended by Caiphas and the other by the Holy Ghost. The second argument is, that tradition too upholds the existence of a multiple sense in several passages of the Bible. Its witnesses are St. Augustine (Cont., xii, xxvi, xxx, xxxi; De doctr. christ., iii, xxvii, etc.), St. Gregory the Great (in Ezech., iii, 13, Lib. I, hom. x. n. 30 sq.), St. Basili, St. Chrysostom, St. Jerome, St. Bernard, and, among the Scholastics, St. Thomas (I, q. I, a. 10; “De potent.,” I, 4, in II sent.”; dist. xii, q. 1, a. 2, ad 3., Card., Can., and several other scholastics, 6, 10). Matthew Poole (Loc. cit., Lib. II, c. xi, ad 7 arg., ad 3 rat.), Baezus (ad I, q. i, a. 10), Sylvius (ad id. id.), John of St. Thomas (I, q. i, disp. ii, n. 12), Billuart (De reg. fidei, dissert. i, a. 8), Vasquez, Valentia, Molina, Serrarius, Cornelius a Lapide, and others.

(b) Reasons against the Multiple Literal Sense. — Paul of Tarsus, St. Ambrose, Lanfranc, Cornely, Kuenenbauer, Reimayr, and the greater number of recent writers deny the actual existence of a multiple literal sense in the Bible; they urge the following reasons for their opinion: First, the Bible is written in human language; now, the language of other books usually presents only one literal sense. Second, the genuine sense of Sacred Scripture must be discovered by means of the rules of hermeneutics. A commentator would render these rules meaningless, if he were to look for a second literal sense of a passage after discovering one true meaning by their means. Third, commentators implicitly assume that any given text of Scripture has only one literal sense; for after finding out the various meanings which are philologically probable, they endeavour to ascertain in which of them was intended by the Holy Ghost. Fourth, the genuine sense is not a sense which creates equivocation and confusion in the Bible. Finally, the multiple sense in Scripture would be a supernatural fact wholly depending on the free will of God. We cannot know it independently of revelation; its actual occurrence must be solidly proved from Scripture or tradition. The patrons of the multiple literal sense have added the following arguments: (1) Where Scripture appeals to disparate meanings of the same passage, it does not necessarily consider each of them as the literal sense. Thus Heb., i, 5, may represent Ps. ii, 7, as referring literally to the eternal generation, but Acts, xiii, 33, may consider the Resurrection; and Heb., v, 5, the eternal priesthood of Christ as necessary consequences. Matt., vii, 17, applies to the Passover the sense of being a Type of the bodily ailements; I Mach., i, 57, merely accommodates some words of Dan., ix, 27, to the writer’s own time; in John, ii, 19, and xii, 51, only the meaning intended by the Holy Ghost is the literal sense, though this may not have been understood when the words in question were spoken. (2) The testimony of the Fathers and the Scholastics to the contrary sense is not sufficient to prove the existence of a dogmatic tradition as to the actual occurrence of the multiple literal sense in Scripture. There is no trace of it before the time of St. Augustine; this great Doctor proposes his view not as the teaching of tradition, but as a pious and probable opinion. The expressions of the other Fathers, excepting perhaps St. Gregory the Great, urge the depth and weight of thought contained in Scripture, or they refer to meanings which we technically call its typical, derivative, or consequent sense, and perhaps even to mere accommodations of certain passages. Among the Scholastics, St. Thomas follows the opinion of St. Augustine, at least in one of the alleged passages (De potent., IV, 1), and a number of the later Scholastics follow the opinion of St. Thomas. The other early Christians, however, who profess a multiple sense, may be seen in St. Bonaventure (IV Sent. dist. xxi, p. 1, dub. 1) and Alexander of Hales (Summa, I, Q. i, m. 4, a. 2).

(v) The Derivative or Consequent Sense. — The consequent or derivative sense of Scripture is the truth legitimately inferred from its genuine meaning. It would be wrong to identify the consequent sense with the more latent literal sense. This depth of the literal sense may spring from the fact that the predicate changes somewhat in its meaning if it be applied to totally different subjects. The word wise has one meaning if predicated of God, and quite another if predicated of created beings. Such a variety of meaning belongs to the literal meaning in the strict sense of the term. Thus, the same word may not be the conclusion of a syllogism of one whose premises is a truth contained in the Bible. Such inferences can hardly be called the sense of a book written by a human author; but God has foreseen all the legitimate conclusions derived from Biblical truths, so that they may be said, in a certain way, to be His intended meaning. The Bible itself makes use of such inferences; as if there were a prophecy of a Paul (I Cor., i, 31) quotes such an inference based on Jer., ix, 23, 24, with the express addition, “as it is written”; in I Cor., ix, 10, 11, he derived the consequent sense of Deut., xxv, 4, indicating the second promise, while in I Tim., v, 18, he states the consequent sense of the same passage without adding the second promise. Theologians and ascetical writers have, therefore, a right to utilize dogmatic and moral inferences from the genuine sense of Sacred Scripture. The writings of the Fathers illustrate this principle most copiously.

(vi) Accommodation. — By accommodation the writer’s words are applied, on the ground of analogy, to something not originally meant by him. If there be no analogy between the objects, then it could not be accommodated; there is no accommodation of the passage, but rather a violent perversion of its true meaning; such a contorted meaning is not merely outside, but against, the genuine sense. Accommodation is usually divided into two classes: extensive and allusive. Extensive accommodation takes the words of the Bible in their genuine sense, but applies them to another subject. Thus the words, “he was found perfect, and in the time of wrath he was made a reconciliation,” which Eclesius, xlv, 17, predicates of Noe, are often applied to other saints. Allusive accommodation does not employ the words of Scripture in their genuine sense, but gives them an entirely different meaning; here the analogy does not exist between the objects, but the meaning is such that the words are employed, with the innocent man thou wilt be innocent; and with the elect thou wilt be elect: and with the perverse thou wilt be perverted,” expresses originally the attitude of God to the good and the wicked; but by accommodation these words are often used to show the influence of companionship. That the use of accommodation is legitimate, may be inferred from its use in Scripture, in the writings of the Fathers, and from its very nature. Examples of accommodation in Scripture may be found in Matt., vii, 23 (cf. Ps. vi, 9), Rom,
EXEGESIS

x., 18 (cf. Ps. xviii, 5); II Cor., xvi, 13 (cf. Ex. xvi, 18); Heb., xii, 5 (cf. Jos., i, 9); Apoc., xi, 4 (cf. Zech., iv, 14). The liturgical books and the writings of the Fathers are so replete with the use of accommodation that it is needless to refer to any special instances. Finally, there is no good reason for interdicting the proper use of accommodation, seeing that it is not wrong in itself and that its use does not involve any inconvenience as far as faith and morals are concerned. But two excesses are to be avoided: first, it cannot be maintained, that all the citations from the Old Testament are to be taken as literal. Similar contentions are found in the writings of those who endeavour to destroy the value of the Messianic prophecies; they are not confined to our days, but date back to Theodore of Mopsuestia and the Socinians. The Fifth Ecumenical Synod rejected the error of Theodore; besides, Christ Himself (Matt., xxvi, 37 sq.; cf. Ps. cix, 1), St. Peter (Acts, iii, 25 sq.; cf. Gen., xii, 3; xviii, 15; xxii, 15), and St. Paul (Heb., i, 5; v. 5; Acts, xiii, 33; cf. Ps. ii, 7) base theological arguments on Old-Testament citations, so that these latter cannot be regarded as mere accommodations. Secondly, we must not exceed the proper limits in the use of accommodation. This we should do, if we were to present the meaning derived from accommodation, and mainly from the single citation as we were to use it as the premise in an argument, or again if we were to accommodate the words of Scripture to ridiculous, absurd, or wholly disparate subjects. The fourth session of the Council of Trent warns most earnestly against such an abuse of Sacred Scripture.

Typical Sense.—The typical sense has its name from the fact that it is based on the figurative or typical relation of Biblical persons, or objects, or events, to a new truth. This latter is called the antitype, while its Biblical correspondent is named the type. The typical sense is also called the spiritual, or mystical, sense: mystical, because of its more recondite nature; spiritual, because it is related to the literal, as the spirit is related to the body. What we call type is called shadow, allegory, parable, by St. Paul (cf. Rom., v, 14; I Cor., x, 6; Heb., viii, 5; Gal., iv, 21; Heb., ix, 9), once he refers to it as antitype (Heb., ix, 24), though St. Peter applies this term to the truth signified (I Pet., iii, 21). Various other designations for the typical sense have been used by the Fathers of the Church; but the following questions are the three most important:

(i) Nature of the Typical Sense.—The typical sense is the Scriptural truth which the Holy Ghost intends to convey really, actually, but not immediately. Inasmuch as its meaning is really conveyed, the typical sense differs from accommodation; inasmuch as its meaning is actually expressed, it differs from the consequent sense; inasmuch as its meaning is not immediately signified, it differs from the literal sense. While we arrive at the latter immediately by way of the literal expression, we come to know the typical sense only by way of the literal. The text is the sign conveying the literal sense, but the literal sense is the sign expressing the typical. The literal sense is the type which by a special design of God is directed to signify its antitype; inasmuch as its meaning is not immediately signified, it substitutes a type: (a) It must have its own true and historical existence independently of the antitype; e.g., the intended immolation of Isaac would be an historical fact, even if Jesus Christ had not died. (b) It must not be referred to the antitype by its very nature. This prohibits the similitude from serving as a type, with account of its antecedent likeness to its object. (c) God himself must have established the reference of the type to its antitype; this excludes objects which are only naturally related to others. The necessity of these three conditions explains why a type cannot be confounded with a parable, or an example, or a symbol, or a similitude, or a comparison, or a metaphor, or a symbolic prophecy—e. g., the statue seen in the dream of Nabuchodonosor. It should be added, however, that at times the type may be expressively used by the Scriptural representation of a surmise rather than by the strict literal sense of Scripture. Gen., xiv, 18, e. g., introduces Melchisedech without reference to his genealogy; hence Heb., vii, 3, represents him “without father, without mother, without genealogy, having neither beginning of days nor end of life”, and makes him as such a type of Jesus Christ. Thus far we have not the spoken reference of a surmise by a strict sense. In a wider sense, all persons, events, or objects of the Old Testament are sometimes considered as types, provided they resemble persons, events, or objects in the New Testament, whether the Holy Ghost has intended such a relationship or not. The Egyptian Joseph is in this way frequently represented as a type of St. Joseph, the foster-father of Christ.

(ii) Division of the Typical Sense.—The division of the typical sense is based on the character of the type and the antitype. The antitype is either a truth to be believed, or a boon to be hoped for, or again a virtue to be practised. This gives us a triple sense—the allegorical, the anagogical, and the tropological, or moral. The objects of faith in the Old Testament centre, e. g., in the Paschal Lamb of the Church. The allegorical sense may, therefore, be said to refer to the future or to be prophetic. The allegory here is not to be sought in the literary expression, but in the persons or things expressed. This division of the typical sense was expressed by the Scholastics in two lines:

Littera gesta docet; quid credas, allegoria; Moralis quid agas; quo tendas, anagogia.

Jerusalem, e. g., according to its literal sense, is the Holy City; taken allegorically, it denotes the Church Militant; understood tropologically, it stands for the just soul; finally, in its anagogical sense, it stands for the Church Triumphant. If the division of the typical sense be based on the type rather than the antitype, we may distinguish: (i) literal, or literal, and (ii) rational, or legal types. They are personal if a person is chosen by the Holy Ghost as the sign of the truth to be conveyed. Adam, Noe, Melchisedech, Moses, Josue, David, Solomon, and Jonas are types of Jesus Christ; Agar with Ismael, and Sara with Isaac are respectively the types of the Old and the New Testament. The real types are certain historical persons or objects of Old Testament, such as the paschal lamb, the matrim, the water flowing from the rock, the brazen serpent, Sion, and Jerusalem. Legal types are chosen from among the institutions of the Mosaic liturgy, e. g., the tabernacle, the sacred implements, the sacraments and sacrifices of the Old Law, its priests and Levites.

(iii) The Existence of the Typical Sense.—Scripture and tradition agree in their testimony for the occurrence of the typical sense in certain passages of the Old Testament. Among the Scriptural texts which establish the typical sense, we may appeal to Col., ii, 16-17; Heb., viii, 5; ix, 8-9; Rom., v, 14; Gal., iv, 21; Matt., i, 13 (cf. Os. xi, 1); Heb., i, 5 (cf. II K., vii, 14). The testimony of tradition concerning this subject may be gathered from the patristic, and from the leaders of the Church, e. g., (cf. c. 12, etc.), St. Clement of Rome (I Cor., xii, 21), St. Justin (Dial. c. Tryph., cix, 12), St. Ireneaus (Adv. her., iv, xxv, 3; II, xxiv, 2 sq.; IV, xxvi, 2), Tertullian (Adv. Marc., v, viii), St. Jerome (Ep. liii, ad Paulin., § 5), St. Thomas (I, Q. i, a. 10), and a number of other patristic writers and Scholastic theologians. That the Jews agree with the Christian writers on that point, may be inferred from Josephus (Antiq., xvii, iii, 4; Proem. Antiq., n. 4; III, vi, 47; De bello Jud., v, vi, 4); the Talmud (Berachot, e. v., ad fin.; Quiddius, fol. 41, col. 1), and the writings of Philo (de Abraham; de migrat. Abrah. de vitâ contemp., though this latter writer goes to excess in the allegorical interpre-
tation. The foregoing tradition may be confirmed by the language of the liturgy and by the remains of Christian archaeology (Kraus, "Roma sotterranea," pp. 242 sqq.). Striking instances of the liturgical proof may be seen in the Preface of the Mass for Easter, in the Blessing of the Paschal Candle, and in the Divine Office recited on the feast of Corpus Christi. All Catholic interpreters readily grant that in some passages of the Old Testament we have a typical sense besides the literal; but this does not appear to be granted with regard to the New Testament, at least not subsequently to the death of Jesus Christ. St. Augustine is guilty of this fault in his spiritual interpretation of the thirty-eight years in John, v. 5, and of the one hundred and fifty-three fishes in John, xxi, 11. Besides, it must be kept in mind that not all the minutiae connected with the type have a definite and distinct meaning in the antitype. It would be useless labour to search for the spiritual meaning of every detail connected with the paschal lamb, e. g. or with the first Adam. The exegete ought to be especially careful in the admission of typical prophecies, and of anything that would resemble the method of the Jewish Cabalists.

(vi) The Theological Value of the Typical Sense.—Father Perrone (Prel, theol. dogm., IX, 159) believes it is the common opinion of theologians and commentators that no theological argument can be based on the typical sense. But if we speak of the typical sense which has been revealed as such, or which has been proved as such from either Scripture or tradition, it conveys the meaning intended by God not less veraciously than the literal sense. Hence it furnishes solid and reliable premises for theological conclusions. The typical sense may be deduced from the literal sense. Thus in John iv, 15 (cf. Os., xi, 1), and Heb., i, 5 (cf. II K., vii, 14). Texts whose typical sense is only probable yield only probable theological conclusions; such is the argument for the Immaculate Conception based on Est., xv, 13. If St. Thomas (Summa, i, Q. i, a. 10; Quodl., vii, a. 14, ad 4to) and other theologians differ on our present point, it must be argued that the passage is not taken from the typical sense, as may be seen in Matt., ii, 15 (cf. Os., xi, 1), and Heb., i, 5 (cf. II K., vii, 14). Texts whose typical sense is only probable yield only probable theological conclusions; such is the argument for the Immaculate Conception based on Est., xv, 13.

11. Hermeneutics.—The interpretation of a writing has for its object to find the ideas which the author intended to express. We do not consider here the so-called author's interpretation or the writer's own statement as to the thought he intended to convey. In interpreting the Bible scientifically, its twofold character must always be kept in view: it is a Divine book, in as far as it has God for its author; it is a human book, in as far as it is written by men for men. In its human character, the Bible is subject to the same rules of interpretation as profane books; but in its Divine character, it is not a Divine book, e. g. the meaning can be kept and explained, so that it needs special rules of hermeneutics. Under the former aspect, it is subject to the laws of the grammatico-historical interpretation; under the latter, it is bound by the precepts of what we may call the Catholic explanation.

(1) Historico-Grammatical Interpretation. The grammatico-historical interpretation implies three elements: first, a knowledge of the various significations of the literary expression to be interpreted; secondly, the determination of the precise sense in which the literary expression is employed in any given passage; thirdly, the historical description of the idea thus determined. What has been said in the preceding paragraphs sufficiently shows the difference between the sense of the clause and the sense of the author, whether or not the latter is well known. The importance of describing an idea historically may be exemplified by the successive shades of meaning attaching to the concept of Messias, or of Kingdom of God.

(2) Significations of the Literary Expression. The significance of the literary expression of the Bible is learned from two sources: the context, the immediate word or thought in the text; the idea of the sacred language in which the original text of Scripture was written, and by a familiar acquaintance with the Scriptural way of speaking.

(a) Sacred Languages.—St. Augustine (De doctr.
EXEGESIS

EXEGESIS

Christ., II, xi; cf. xvi) warns us that "the knowledge of languages is the great remedy against unknown signs. Much of the Latin tongue need be known for a thorough knowledge of the Divine Scriptures, viz. the Hebrew and the Greek, so that recourse may be had to the older copies, if the infinite variety of the Latin translators occasions any doubt." Pope Leo XIII, in the Enzykheid "Providentialissimus Deus," agrees with the great African Doctor in urging the study of the sacred languages. It is most proper, he writes, "that professors of Sacred Scripture and theologians should master those tongues in which the Sacred Books were originally written; and it would be well that church students also should cultivate them, more especially those who aspire to academic degrees. And endeavours should be made to establish in all academic institutions—as has already been laudably done in many—chairs of the other ancient languages, especially the Semitic, and of other subjects connected therewith, for the benefit principally of those who are intended to profess sacred literature." Nor can it be urged that for the Catholic interpreter the Vulgate is the authentic text, which can be understood by any Latin scholar. The pontiff considers this exception in the following words: "It is not, therefore, that the writing of the Hebrew and Greek is substantially rendered by the Vulgate, nevertheless wherever there may be ambiguity or want of clearness, the 'examination of older tongues,' to quote St. Augustine, will be useful and advantageous." Recourse to the original text is considered the only scholarly approach to any great work of literature. A translation is never a perfect replica of the original work; no human translator can express the thoughts conveyed in another tongue, no translator is capable of seizing the exact shades of all the truths contained in any work, and in case of Biblical versions, we have often good reason for doubt as to the genuineness of their readings.

(b) Scriptural Language.—The Scriptural language presents several difficulties peculiar to itself. First, the Bible is not written originally in one or more languages, but in almost every book the style of a different writer. Secondly, the Bible was not written at a single period; the Old Testament covers the time between Moses and the last Old-Testament writer, i.e. more than one thousand years, so that many words must have changed their meaning during this interval. Thirdly, the Biblical Greek is written in the styles of authors with whom we are acquainted; up to about fifteen years ago, Biblical scholars used to speak about New-Testament Greek, they compiled New-Testament lexicons, and wrote New-Testament grammars. The discovery of the Egyptian papyri and other literary remains has broken down this wall of separation between the language of the New Testament and that of the time in which it was written; with regard to this point our present time may be considered as a period of transition, leading up to the composition of lexicons and grammars that will rightly express the relation of the Biblical Greek to the Greek employed in profane writings. Fourthly, the Bible deals with the greatest variety of topics, requiring a corresponding variety of vocabulary; moreover, its expressions are often figurative; some Heb. and Greek words are metaphorical, only possible by a change of meaning; it is, therefore, impossible to express the thoughts conveyed in the Bible text with the language of the ancient versions, a process calculated to remove some of the native ambiguities of the original text. A third help is found, according to the same great Doctor, in the diligent reading of the works of the Fathers, since many of them formed their style by a constant reading of Holy Scripture (loc. cit., II, xiii, xiv.). Nor must we omit to study the writings of Philo and Josephus, the later Jewish writers, and the historians of the history of their nation. They are helpful illustrations of the cultured language of the Apostolic time. The study of the etymology of the sacred languages is another means of becoming acquainted with the languages themselves. For a proper understanding of the etymology of Hebrew words, the knowledge of the cognate languages is useful. For instance, he who is in mind that many derivatives have a meaning quite different from the signification of their respective radicals, so that an argument based on etymology alone is open to suspicion.

(ii) Sense of the Literary Expression.—After the foregoing rules have aided the interpreter to know the various significations of the words of the sacred text, he must next endeavour to investigate in what precise sense the inspired writer employed his expressions. He will be assisted in this study by attending to the subject-matter of the book or chapter, to its occasion and purpose, to the grammatical and logical context, and to the parallel passages. Whatever meaning of the literary expressions is not in keeping with the subject-matter or the occasion and purpose, it will be ruled out. The occasion and purpose of a book or of a passage will often determine whether certain expressions must be taken in their proper or figurative sense, whether in a limited or an unlimited extent. Attention to this point will aid us in explaining aright such passages as John, vi, 33 sqq.; Matt., x, 5; Heb., i, 5, 7; etc. Thus we shall understand the first of these passages of the real flesh and blood of Christ, not of his same way. The context is the third aid in determining the precise sense in which each single word is used by the writer. We need not insist on the necessity of explaining an expression in accordance with its grammatical environment. The commentator must make sure of the grammatical connexion of an expression, so as not to do violence to the rules of inflection or of syntax. The so-called poetical parallelism may be considered as constituting part of grammar taken in a wider sense. But the logical context, too, requires attention; a commentator must not explain any expression in such a sense as to make the author contradict himself, being careful to assign to each word a meaning that will best agree with the thought of the sentence, of the chapter, and even of the book. Still, it must not be overlooked that the context is sometimes presented in a non-logical; in lyric poetry, in the words of the Prophets, or in animated dialogues, thoughts and sentiments are at times brought into juxtaposition, the logical connexion of which is not apparent. Finally, there is a so-called optical context which is found in the visions of the Prophets. The inspired seer may perceive grouped together in the same vision events which are widely separated in space and time. The so-called real or verbal parallelisms will aid the commentator in determining the precise sense in which the inspired writer employed his words. In case of verbal parallelism, or in the recurrence of the same literary expressions in different parts of the in-
spired books, it is better to explain the language of Paul by that of Paul, the expressions of John by those of John, than to explain Paul by Matthew, and John by Luke, or, again, it is more natural to explain an expression occurring in the Fourth Gospel by some other found in the same book than by a parallel passage taken from the Apocalypse. Finally, it should be kept in mind that parallelism of thought, or real parallelism, is a more reliable aid in finding the exact sense of a passage than a mere material recurrence of a sentiment.

(iii) Historical Setting.—The inspired writers connected with their words the ideas which they themselves possessed, and which they knew to be intelligible to their contemporaries. When they spoke of a house, they expressed a habitation to which their contemporaries were accustomed, not a contrivance in use among the barbarians. In order to arrive at the precise sense of a passage, we must therefore bear in mind its historical setting, we must consult the testimony of history. The true sense of the Bible cannot be found in an idea or a thought historically untrue. The commentator must therefore be well acquainted with sacred history and sacred archaeology, in order to know, to a certain extent at least, the various customs, laws, habits, national prejudices, etc., which entered into the inspired writings, and which the inspired writers proposed in their respective books. Otherwise it will be impossible for him to understand the allusions, the metaphors, the language, and the style of the sacred writers. What has been said about the historico-grammatical interpretation of Scripture is synthesized, as it were, in the Ecclesiastical already quoted: "The more our adversaries pretend to the contrary, so much the more soberly, and without any tediousness should we adhere to the received and approved canons of interpretation. Hence, while weighing the meanings of words, the connexion of ideas, the parallelism of passages, and the like, we should by all means make use of such illustrations as can be drawn from a proper eulogy of an external sort."

(2) Catholic Interpretation.—Since the Church is the official custodian and interpreter of the Bible, her teaching concerning the Sacred Scriptures and their genuine sense must be the supreme guide of the commentator. The inferences which flow from this principle are partly negative, partly positive.

(i) Negative Directions.—The following directions are called negative not because they do not imply a positive teaching, but because they contain directions or prohibitions, which are deduced by the commentator only from positive results, but because they appear to emphasize at first sight the avoidance of certain methods of proceeding which would be legitimate in the exegesis of profane books. They are based on what the Church teaches concerning the sacred character of the Bible.

(2) Avoid Irreverence.—Since the Bible is God's own book, its study must be begun and prosecuted with a spirit of reverence and prayer. The Fathers insist on this need in many passages. St. Athanasius calls the Scriptures the fountain that quenches our thirst for justice and supplies us with the doctrine of piety (Ep. fest. xxxix); St. Augustine (C. Faust., XIII, xviii) wishes them to be read for a memorial of our faith, for the consolation of our soul, and for an exhortation to charity; Origen (Ep. ad Gregor. Neocas., c.iii) considers pious prayer as the most essential means for the understanding of the Divine Scriptures; he wishes to see humility joined with prayer; St. Jerome (In Mich., 1, x) agrees with St. Augustine (De doctr. chr., III, xxxvii) in regarding prayer as the principal and most necessary aid for the understanding of the Scriptures. We must add the words of other patristic writers, if the alleged references were not clear and explicit enough to remove all doubt on the subject.

(b) No Error in Scripture.—Since God is the principal Author of Sacred Scripture, it can contain no error, no self-contradiction, nothing contrary to scien-

tific or historical truth. The Ecclesiastical "Providen-
tissimus Deus" is most explicit in its statement of this prerogative: "In the Bible, while God himself receives as sacred and canonical, and it coexists wholly and entirely, with all their parts, at the dicta-
tion of the Holy Ghost; and so far is it from being possible that any error can coexist with inspiration, that inspiration not only is essentially incompatible with error, but excludes and rejects it as absolutely and necessarily, as it is impossible that God Himself, who superintends with, can err through it."

The Fathers agree with this teaching almost unani-
mously; we may refer the reader to St. Jerome (In Nah., i, iv), St. Irenæus (C. haer., II, xxviii), Clement of Alexandria (Strom., VII, xvi), St. Augustine ("C. Faust.", II, i; cf. "In Ps. cxviii", serm. xxxi, 5; "Ad Hier.", ep. lxxii, 2, 22; "Ad Oros. c. Prisc.", xi), St. Gregory the Great (Pref. in Job, p. 2).

The great African Doctor suggests a simple and radical remedy against apparent errors in the Bible: "Either my code is wrong, or the translator has blundered, or I do not understand."

But inerrancy is not the prerogative of everything that happens to be found in the Bible; it is restricted to what the inspired writers state as their own, unless, as I have quoted, others quote it. The inspired writers, it is also admitted, have not been infallible; the words of an Apostle, e. g., or of a Divinely authorized speaker, whether angel or man (cf. Luke, i, 42, 67; ii, 25; II Mach., vii, 21), or again words regarded as having Divine authority either by Scripture (cf. I Cor., iii, 19; Gal., iv, 30) or by the Church (e. g., the Magnificat). Biblical words that do not fall under this category, however, the weight of which must be studied from other sources. Here is the place to take notice of a decision issued by the Biblical Commission, 13 Feb., 1905, according to which certain Scriptural statements may be treated as quotations, though they appear on the surface to be the utterances of the inspired writer. But this can be done only when there is an evident and independent proof that the inspired writer really quotes the words of another without intending to make them his own. Recent writers call such passages "tacit" or "implicit" citations.

The inerrancy of Scripture does not allow us to admit contradictions in its statements. This is under-
stood of the genuine or primitive text of the Bible. Owing to textual corruptions, we must be prepared to find in the text passages or statements that may appear contradictory; in weightier matters such discrepancies have been avoided even in our present text. Discrepancies which may appear to obtain in matters of faith or morals should put the commentator on his guard that the same Biblical expressions are not everywhere taken in the same sense, that various passages may differ from each other and the complete statement of a doctrine differs from its incomplete expression, as a clear presentation differs from its obscure delineation. Thus "works" has one meaning in James, ii, 24, an-
other in Rom., iii, 28; "brothers" denotes one kind of relationship in Matt., xi, 16, quite a different kind in most other passages; John, xiv, 28, and x, 30, Acts, viii, 12, and Matt., xxviii, 19, are respectively opposed to each other and the complete statements of two obscure one, as an explicit one to a mere implication. In apparent Biblical discrepancies found in historical passages, the commentator must distinguish between statements made by the inspired writer and those merely quoted by him (cf. I Kings, xxxi, 9, and II Kings, i, 6 sqq.), between a double account of the same fact and the narrative of two similar events, which begins with different starting-points, finally between a compendious and a de-
tailed report of an event. Lastly, apparent discrepan-
cies which occur in prophetic passages necessitate an investigation, whether the respective texts emanate from the Prophets as Prophets (cf. II Kings, vii, 3—17),
whether they refer to the same or to similar subjects (the destruction of Jerusalem, e.g., and the end of the world), whether they consider their subject from the same point of view (e.g. the suffering and the glorious Messias), whether they use proper or figurative language. Thus the Prophet Nathan in his private capacity encourages David to build the Temple (II Kings, vii, 3), but as Prophet he foretells that Solomon will build the house of God (Ib., 18).

He can write according to any contraposition, or to any contradiction between the Bible and the certain tenets of science. It cannot be supposed that the inspired writers should agree with all the various hypotheses which scientists assume to-day and reject to-morrow; but the commentator will be required to harmonize the teaching of the Bible with the scientific results which have been proved or are certain. This rule is clearly laid down by the Encyclical in the words of St. Augustine: "Whatever they can really demonstrate to be true of physical nature, we must show to be capable of reconciliation with our Scriptures, and whatever they assert in their treatises which is contrary to these Scriptures of ours, that is to Catholic faith, we must either prove as well as we can to be entirely false, or at all events we must show that it is not contained therein, however it be so" (De Gen. ad litt., I, xxi, xlii). But the commentator must also be careful "not to make rash assertions, or to assert what is not known as known" (St. Aug., in Gen. op. imperf., ix, 30). The Encyclical appeals here again to the words of the great African Doctor (St. Aug., De Gen. ad litt., II, ix, xx): [The Holy Ghost] who spoke by them [the inspired writers], did not speak in his own person, and as such; he repeats, [i.e., the essential nature of the things of the visible universe], things in no way profitable unto salvation."

The pontiff continues: "Hence they . . . described and dealt with things in more or less figurative language, or in terms which were commonly used at the time, and which in many instances are in daily use at this day, even by the most eminent men of science. Ordinary speech primarily and properly describes what comes under the senses; and somewhat in the same way, the sacred writers—as the Angelic Doctor reminds us (Summa, I, Q. lxv, a. 1, ad 3am)—"went by what visibly appeared," or put down what God, speaking to men, signified in a way men could understand and were accustomed to."

In Gen., i, 16, e.g., the sun is commanded to stand still; in Ex., x, 12, the sun is commanded to stand still; in Eccl., i, 5, the sun returns to its place; in Job, xxxvi, 11, the heavens are upheld by columns; in other passages the firmament appears solid and brazen, and God rides on the clouds of heaven.

Finally, the commentator must be prepared to deal with the seeming discrepancies between Biblical and profane history. The considerations to be kept in mind here are similar to those laid down in the preceding paragraph. First, not all statements found in profane sources can be regarded as a priori as Gospel truth; some of them refer to subjects with which the writers were imperfectly acquainted, others proceed from party-feeling and national vanity, others again are based on imperfectly or only partially translated ancient documents. Secondly, the Bible does not ex professo teach profane history or chronology. These topics are treated only incidentally, in as far as they are connected with sacred subjects. Hence it would be wrong to regard Scripture as containing a complete course of history and chronology, or to consider the text of historical portions above suspicion of corruption. Thirdly, we must keep in mind the words of St. Jerome (in Jer., xxviii, 10): "Many things in Sacred Scripture are related according to the opinion of the time in which they are said to have happened, and not according to objective truth"; and again (in Matt., xiv, 8): [According to the custom of Scripture, the historian relates the opinion concerning many things in accordance with the general belief at that time.] Father Delatte maintains (Le Criterium à l'usage de la Nouvelle Exégèse Biblique, Liége, 1907) that according to St. Jerome the inspired writers report the public opinion prevalent at the time of the events related, not the public opinion prevalent when the narrative was written. This distinction is of greater practical importance than it, at first, seems to be. For Father Delatte only grants that the inspired historian may write according to "sensible appearances" while his opponents contend that he may follow also the so-called historic appearances. Finally, the first two decisions of the Biblical Commission must be mentioned in this connexion. Some Catholic writers had attempted to remove certain historical difficulties from the sacred text either by considering the respective passages as to-the-day or only as analogies, or as apodictic, for the writers of the Bible, for the which the inspired writers did not in any way vouch; or by denying that the sacred writers vouch, in any way, for the historical accuracy of the facts they narrate, since they use these apparent facts merely as pegs on which to hang some moral teaching. The Biblical Commission rejected these two methods by decrees issued respectively 13 Feb. and 29 June, 1905, respectively according to sensible appearances, the case in which, due regard being paid to the sense and judgment of the Church, it can be proved by solid argument that the sacred writer either truly quoted the sayings or documents of another without speaking in his own name, or did not really intend to write history, but only to propose a parable, an allegory, or another non-historical literary concept.

(a) Defined Texts. — The Catholic commentator is bound to adhere to the interpretation of texts which the Church has defined either expressly or implicitly. The number of these texts is small, so that the commentator can easily avoid any transgression of this principle. The Council of Trent teaches that Rom., v, 12, refers to original sin (Sess. V, cc. ii, iv), that John, iii, 5, teaches the absolute necessity of the title of water (Sess. V, c. iv; Sess. VII, De bapt., c. ii), that Matt., xxvi, 26 sq. is to be understood in the proper sense (Sess. XIII, cap. i); the Vatican Council gives a direct definition of the texts, Matt., xvi, 16 sqq. and John, xxi, 15 sqq. Many more Scripture texts are indirectly defined by the definition of certain doctrines and the condemnation of certain errors. The Council of Nicaea, e.g., showed how those passages ought to be interpreted on which the Arians relied in their contention that the Word was a creature; the Fifth Ecumenical Council (II Constantinople) teaches the right meaning of many prophecies by condemning the interpretation of Theodore of Mopsuestia.

(b) Patristic Interpretation. — Pope Leo XIII, in his
Encyclical "Providentissimus Deus", repeats the principles concerning the authority of the Fathers laid down by the Vatican and Tridentine Councils. The Holy Fathers, to whom, after the Apostles, the Church owes its growth—who have planted, watered, built, governed, and cherished it—(Aug., C. Julian., II, x, 37)—the Holy Fathers, we say, are of supreme authority whenever they all interpret in one and the same manner any text of the Bible, as pertaining to the doctrine of faith or morals; for their unanimity clearly evinces the correctness of the interpretation, and whatever they declare concerning the Apostles as a matter of Catholic faith. Three conditions are, therefore, required in order that the patristic authority may be absolutely decisive; first, they must interpret texts referring to matters of faith or morals; secondly, they must speak as witnesses of Catholic tradition, not merely as private theologians; thirdly, there must be a moral unanimity in their interpretation. This unanimity is not destroyed by the silence of some of the foremost Fathers, and is sufficiently guaranteed by the consentient voice of the principal patristic writers living at any critical period, or by the agreement of commentators living at various times; but the unanimity is destroyed if some of the Fathers openly deny the correctness of the interpretations to which they assent, or if they represent the same passage in such a way as to render impossible the explanation given by others. But the Encyclical warns us to treat the opinion of the Fathers with reverence, even if there is no unanimity: "The opinion of the Fathers", says the holy pontiff, "is also of very great weight when they treat of these matters in their capacity of doctors, unofficially, not only by reason of the degree of revealed doctrine and in the full acquittance with many things which are useful in understanding the Apostolic books, but because they are men of eminent sanctity and of ardent zeal for the truth, on whom God has bestowed a more ample measure of his light."

(c) The Analogy of Faith.—Here again the Encyclical "Providentissimus Deus" is our guide: "In the other passages", it reads, "the analogy of faith should be followed, and Catholic doctrine, as authoritatively proposed by the Church, should be held as the supreme law; for, seeing that the same God is the author both of the Sacred Books and of the doctrine committed to the Church, it is clearly impossible that any teaching can by legitimate reason be extracted from the former, which directly resists a revealed law of the latter." This principle has a double influence on the interpretation of Scripture, a negative and a positive influence. First, the commentator cannot admit in Scripture a statement contrary to the teaching of the Church; on the other hand, the agreement of an explanation with the doctrine of the Church does not prove its correctness, since more than one explanation may agree with the ecclesiastical teaching. Secondly, the Catholic interpreter must explain the obscure and partial teaching of the Scriptures by the clear and complete teaching of the Church; the passages, e. g., which refer to the Divine and human nature of Christ, and to the power of binding and loosing, find their explanation and their complement in Catholic tradition and the Church; this supplies us with many ways for the refutation of assailants and the explanation of difficulties.

III. SACRED RHETORIC.—The genuine teaching of Sacred Scripture is useful to all, but few have the time necessary to investigate it. It is for this reason that Scripture students express their results in writing so as to share their light with as many as possible. Sixtus Senensis [Bibliotheca saneta (Venice, 1575), I, pp. 275 sqq.] enumerates twenty-four various forms in which such Scriptural explanations may be expressed. But some of these methods are no longer in use; others may be reduced to fewer and more general heads. According to the end which the writer has in view, they may be divided into theoretical and practical or historico-dogmatic and moral treatises; considering the persons for whom they were written, they are either popular or learned expositions; but if their literary form be considered, they may be divided into the common and more rational principle of division, there are five kinds of Biblical exegesis: the version, the paraphrase, the gloss and scholion, the dissertation, and the commentary.

(1) The Version.—The version is the translation of the Bible from one language into another, especially from its original into the vernacular language. A version made directly from the original text is called immediate, while it is mediate if it be based directly on another version. It is verbal if it renders the very words; in case it renders the meaning rather than the words, it is a free version. A good version must be faithful and clear, i.e., it must express the thought without any alteration; it must reproduce the literary form, whether it be the original or the copy, as nearly as possible; and it must be easily intelligible, as far as the character of the two languages in question permits this. This shows the difficulty of making a good translation; for it implies not merely a thorough knowledge of the two languages, but also an accurate insight into the genuine meaning of Sacred Scripture.

(2) The Paraphrase.—The paraphrase expresses the genuine sense of Scripture by an interpretative and expansive form. The version removes the difficulties which arise from the fact that the Bible is written in a foreign language; the paraphrase elucidates also the difficulties of thought. For it supplies the transitions and middle terms omitted by the author; it changes the foreign and involved phraseology of the original into idioms generally intelligible; it explains all the elements of the original by adding definitions, indicating causes and reasons, and illustrating the text by reference to parallel passages. A good paraphrase must render the thought of the original most accurately, and must at the same time be brief and clear; there is danger, in this form of exposition, of rendering obscure what has been clearly said in the original text.

(3) The Commentary.—The commentator explains the Scripture text the difficulties connected with the foreign language, the paraphrase elucidates the difficulties of thought; but there are still other difficulties connected with the Bible, which must be removed by means of notes. One kind of brief notes, called glosses, explains the difficulties connected with the words; another kind, called scholia, deals with variant readings, verbal difficulties, unknown persons, countries, and things, and with the connexion of thought. Two celebrated series of glosses deserve special mention: the glossa ordinaria by Walafrid Strabo, and the glossa interlinearis by Anselm of Laon.

(4) The Dissertation.—Origens, Eusebius, and St. Jerome were asked by their contemporaries concerning certain difficulties that had arisen; at this time, the science of special elucidations of particular passages has been felt by the faithful of all ages. The answers to such questions we may call dissertations or treatises. It is understood that only really important texts ought to be made the subject of such scholarly explanations. In order to satisfy the inquisitive reader, the essayist should examine the text critically; he should state its various explanations given by other writers and weigh them in the light of the principles of hermeneutics; finally, he should give the true solution of the difficulty, prove it by solid arguments, and defend it against the principal exceptions.

(5) The Commentary.—The commentary is a continu-
uous, full, learned, well-reasoned, and complete explanation, touching upon not merely the more difficult passages, but everything that stands in need of elucidation. Hence the commentator must discuss all the variants, state and prove the genuine sense of the book he explains, add all the necessary personal, geographical, historical, ethical information, and indicate the sources whence it is drawn, harmonize the single parts of the subject, and finally throw the entire book, consider its apparent contradictions, and explain the sense in which its quotations from the Old Testament must be understood. With a view of securing an orderly exposition, the author should premise the various historically-studies belonging to the whole book; he should divide and subdivide the book into its principal and subordinate parts, clearly stating the original subject of each, and finally arrange the various opinions concerning disputed questions in a neatly distributed list, so as to lighten the work of the reader. What has been said sufficiently shows the quality which a well-written commentary ought to possess; it must be faithful in presenting the genuine sense of Scripture; it must be clear, complete, and brief; and it ought to throw the principal work of the commentator by the light it throws on the more complicated questions. The commentaries which consist of mere lists of the patristic views on the successive texts of Scripture are called catenae (q. v.).

Perhaps the homily may be added to the foregoing methods of Biblical exposition. It is written in a popular style and with a practical tendency. It is not concerned with the subtle and more difficult questions of Scripture, but explains the words of a Biblical section in the order in which they occur. A more elevated kind of homily seizes the fundamental idea of a Scriptural section, and considers the rest in relation to it. The Church has always encouraged such homiletic discourses, and the Fathers have left a great number of them. IV. HISTORY OF EXEGESIS.—The history of exegesis shows its first beginnings, its growth, its decay, and its restoration. It points out the methods which may be safely recommended, and warns against those which rather corrupt than explain the Sacred Scriptures. In general, we may distinguish between Jewish and Christian exegesis.

(1) Jewish Exegesis.—The Jewish interpretation of the Scriptures began almost at the time of Moses, as may be inferred from traces found both in the more recent canonical and the apocryphal books. But in their method of interpretation the Palestinian Jews differed from the Hellenistic.

(2) Palestinian Exegesis. All Jewish interpreters agree in admitting a double sense of Scripture, a literal and a mystical, though we must not understand these terms in their strictly technical sense.

(a) The literal exposition is mainly represented by the so-called Chaldee paraphrases or Targumim, which came into use after the Captivity, because few of the returning exiles understood the reading of the Sacred Text. The original of the Targum Onkelos, which appears to have been in use as early as the first century after Christ, though it attained its present form only about A. d. 300–100. It explains the Pentateuch, adhering in its historical and legal parts to a Hebrew text which is, at times, nearer to the original of the Septuagint than the Masoretic, but straying in the prophetic and poetical portions so far from the original as to leave it hardly recognizable.

Another paraphrase of the Pentateuch is the Targum Pseudo-Jonathan, or the Jerusalem Targum. Written after the seventh century of our era, it is valueless both from a critical and an exegetical point of view, since its explanations are wholly arbitrary. —The Targum Jonathan, or the paraphrase of the Prophets, began to be written in the first century, at Jerusalem; but it owes its present form to the Jerusalem rabbis of the fourth century. The historical books are a fairly faithful translation from the original text; in the poetical portions and the later Prophets, the paraphrase often presents fiction rather than truth. —The paraphrase of the Hagiographa deals with the Book of Job, the Psalms, the Canticle of Canticles, Proverbs, Ruth, the Lamentations, Ecclesiastes, Esther, and Paralipomenon. It was not written before the second century, and is so replete with rabbinic fiction that it hardly deserves the notice of the serious interpreter. The notes on Cant., Ruth, Lam., Eccles., and Esth. rest on public tradition; those on the other Hagiographa express the opinions of one or more private teachers; the paraphrase of Par. is the most recent and the least valuable of all.

(b) The method of arguing employed in the First Gospel and the Epistle to the Hebrews shows that the Jews before the coming of Christ admitted a mystical sense of Scripture; the same may be inferred from the letter of Pseudo-Aristeas and the fragment of Aristo- bulus. The Gospel narrative, e. g., Matt., xxiii, 16 sqq., testifies that the Pharisees endeavoured to derive the arbitrary traditions from the Law by way of the most extraordinary contortions of its real meaning. The mystical interpretation of Scripture practised by the Jewish scholars who lived after the time of Christ, may be reduced to the following systems.

(a) The Talmudists ascribed to every text several thousand legitimate meanings belonging either to the historical or the ethical and religious, and the rational and the mystical. Thus they maintained the legal inferences derived from the Mosaic Law, all of which the Talmudists referred back to Moses himself; the Haggadah was the collection of all the material gathered by the Talmudists from history, archeology, geography, grammar, and other extra-Scriptural sources, not excluding the most fictitious ones. In their commentary these were divided into three words, the literal, the homiletic, and the derivative. The former was subdivided into the plain and the recondite sense; the latter, into logical deductions, and inferences based on the way in which the Hebrew words were written or on association of ideas. As to the hermeneutical rules followed by the Talmudists, they were reduced to seven by Hillel, to eleven by B. H. and to a smaller number by Galilee. In substance, many of these principles do not differ from those prevalent in our day. The interpreter is to be guided by the relation of the genus to the species, of what is clear to what is obscure, of verbal and real parallelisms to their respective counterparts, of the example to the exemplified, of what is logically coherent to what appears to be contradictory, of the scope of the writer to his literary production. The commentaries written according to these principles are called Midrashim (plural of Midrash); the following must be mentioned: Mekhila (measure, rule, law) explains Ex., xii, 1–23, 30; xxi, 12–17; xxxiv, 1–4, and is variously assigned to the second or third century, even to more recent times; it gives the Halakhia (original text), the halakhic and the aggadic, and has for its purpose to contain also material belonging to the Haggadah. Sefer ha-Sifra explains the Book of Leviticus; Siphri, the Books of Numbers and Deuteronomy; Pesiqta, the Sabbathical sections. —Rabboth (plural of Rabbi) is a series of Midrashim explaining the single books of the Pentateuch and the five Megilloth or the five Hagiographa which yield read in the synagogues. —With a philosophic, any pathic, and moral sense is preferred to the literal, and the fables and sayings of the rabbis are highly valued. —Tanachuma is the first continuous commentary on the Pentateuch; it contains some valuable traditions, especially of Palestinian origin. —Yalkut Simoni contains annotations on all the books of the Old Testament.

(b) The Caraites are related to the Talmud-
ists, as the Sadducees were related to the Pharisees. They rejected the Talmudic traditions, just as the Sadducees refused to acknowledge the authority of the Pharisaic teaching (cf. Joseph., Ant., XVIII, x, 6). The Caraites derive their origin from Aman, born about A. D. 700, who founded this sect out of spite, because he had not obtained the headship of the Jews outside Palestine. From Bagdad, the place of its birth, the sect soon spread into Palestine and especially into the Crimea, so that about A. D. 750 it occasioned what is practically a schism among the Jews. The Caraites reject all tradition, and maintain only the Mosaic Law. By means of about thirteen hermeneutical rules, they establish the literal sense of Scripture, and this they supplement by means of the synagogy and the consensus of the Synagogue. Owing to their rejection of authentic interpretation and their claim of private judgment, they have been called by some writers "Jewish Protestants".

(3) Hellenistic Exegesis.—Generally speaking, the Alexandrian Jews were favourable to the allegorical explanation of Scripture, thus endeavouring to harmonize the inspired records with the principles of Greek philosophy. Eusebius has preserved specimens of this Hellenistic exegesis in the fragments of Aristo- tolus (Hist. Eccles., VII, xxxii; Prepar. evang., VIII, x, 27; Testament of Solomon, Papias, IV, evang., VIII, ix), both of whom wrote in the second century B. C. Philo attests that the Essenes adhered to the same exegetical principles (De vit. contempl., x); but Philo (died A. D. 39) himself is the principal representative of this manner of interpretation. According to Philo, Abraham symbolizes virtue acquired by doctrine; Isaac, inborn virtue; Jacob, virtue acquired by practice and meditation; Egypt, this world; Joseph, the body; Chanaan, piety; the dove, Divine wisdom, etc. (De Abraham, ii).

The Cabbalists exceeded the preceding interpreters in their allegorical explanation of Scripture. Traces of their system are found in the last pre-Christian centuries, but its full development did not take place till the end of the first millennium of the Christian Era. In accordance with their name, from a word meaning "to receive", the Cabbalists claimed to possess a secret doctrine received by way of tradition from Moses, to whom it had been revealed on Mount Sinai. They maintained that all earthly things had their heavenly prototypes or ideals; they believed that the literal sense of Scripture included the allegorical sense, as the box contains the figures. As the literal sense dealt only with letter and number, the Cabbalists endeavored to reach this veiled meaning. Three methods helped to attain it: Gematia takes the numerical value of all the letters which make up a word or an expression and derives the hidden meaning from the resultant number; Notaricon forms new entire words out of the single letters of a word, or it forms a word out of the initial letters of the several words of a phrase; Temura consists in the transposition of the letters which make up a word, or in the systematic substitution of other letters. Thus they transpose the consonants of mol'akhhi (my angel; Ex., xxiii, 23) into Mikha'el (Michael). There is a twofold system of substitution: the first, Atbash, substitutes the last letter of the alphabet for the first, the second last for the second, etc. until the last letter is substituted for the second half of the alphabet for the corresponding letters of the first half. The Cabbalistic doctrine has been gathered in two principal books, one of which is called "Yegirah", the other "Zohar".

We may add the names of the more prominent Jewish commentators: Sandya Gaon (b. 892; d. 942), in the Fayyum, Egypt, translated the whole of the Old Testament and wrote commentaries with the same Moses ben Samuel ibn Chiqlitila, of Cordova, explained the whole of the Old Testament in Arabic, between A. D. 1050 and 1080; only fragments of his work remain.—Rabbi Solomon ben Isaac, known also under the names Rashi and Yarchi (b. about 1040, at Troyes; d. 1105), explained the whole of the Old Testament, except Par. and Esth., according to its literal sense, though he did not neglect the allegorical; he shows an anti-Christian tendency.—Rabbi Abraham ben Ezra, often called Aben Ezra (b. about 1093 at Toledo, Spain; d. 1167 on the Island of Rhodes). Among his many other works he left an incomplete commentary on the Pentateuch and other parts of the Old Testament; he renders the literal sense faithfully without excluding the allegorical, e. g. in Cant. (which he called Haggaz).—Rabbi Moses ben Nachman, of Carcassonne (d. 1210), has made a complete explanation of the Old Testament in the literal sense, without excluding the spiritual; his anti-Christian feelings show itself in his treatment of the Messianic prophecies.—Rabbi Moses ben Maimon, commonly called Maimonides or Rambam (b. 1135 at Cordova, Spain; d. 1204 in Egypt), became a convert to Mohammedanism in order to escape persecution, then fled to Egypt, where he lived as a Jew, and where, for the guidance of those who could not harmonize their philosophical principles with the teaching of Sacred Scripture, he wrote his celebrated "Guide of the Perplexed", a work in which he presents some of the Biblical stories as mere literary expressions of certain ideas.—Rabbi Isaac Abrabanel (d. 1508), a Haggadist, has written commentaries on books, and Daniel, adding often irrelevant matter and arguments against Christian revelation.—Rabbi Elias Levita (d. after 1542), is known as one of the best Jewish grammarians, and as the author of the work "Tradition of Tradition", in which he gives the history of Massoretic criticism.—Among the Caraites we must mention: Rabbi Jacob, the last of the line of Rabbis; or Rabbi Abba, a Jewish Talmudic authority, scholars, or the following: the author of the Talmud of Constantinople, the Talmud of North Africa, the Talmud of Cairo, and the Talmud of Babylonia, which is called the "Great Babylonian Talmud".

(2) Christian Exegesis.—For the sake of clearness we may distinguish three great periods in Christian exegesis: the first ends about A. D. 604; the second brings us up to the Council of Trent; the third embraces the time after the Council of Trent.

(i) The Patristic Period.—The patristic period embraces three distinct classes of exegetes, the Apostolic and apologetical writers, the Greek Fathers, the Latin Fathers. The amount of exegetical literature produced by these three classes varies greatly; but its character is so distinctively proper to each of the three classes that we can hardly consider them under the same heading. (a) The Apostolic Fathers and Apologists.—The early Christians made use of the Scriptures in their religious meetings as the Jews employed them in the synagogues, adding homilies to the writings of the New Testament more or less completely to those of the Old. The Apostolic Fathers did not write any professional commentaries; their use of Scripture was incidental and casual rather than technical; but their citations and allusions show unmistakably their acceptance of some of the New Testament writings. Whether or not the apostolic writings of the second century are to be considered as canonical is a matter of controversy among modern critics. St. Justin and St. Irenæus are noted for their able defence of Christianity, and their arguments are often based on texts of Scripture. St. Hippolytus appears to have been the first Christian theologian who at-
tempted an explanation of the whole of Scripture; his
method we learn from the remaining fragments of his
writings, especially of his commentary on Daniel. It
may be said in general that these earliest Christian
writers admitted both the literal and the allegorical
sense of Scripture. The latter sense appears to have
been favoured by St. Clement of Rome, Barnabas,
St. Justin, St. Irenaeus, while the literal seems to pre-
clain in the writings of St. Hippolytus, Tertullian,
the Clementine Recognitions, and among the Gnostics.

(b) The Greek Fathers.—The Encyclopaedia "Provi-
dentissimus Deus" refers mainly to the Greek Fathers
when it says: "When there arose, in various sees,
catechetical and theological schools, of which the most
central was undoubtedly that of Alexandria; St. John
Chrysostom in the East, there was little taught in those schools but what
was contained in the reading, the interpretation, and
the defence of the Divine written word. From them
came forth numbers of Fathers and writers whose
labourious studies and admirable writings have justly
merited for the three following centuries the appella-
tion of the golden age of Biblical exegesis,"

(a) The School of Alexandria.—Tradition loves to
trace the origin of the Alexandrian School back to the
Evangelist St. Mark. Be that as it may, towards the
end of the second century we find St. Pantaenus presi-
dent of the school; none of his writings are extant, but
Eusebius (Hist. Eccl., V, x) and St. Jerome (De vir.
ill., c. xxvii) testify that he explained Sacred Scrip-
ture. It is likely that two of his pupils, who did not write any book (Strom., I, i); he died before 200. His successor was Clement of Alexandria, who
had first been his disciple, and after 190 his col-
deague. Of his writings are extant "Cohortatio ad
Gentiles", "Pseudagoge", and "Stromata"; also the
Latin translation of part of his eight exegetical books (Migne, Patr. Gr., c. 410). This was followed by Origen (b. 152; d. 254), the principal glory of
the whole school. Among his works, the greater part
of which is lost, his "Hexapla" and his threefold ex-
planation of Scripture, by way of scholia, homilies, and
commentaries, deserve special notice. It was Origen,
too, who fully developed the hermeneutical principles
which distinguish the Alexandrian School, though they
are not applied in their entirety by any other Father.
He applied Plato's distinction of body, soul, and spirit
to the Scriptures, admitting in them a literal, a moral,
and a mystical or spiritual sense. Not that the whole
of Scripture has this triple sense. In some parts the
literal sense may be neglected, in others the allegorical
may be lacking, while in others again the three senses
may be found. He believed and apprehended, that the
explanations of the Evangelists can be explained only
by means of the spiritual sense, that the whole ceremonial
and ritual law must be explained mystically, and that
all the prophetic utterances about Judea, Jerusalem,
Israel, etc., are to be referred to the Kingdom of
Heaven and its citizens, to the good and bad angels,
etc. Among the eminent writers of the Alexandrian
School, and early in the fourth century, we may
mention Dionysius the Great (d. 265), St. Gregory Thaumatur-
gus (d. 270), Eusebius of Caesarea (d. 310), St. Athanas,
us (d. 373), Didymus of Alexandria (d. 397), St.
Epiphanius (d. 403), St. Cyril of Alexandria (d. 444),
and finally also the celebrated Cappadocian Fathers,
St. Basil the Great (d. 379), St. Gregory Nazianzen
(d. 399), and St. Gregory of Nyssa (d. 394). The last
three of these have given many points in common with
the School of Antioch.

(b) The School of Antioch.—The Fathers of Antioch
adhered to hermeneutical principles which insist more
on the so-called grammatico-historical sense of the
Sacred Books than on their moral and allegorical
meaning. It is true that Theodore of Mopsuestia
urged the literal sense to the detriment of the typical
believing that the New Testament applies some of the
prophecies to the Messias only by way of accommoda-
tion, and that on account of their allegories the Canti-
tle of Canticles, together with a few other books, should
not be admitted into the Canon. But generally speak-
ing, the Fathers of Antioch and Eastern Syria, the
latter of whom formed the School of Nisibis or Edessa,
steered a course midway between Origen and Theo-
doret, avoiding the excesses of both, and thus laying
the foundation of the hermeneutical principles which
the Catholic exegete ought to follow. The principal
representatives of the School of Antioch are St. John
Chrysostom (d. 407); Theodore of Mopsuestia (d. 429),
condemned by the Fifth Ecumenical Synod on ac-
count of his explanation of Job and the Canticle of
Canticles, and in certain respects the forerunner of
Hippolytus; St. Cyril of Alexandria, both numbered
among the Antiochene commentators on account of his Biblical explanations inserted in about
two thousand of his letters; Theodoret, Bishop of
Cyrrus in Syria (d. 458), known for his Questions on the
Octateuch, the Books of Kings and Par., and for his
Commentaries on the Psalms, the Cant., the Prophets,
and the Epistles of St. Paul. The School of Edessa
especially in the names of Aphraates who flourished in
the first half of the fourth century, St. Ephraem (d. 373),
Cyrillonas, Balaeus, Rabulas, Isaac the Great, etc.

(c) The Latin Fathers.—The Latin Fathers, too,
admitted a twofold sense of Scripture, insisting vari-
ously now on the one, now on the other. We can
only enumerate their names: Tertullian (b. 160), St.
Clement of Alexandria (d. 215), St. Irenaeus (d. 202), St.
Hilary, Marius Victorinus, and St. Ambrose depend.

(ii) Second Period of Exegesis, A. D. 604-1546.—We
consider the following nine centuries as one period of
exegesis, not on account of their uniform productive-
ness or barrenness in the field of Biblical study, nor on
account of their uniform tendency of developing any
particular branch of exegesis, but rather on account of
their characteristic dependence on the work of the
Fathers. Whether they synthesized or amplified,
whether they analyzed or derived new conclusions
from old premises, they always started from the general
trend displayed during this period the labours of the Greek writers can in no
way compare with those of the Latin, still it will be
found convenient to consider them apart.

(a) The Greek Writers.—The Greek writers who
lived between the sixth and the thirteenth centuries
composed partly commentaries, partly compilations.
It is not possible to give a complete list of those who
are variously assigned to the fifth and sixth, or to the
eight and ninth centuries, explained the Apocalypse;
Porphyrius of Gaza (524) wrote on the Octateuch, Is.,
and Prov.; Hesychius of Jerusalem wrote probably
about the end of the sixth century on Lev., Pss., Is.,
The Minor Prophets, and the concordance of the
Gospels; Anastasius Sinaita (d. 590) left twelve books
of allegorical exegesis; the last century, St. Chrysom-
dorus (d. 620) and St. Maximus (d. 662) left more
sober explanations than Anastasius, though they are
not free from allegorism; St. John Damascene (d. 760)
has many Scriptural explanations in his dogmatic and
polenical works, besides writing a commentary on the
Pauline Epistles, in which he follows Theodoret
and St. Cyril of Alexandria, both especially St. Chrysom-
dorus (d. 591), Eumenius (tenth century), Theo-
phylactus (d. 1107), and Euthymius (d. 1118) were
adherents of the Greek Schism, but their exegetical works deserve attention.—The above-named compilations are technically called catenae. They furnish continuous explanations of various books of Scripture in such a way that they give after each text the various patristic explanations either in full or by way of a synopsis, usually adding the name of the particular Father whose opinion they transcribed. Several of these catenae have been printed, such as Nicephorus, on the Oecateuch (Leipzig, 1772); B. Corderius, on the Actus Apostolorum (1645-1646); A. Scholarius, on the Histories of the Greeks, and the Lyra (1337); A. Estius, on the Maccabees (Rome, 1631); Cranmer, on the New Testament (Oxford, 1638-1640).

(b) The Latin Writers.—The Latin writers of this epoch may be divided into two classes: the pre-Scholastic and the Scholastic. The two are of equal importance, but they are too different to be treated under the same heading.

(a) The Pre-Scholastic Period.—Among the many writers of this age who were instrumental in spreading the Biblical expositions of the Fathers, the following are deserving of notice: St. Isidore of Seville (d. 636), the Venerable Bede (d. 735), Alcuin (d. 804), Haymo of Halberstadt (d. 855), Rabanus Maurus (d. 856), Walfrid Strabo (d. 849), who compiled the Glossa ordinaria, Anselm of Laon (d. 1117), Kuno von der Berge, Robert of Denzig (d. 1155), Hugh of St. Victor (d. 1141), Peter Abelard (d. 1142), and St. Bernard (d. 1153). The particular writings of each of these great men will be found under their respective names.

(b) The Scholastics.—Without drawing a mathematical line of distinction between the writers of this period, we may say that the writers who were instrumental in spreading the Biblical expositions of the Fathers were divided into two classes: the pre-Scholastic and the Scholastic. The two are not of equal importance, but they are too different to be treated under the same heading.

(iii) Third Period of Exegesis.—A few decades before the Council of Trent, Protestantism began to appear in various forms in parts of the Church, and its results were felt not merely in the development of this theology, but also in Biblical literature. We shall, therefore, have to distinguish after this between Catholic and Protestant exegesis.

(a) Catholic Exegesis.—Catholic exegesis, as we understand the term, is a form of exegesis that is characterized by a strict adherence to the literal sense of the text, and by a method of interpretation that is based on the authority of the Church. The first step in the development of Catholic exegesis was the publication of the Vulgate, which was the official version of the Bible used by the Church. The revised Clementine edition of the Vulgate appeared in 1592; the Antwerp Polyglot, in the years 1560-1572; and the Paris Polyglot, in the years 1629-1645. The introductory questions were treated by Sixtus Senensis (d. 1569), Christ. Adrichomius (d. 1585), Flaminius Nobilius (d. 1590), Ben. Arias Monb. (d. 1594), Robert of Denzig (d. 1619), Johann Morinus (d. 1659), and Franc. Quaresimus (d. 1660). All or most of the books of Scripture were interpreted by Sa (d. 1506), Mariana (d. 1624), Tirinus (d. 1636), La Cippe (d. 1637), Gordon (d. 1641), Menochius (d. 1655), de la Haye (1661). Select books of both the Old and the New Testament were commented upon by Jan. Balde (d. 1620), G. Francisci (d. 1628), B. Ribera (d. 1594), C. de la Haye (d. 1620), S. L. S. de la Haye (d. 1620), and Lorinus (d. 1634). Certain books of the Old Testament were explained by Andreas Masius (d. 1573), Forerius (d. 1581), Prades (d. 1595), Villalpandus (d. 1608), Genebrardus (d. 1597), Agellius (d. 1608), Peregrus (d. 1610), Card. Bellarmine (d. 1621), Sanctius (d. 1628), Malvenda (d. 1624), D. de Pineda (d. 1637), Bonfrereus (d. 1642), de Muis (d. 1644), Chislerus (d. 1646), de Salazar (d. 1646), and Corderius (d. 1655). Finally, all or part of the books of the New Testament found interpreters in Salmeron (d. 1585), Card. Toletus (d. 1595), Estius (d. 1613), de Alcazar (d. 1613), and Ben. Justinius (d. 1622). It must be noted here that several of the foregoing writers admit a multiple literal sense, and apply to the various explanations of the same words as equally true.

(b) The Transition Period, 1660-1800.—During this period, historical studies were more cultivated than scholastic. It is here that we meet with the father of the historical and critical introduction, Lawrence Simon (d. 1712). Frezen (d. 1711) adopts more of the scholastic method, but there is a return to the historical in the case of Bern. Lamy (d. 1715), Daniel Huet (d. 1721), and Nat. Alexander (d. 1722). The bibliography of exegesis was treated by Bartoccini (d. 1857), Imbonatus (d. 1694), Dupin (d. 1719), Lelong (d. 1721), and Desmoule (d. 1760). Old documents belonging to Scriptural studies were edited by...
EXEGESIS

15. de Montfaucon (d. 1741), P. Sabatier (d. 1742), and Jos. Blanchinus (d. 1764), while Calmet (d. 1757) and Bossuet (d. 1704) are noted for their exegetical work. Bakunot (d. 1710) has recourse to the original texts in order to explain doubtful or obscure readings in the Vulgate. If one compares this period with the preceding, one is struck with its poverty in great Biblical scholars; but textual criticism is fairly well represented by Houbigant (d. 1784) and de Rossi (d. 1831).

(y) Recent Times.—The perturbed state of the Church at the beginning of the nineteenth century interfered with the peaceful progress of any kind of ecclesiastical study. After peace had returned, the study of Sacred Scripture flourished more lustily than ever. In three respects, the modern commentary surpasses that of any past age: First, the interpreter attends in our times not merely to the immediate context of a phrase or a verse, but to the whole literary form of the book, and to the purpose for which it was written; secondly, he is assisted by a most abundant wealth of historical information practically unknown in former days; thirdly, the philology of the sacred tongues has been highly cultivated during the last century, and its rich results are laid under contribution by the modern commentator. It would lead us too far here were we to rehearse the history of all the recent excavations and discoveries, the contending schools, the various schools of literary criticism, the study of ancient languages, the results of literary criticism, archaeology, and history of religion; it must suffice to say that the modern commentator can leave none of these various sources of information unnoticed in so far as they bear on his special subject of investigation. It would be inviolate to mention only some names of modern scholars, excluding others; such, however, its literary revelation must have drawn attention, to the French series of commentaries entitled "La Sainte Bible avec Commentaires"; the Latin "Cursus" published by Fathers Cornely, Knabenuer, and von Hummelauer; the "Revue biblique" published by the Dominican Fathers; the "Biblische Zeitschrift"; the "Bibliischen Studien"; and the "Dictionnaire de la Bible". While the two series of commentaries offer the main points of information on each particular book of the Bible, as far as it could be ascertained at the time of their respective publication, the periodicals keep the reader informed concerning any new investigation or result worth knowing.

(b) Protestant Exegeses.—It will be found convenient to divide modern exegeses into three periods. The first embraces the age of the so-called Reformers, 1517-1600; the second reaches down to the beginning of rationalism, 1600-1750; the third embraces the subsequent time.

(a) Early Reformers.—The Early Reformers did not introduce any new principles of interpretation. They may speak, at times, as if they admitted only the literal sense, but they began to insist also on the importance of the allegorical. Their teaching concerning the multiplicity of the literal sense finds practical expression in their interpretation. The principle of free inquiry is claimed by the Reformers themselves, but neither theoretically nor practically granted to their followers. Both Luther's (d. 1546) and Calvin's (d. 1564) principles rest in the context of objective considerations.

(b) From the Reformers to the Rationalists.—In order to secure some unity of interpretation, the first followers of the Reformers introduced the "analogy of faith" as the supreme hermeneutic rule. But since they claimed that Scripture was their rule of faith, they experienced difficulty in properly applying their canon of hermeneutics. Finally, they were forced to regard the contents of their symbols as first principles which needed no proof. But the writers of this period produced some noteworthy treatises on Biblical antiquities. Thus Lightfoot (d. 1675) and Schöttgen (d. 1751) illustrated New Testament questions from rabbinic sources; Reland (d. 1718) wrote on sacred geography; Bochart (d. 1667), on natural history; the two Buxtorfs, father (d. 1629) and son (d. 1664), Goodwin (d. 1665), and Spener (d. 1665) investigated certain civil and religious questions of the Jews. Among those who explained the sacred text, the following are worthy of mention: Drusius (d. 1616), de Dieu (d. 1642), Grotius (d. 1645), Vringer (d. 1722), Cocceius (Koeh, d. 1669), and Clericus (d. 1736). Brian Walton (d. 1638) is celebrated for the edition of the Old Testament Polyglot; his daily augmented, previous works of the same kind. The "Critici saeni" (London, 1660; Frankfort, 1696; Amsterdam, 1699), collected by John and Richard Pearsons, and the "Synopsis criticorum" (London, 1669; Frankfort, 1709), edited by Mat. Polus, may be regarded as fairly good summaries of the exegetical work of the seventeenth century.

(c) After the Rise of Rationalism.—The Arminians, Socinians, the English Deists, and the French Encyclopedists refused to be bound by the "analogy of faith" as their supreme hermeneutic rule. They followed the principle of private judgment to its last consequences. The first to adhere to the principle of Biblical rationalism was Semler (d. 1791), who denied the divine character of the Old Testament and explained away the New by his "system of accommodation," according to which Christ and the Apostles only conformed to the views of the Jews. To discover the true teaching of Christ, we must first eliminate the Jewish doctrines, which may be learned from the books of Josephus, Philo, and other Jewish writers.

—Kant (d. 1804) destroyed the small remnant of supernaturalism in Jewish teaching by the system of "authentic interpretation"; we must not seek to find what the Biblical writers said, but what they should have said in order to remain within the range of the natural Kansian religion. But this did violence to the historical character of the Biblical records; H. E. G. Paulinus (d. 1831) apparently does justice to the historicity of the Bible, but removes from it all miracles by means of his "nolitio-philosophical" or "psychological" system of interpretation. He distinguishes between the fact or the occurrence to which the witnesses testify and the judgment of the fact or the particular view which the witnesses took of the occurrence. In the New Testament, e. g., we have a record of the views of the Disciples concerning the events in Christ’s life.—This interpretation leads to the adoration of Christ, and the trinity intact. Hence David F. Strauss (d. 1875) applied to the New Testament the system of Biblical mythism, which Semler, Eichhorn, Vater, and de Wette had employed in their explanation of part of the Old Testament; about thirty years after its first appearance, Strauss’ system was popularized by E. Renan. A great many Protestant commentators have adhered to the system of "authentic interpretation" of the Sacred Scriptures, though they might adhere to the general outlines of the Jewish and the Gospel history. The principles which are at least implicitly maintained by the mythists, are the following: First, miracles and prophecies are impossible; secondly, our religious sources are not really historical; thirdly, the history and religion of Christ are not necessarily identical; fourteenth, the Messianic idea of the New Testament was adopted from the Old, and all the traditional traits of the Messias were attributed to Jesus of Nazareth by a really myth-forming process. But as it was hard to explain the growth of this whole Christian mythology within the narrow space of forty or fifty years, Ford, Clark, Bauer (d. 1860) reconstructed the origin of the Christ Myth of the Christians, making it a compromise between Judaism and universalistic Christians, or between the Petrine and the Pauline parties. Only Rom., I and II Cor., Gal. are...
authentic; the other books of the New Testament were written during or after the amalgamation of the two parties, which occurred in the second century. The adherents of this opinion form the New Tübingen or the so-called “New School,” who, however, admit that the late origin of the New Testament has been abandoned by the great majority of Protestant commentators who have ranked themselves among the followers of Harnack; but the opinion that the Sacred Books of the New Testament lack historicity in its true sense, is more common than ever.

In all this, we have to distinguish between the various classes of exegetical works in order to give a true estimate of the value possessed by the numberless recent Protestant contributions to Biblical literature: their philological and historical studies are, as a general rule, of great assistance to the commentator; the same must be said of their work done in textual criticism; but their commentaries are not sound enough to elicit commendation. Some of them adhere professedly to the principles of the most advanced criticism; others belong to the ranks of the conservative; others again are more concerned with grammatical and philological than theological questions; others, finally, try to do the impossible by combining the conservative with the advanced critical principles.

When we are asked what attitude the Catholic reader ought to maintain with regard to these numerous Protestant commentaries, we answer in the words of Leo XIII, found in the Enyclicl “Providentissimus Deus”: “Though the studies of non-Catholics, used with prudence, may sometimes be of use to the Catholic student, he should, nevertheless, bear well in mind—as the Fathers also teach in numerous passages—that the sense of Holy Scripture can nowhere be found incorrupt outside of the Church, and cannot be expected to be found in writers who, being without the true faith, only gnaw the bark of the Sacred Scripture, and never attain its pith.”

Manoel R. Vidal, de la Bible s. v. Hermeneutica: Schanze in Kirchenz., s. v. Erzgebirge. Zabemth., Hermeneutica Bibl. (Freiburg, 1897); Diller, Compendium herm. bibl. (Paderborn, 1898); Chauvin, Lecons d’introduction générale, théologique, historique et critique aux diverses Écritures (Paris, 1898); Sene- pin, De divina scriptoria caruunic interprettatione brevi insti- tutio (Lyebach, 1898); Leith, Compendio de la interpretación de las Escrituras (Lyebach, 1898); Corny, Introductio in Libros Sacros (Paris, 1893 and 1894). Nearly every work on hermeneutics will contain a list of less complete list of post-literature. As to the Latin Fathers and writers, the reader may consult Mime, P. L. CXXIX, 79-54. See also Origen, De principiis, IV, viii-x; St. Augustin, De septem regulis; Augustine, De doctrina christi.; Iulius, De partibus divinae legis; Vincent de Lirino, Comentariois Eclesiasticis, Liber formulario spiritualett intelligibile; Cassendorus, De institutione divinarum literarum; Kohn, Theo- dox de Magnentia, and Jansenius Africanus (Freiburg, 1898). For the mediae aetas consult: Ribarenus Marck, De ecclesi- rum institutiones, III, vii-xvii; Hugh of St. Victor, Erudit. dilat. Lib. V; and Bajter, De, Anabrense, Propo- nentum de senis libelli scripturae sacram in Opera (Paris, 1668), I. p. 515. After the rise of the Reformazio: Pagnino, Isagoges seu introduzzioni ad sacras scripturas liber unus (Lyons, 1528, 1536); Sixtus Senensis, Bibliotheca sacra (Venice, 1566); the reader will find a number of works belonging to this period in W. von der Heydt, Sive canonica cum Expositio; Compendium Comptuum. Among Protestant works we may notice: Briggs, General Introduction to the Study of Holy Scriptures (New York, 1899); Fairthorn, Hermeneutisca doctrina (Lyons, 1568); Biflorub, Bibliotheca He- rmenectica (New York, 1883); Davidson, Sacred Hermeneutics (Edinburgh, 1844).

A. J. Maas.

Exemption is the whole or partial release of an ecclesiastical person, corporation, or institution from the authority of the ecclesiastical superior next higher in rank, and the placing of the person or body thus released under the control of the authority next above the ecclesiastical superior who would have had authority under the highest authority of all, the pope. Originally, according to canon law, all the subjects of a dio- cese, and all diocesan institutions, were under the authority of the bishop. On account of the oppressive manner in which bishops at times treated the monas- teries, these were soon taken under the protection of synods, princes, and popes. The papal protection often developed later into exemption from episcopal authority. The first privilege of this kind was given by Pope Honorius I, in 628, to the old Irish monastery of Bobbio, in Upper Italy (Jaffé, Regesta Pont. Rom., no. 17). Since the eleventh century, papal activity in the matter of reforms has been a frequent source or occasion of exemptions; in this way the monks became more closely bound to the popes, as against the bishops, many of whom were often inimical to the holy power. It is true that not only individual monasteries, but also entire orders, received exemption from the authority of the local ordinary. Moreover, from the reign of Urban II, the broadly general "protection" of the Holy See (libertas Romana), which many monasteries enjoyed, came to be regarded as exemption from the authority of the bishop. From the twelfth century, it may be said the exemption of orders and monasteries became the rule. Exemptions were also granted to cathedral chapters, collegiate chapters, parishes, communities, ecclesiastical institutions, and single individuals. Under these circumstances the diocesan administration of the bishops was frequently crippled (Trent, sess. XXIV, De ref. c. xi); consequently the bishops complained of such exemptions, while, on the other hand, the parties exempted were wont to abuse the privilege for their own uses. The major privileges. The Council of Trent sought to correct the abuses of exemption by placing the exempt, in many respects, under the ordinary jurisdiction of the bishops, or at least under the bishops as papal delegates. This provision of the council was never fully executed, owing to the frequent opposition of the monasteries. About the beginning of the nineteenth century, however, many monasteries were suppressed by the process known as secularization, in part accepted by the Holy See. In some countries more recent civil legislation does not permit exemption.

Exemption, as a rule, arises when the privilege is granted by competent authority (exemptio dativa). It can also rest on immemorial use (exemptio prorsusiva). Finally exemption can be original (exemptio nativa), when the respective church or monastery has always been free and distinct from the later diocesan organization. The claimant of exemption must prove the fact.

Exemption ceases by the complete or partial withdrawal of the privilege by the giver, by customary extinction, or by extinction by operation or by extinction of the rightful subject of the privilege.

Another kind of exemption applies to bishops, when released from the authority of the metropolitan, either at their own request or as a gracious act on the part of the Apostolic See, under whose direct control they are then placed. However, to prevent injury to the Church, the bishops, thus made independent of their proper metropolitan, are obliged to attend the synods of the province for which they have opted. Bishops who had not connected themselves with any provincial synod were summoned, by Benedict XIII, to attend the Roman one of 1725. Exception also frequently occurs in connexion with the system of military chaplaincies. In Austria, since 1720, the "Feldbischöfe" (or field bishops) were nominated by the emperor. In Prussia, since 1868, the "Feldpropst", a lay provost, is appointed by the pope after nomination by the German emperor. In France military chaplains who serve permanent garrisons remote from a parish church were exempt. In Spain and elsewhere vicarii castrenses generales, i.e. army vicars-general, are appointed. A still later exemption, as applied to monasteries and churches, exemption is known as passiva or activa. In the former case the jurisdiction of the monastic or ecclesiastical prelate is confined to the ecclesiastics and laity belonging to his monastery or church. On the other hand, prelates
having “active” exemption may exercise a more extensive jurisdiction. They are (1) those who have certain episcopal rights over a clearly defined territory otherwise belonging to the diocese, and are known canonically, as praebati nulius (i.e. dieceeses) cum território conjuncto; (2) those who have episcopal jurisdiction over a definite territory entirely distinct from the diocese, and known as praebati nulius cum território separato. The latter are praebati nulius in the proper sense; such, e.g. are the abbots of Monte Cassino, in Italy, and of St. Moritz, and Einsiedeln, in Switzerland, and others, who exercise by letter the same rights and privileges as a bishop. They may sit and vote in a general council, make laws within their proper territory, exercise canonical jurisdiction in matrimonial, disciplinary, and criminal matters. They may also grant faculties to hear confessions, reserve to themselves the right of absolving from certain sins, inflict ecclesiastical punishments and censures, grant faculties for preaching, make visitations within their jurisdiction, found an ecclesiastical seminary for priests, and appoint a vicar-general. Correspondingly, such a prelate must reside in his district, offer the Holy Sacrifice for the people, every Sunday and feast day, go at stated times to visit the Apostolic See (visita duo Limina Apostolorum), and attend the synod of the See of his country. He is not, however, obliged to attend the diocesan synod. As a rule, such prelates are not consecrated bishops. They must consequently apply to some bishop of their own choice for the confirmation of their subjects, and for the consecration of the holy oils; for the ordination of their subjects, however, they must apply to the nearest bishop. When such praebati nulius are also regulars, they may confer on their subjects the ecclesiastical tonsure, and ordain to the lower orders, or to this effect grant dimissorial letters to the diocesan bishop. Without papal privilege, however, they cannot make use of the pontifical insignia (pontificalia), nor perform acts of consecration reserved to bishops. Nor can they, without papal privilege, convene a diocesan synod, appoint synodal examiners, or hold examinations for appointment to parishes.

Although regulars are, in all matters of substantial importance, exempted from jurisdiction, there remain a number of matters in which they are subject to episcopal control. Regulars living outside of their monastery are subject to the bishop as papal delegate (Conc. Trid. Sess. XXV, De regul., ch. vii). Besides the papal confirmation, the consent of the bishop is also necessary for the founding of a monastery (Conc. Trid. Sess. XXV, De regul. ch. iii). The bishop has the right to bless an abbot confirmed by the pope (Conc. Trid. Sess. XXV, De regul. ch. vi). Monasteries of men are subject to episcopal visitation only in respect of parochial work (cura animarum) carried on by them outside of the monastery (Conc. Trid. Sess. XXV, De regul., ch. xi). The bishop has the right to confer major orders on regulars, and to use the pontificalia in their churches. When the regulars have no special privilege the diocesan bishop consecrates their churches; and they must obtain episcopal permission for processions outside the immediate vicinity of their churches. They must also ask the episcopal blessing before they can preach (coram episcopo) in churches of the order, while, in order to preach in any other than their own churches, canonical authorization (missio canonica) must be obtained from the bishop (Conc. Trid. Sess. V, De ref. ch. ii). To hear the confessions of the laity, and to grant absolution in cases reserved to the bishop, regulars require episcopal approval (Conc. Trid. Sess. V, De ref. ch. ii). The writings and books of regulars must be submitted, before publication, to the diocesan censor for the place of issue (Leo XIII, “Officiorum ac munere”, 25 January, 1897, no 30). It is also obligatory, on members of orders, to observe the ordinances of the bishop respecting the Church feast days, church services, and processions (Conc. Trid. Sess. XXV, De regul., ch. xii, and infra).

The rights of the bishop in respect to exempt orders of women are still more extensive. The bishop, or his representative (commissarius), presides at the election of abbesses, prioresses, or superiors (Conc. Trid. Sess. XXV, De regul. ch. vii). The right to visit canonically religious houses of women belongs to the bishop; he is charged in particular, with the entire superintendence of the observance of the cloister or cloister (Conc. Trid. Sess. XXV, De regul. ch. v.). The bishop appoints the confessor, ordinary and extraordinary, for religious houses of women; in cases where such appointment belongs to some one else the bishop must, at least, give his approbation (Conc. Trid. Sess. XXV, De regul. ch. xii). It is the bishop who examines into, either personally, or by representative, the voluntary election and control of candidates into orders for women, both when they put on the habit of the order, and when they make their profession (Conc. Trid. Sess. XXV, De regul. ch. xvii). It is the bishop, finally, who audits the management of the property of female orders and religious houses. For exemption of ecclesiastics from secular jurisdiction see IMMUNITY.

Exequatur (synonymous with Regium Placet), as the Jansenist Van Espen defines it, is a faculty which civil rulers impart to a Bull, papal Brief, or other ecclesiastical enactment in order to give it binding force in their respective territories. This faculty is conceded after ecclesiastical laws have been enacted or have been laid down in the first instance by the civil rule, and then drafted into the law of the Church, being formally considered as an authority not belonging to any particular country. In both cases, however, state authorities have the power of examining church laws and giving permission for their promulgation, by which permission ecclesiastical decrees acquire legal value and binding force. As to the origin of this supposed right of the State over the Church, it is now beyond doubt, contrary to the assertions of Gallicans and Jansenists, that no trace of it can be found in the early centuries of the Church, or even as late as the fourteenth century. It is true that during all that period of time General Councils, like those of Nicaea and Ephesus, requisitioned the sanction of State authorities for ecclesiastical laws; it was not, however, juridical, but only physical, force that was then invoked for ecclesiastical decrees, in order to enforce their execution by the secular arm. Moreover, had such a power in the State been at that time known, rulers of nations who were sometimes anxious to prevent the promulgation and execution of papal Constitutions in their domains would have readily appealed to it, instead of resorting to the more difficult method of extending their temporal jurisdiction, which could impede in every possible way papal letters from ever being introduced into their dominions, e.g. in the conflicts of Philip the Fair of France with Boniface VIII, and of Henry II of England with Alexander.
III. The Regium Placet really dates from the great Western Schism, which lasted from the pontificate of Urban VI to the Council of Constance and the election of Martin V (1378–1417). In order to guard against spurious papal letters issued by antipopes during the schism, Urban VI granted to some ecclesiastical superiors the faculty of examining papal Constitutions and ascertaining their authenticity before promulgation and execution. Civil authorities felt bound to adopt the same precautionary measure, though they did not attribute such a power to themselves as a right attached to their office; apparently its use was discontinued when, after the schism, Martin V condemned the Regium Placet as one of his Cum Romana data (1418). In the fifteenth century, however, it was revived in Portugal by King John II and claimed by him as a right inherent in the crown. In the sixteenth century the Vicerey of Naples, the Duke of Alcalá, made it obligatory by law, and in the seventeenth century it was introduced into France in order to preserve the so-called Gallican Liberties, and afterwards into Spain, Belgium, Sicily, Naples, and other countries.

In theory this supposed right of the State was first professed and defended as a true doctrine by Luther, Pasquier Quesnel, and other heretics who denied the supreme jurisdiction of the pope; later on it was advocated by Galileans and Jansenists, e. g. Van Espen, Febbronius, De Marea, and Stockmans, who advocated it as a means of self-defence against possible attempts of the Church to injure the rights of civil society. More recently it has been defended with particular vigour by Italian jurists and statesmen, e. g. Cavallari, Mancini, Piola, apropos particularly of the "Law of Guarantees" passed in 1871 by the Italian Government in favour of the Holy See. However, it is not only historically erroneous, as shown above, that such a right has been exercised from time immemorial, but it is also juridically false that such power naturally belongs to the State, particularly as a necessary means of self-defence. The injustice of that claim and the consequent usurpation of authority by the State appear manifest in the light of Catholic faith. If the bishop or the head of the church laws depended on the appro\al and consent of the State, it would no longer be true that the Church received legislative power directly from her Divine Founder, and that whatever is bound or loosed by the Church on earth, will be bound or loosed in heaven (Matt., xvi, 19). Again, the Church would, in that case, immediately cease to be a supreme and self-governing subject, and would be deprived of her characteristics of unity, sanctity, catholicity, and apostolicity. Moreover, the use of the Exequatur to prevent possible usurpation of rights is contrary not only to Divine law but also to natural social law and is, therefore, an abuse of power, even if exercised by a State not professing the Catholic religion. A possible conflict of rights of two sovereigns, or of a subject and his respective jurisdiction do not entitle one of them to impede the free exercise of its ordinary jurisdiction by the other. Differences, if they arise, may be settled by private mutual understanding or arbitration. It is needless to say that the fear of any usurpation or conflict on the part of the Church is unfounded, as appears from her doctrine and experience, as a matter of fact, never claimed the power of revising and approving civil laws before promulgation, although, indeed, past experience would justify her in fearing on the part of the State usurpation of her powers. She contents herself with condemning civil laws after promulgation, if they are injurious to Catholic interests. We need not wonder, then, that the Church has always condemned the doctrine and use of the Regium Placet. Boniface IX first condemned it in his Constitution "Intenta Salutis" and after him a great number of pontiffs, down to Pius IX in Propositions 28 and 29 of the Syllabus "Quanta Curare" and in the Allocution "Lactitus Exagiti" (12 March, 1857), also the Vatican Council in the Constitution "De Ecclesiis Christi". To assert an liberties and persecutions, the Church has made minor concessions in favour of the State as to the exercise of the Regium Placet. In some other instances she has tolerated its acknowledgment by ecclesiastics, particularly to enable them to take possession of benefices and other temporalities. At present the Exequatur, or Regium Placet, is seldom, if ever, used, at least in its fullness, by modern civil rulers. In the Kingdom of the Two Sicilies, for instance, it was abolished as early as 1818, and in Austria by that of 1855. It must likewise be regarded as abolished in Spain, France, Portugal, and Hungary. According to Aichner, it exists still, but in a mitigated form, in Saxony, Bavaria, and some parts of Switzerland. In Italy the strict Exequatur, i. e. previous to promulgation of papal Constitutions, is not in use, but it is retained in a mild form for the possession of ecclesiastical benefices. According to the "Law of Guarantees" (13 July, 1871), ecclesiastics who have been provided with benefices must present the Bull of their appointment to the State authorities; after approval the latter concede the Exequatur and put the incumbents of benefices in possession of the temporalities hitherto controlled by the government. In this form the Exequatur is not a right, but a necessity, and it is not a recent institution, as Leo XIII complained in a letter written to his Secretary of State Cardinal Nina (27 August, 1878).

Exequatur, Spiritual. See Spiritual Exercises of Saint Ignatius.

Exeter (Exonia, Isca Dumniorum, Caer Wise, Exaneceter), Ancient Diocese of (Exoniensis), in England, chosen by Lefric, Bishop of Crediton, as his cathedral by Nicholas of Breakspeare, who had been formed part of the Diocese of Wessex. About 703 Devonshire and Cornwall became the separate Bishopric of Sherborne and in 900 this was divided into two, the Devonshire bishop having his cathedral at Crediton. The two dioceses were again united when Lefric became first Bishop of Exeter. The present cathedral was begun by Bishop Quivil (1280–1291), continued by Byttton and Stapeldon, and completed by the great Bishop Grandisson during his long pontificate of forty-two years, who left it much as it now stands. In many respects it resembles the French cathedrals rather than those of England. The special features of the cathedral are the tower and transept towers. The latter contains much early stained-glass and a magnificent episcopal throne, and is separated from the nave by a choir-screen of singular beauty (1324). The absence of a central tower and a general lack of elevation prevent the building from ranking among the greatest English cathedrals, though the statue re front is alone sufficient to render it remarkable. The bishops of Exeter always enjoyed considerable independence and the see was one of the largest and richest in England. "The Bishop of Exeter," writes
Professor Freeman, "like the Archbishop of York was the spiritual head of a separate people." The remonstrance of the see from London prevented it from being bestowed on state counsellors, so that the roll of bishops is more played for scholars and administrav, than for men who hold a large part in national affairs. This was fortunate for the diocese and gave it a long line of excellent bishops, one of whom, Edmund Lacy, died with a reputation for sanctity and the working of miracles (1455). The result of this was seen in the fidelity with which Devonshire and Cornwell adhered to the Catholic Church at a time when the clergy were being lured away by the high priest to Christ, "I adjure thee by the living God . . . ." The non-intensive ἐργασία and the noun ἐργαστής (exorcist) appear in Acts xix, 13, where the latter (in the plural) is applied to certain strolling Jews who professed to be able to cast out demons. Expulsion by adoration is, therefore, the primary meaning of exorcism, and when, as in Christian usage, this adoration is in the name of God or Christ, exorcism is a strictly religious act or rite. But in ethnic religions, and even among the Jews from the time when there is evidence of its being in vogue, exorcism as an act of religion is largely replaced by the use of mere magical and superstitious means, to which non-Catholic writers at the present day sometimes give unfairly Christian connotations. While this connotation ought not to be confounded with religion, however much their history may be interwoven, nor magic, however white it may be, with a legitimate religious rite.

In Ethnic Religions: The use of protective means against the real, or supposed, molestations of evil spirits naturally follows from belief in their existence and is, as a result, often derived from the religions, savage and civilized. In this connexion only two of the religions of antiquity, the Egyptian and the Babylonian, call for notice; but it is no easy task, even in the case of these two, to isolate what bears strictly on our subject, from the mass of mere magic in which it is embedded. The Egyptians ascribed certain diseases and visits from other evils to demons, and believed in the efficacy of magical charms and incantations for banishing or dispelling them. The dead more particularly needed to be well fortified with magic in order to be able to accomplish in safety their perilous journey to the underworld (see Budge, Egyptian Magic, London, 1899). But of exorcism, in the strict sense, there is hardly any trace in the Egyptian records.

In the famous case where a demon was expelled from the daughter of the Prince of Bekhten, human ministry was unavailing, and the god Khonsu himself had to be sent the whole way from Thebes for the purpose. The demon gracefully retired when confronted with the god, and was allowed by the latter to be treated to a grand banquet and being departing to "his own place" (op. cit. p. 206 sq.). Babylonian magic was largely bound up with medicine, certain diseases being attributed to some kind of demonical possession, and exorcism being considered the easiest, if not the only, way of curing them (Saye, Hibbert Lect. 1887, 310). For this purpose certain forms of exorcism were employed, in which some god or godesses, or some god and goddess, was invoked to conjure away the evil one and repair the mischief he had caused. The following example (from Saye, op. cit., 411 sq.) may be quoted: "The (possessing) demon which seizes a man, the demon (ekimma) which seizes a man; The (seizing) demon which works mischief, the evil demon, Conjurer, O spirit of heaven; conjure, O spirit of earth. For the evil demon, Conjurer, Babylonian Magic and Sorcery (London, 1896).

Among the Jews: There is no instance in the Old Testament of demons being expelled by men. In Tobias, viii, 3, it is the angel who "took the devil
and bound him in the desert of upper Egypt"; and the instruction previously given to young Tobias (VI, 18, and 19), to roast the fish's heart in the bridal chamber, would seem to have been merely part of the angel's plan for concealing his own identity. But in extra-canonical Jewish literature there are incantations for exorcising demons, examples of which may be found in the Talmud (Schabath, xiv, 3; Abod Zara, xii, 2; Sanhedrin, x, 1). These were sometimes inscribed on the interior surface of earthen bowls, a collection of which (estimated to be from the seventh century A. D.) is preserved in the Royal Museum in Berlin; and inscriptions from the collection have been published, and translated, by Wohleben in the "Zeitschrift fuer die neutestamentliche Wissenschaft" (Dec. 1906). The chief characteristic of these Jewish exorcisms is their naming of names believed to be efficacious, i. e., names of good angels, which are used either alone or in combination with El (= God); indeed reliance on mere names had long before become a superstition with the Jews, and it was considered most important that the appropriate names, which varied for different times and occasions, should be used. It was this superstitious belief, no doubt, that prompted the sons of Sceva, who had witnessed St. Paul's successful exorcisms in the name of Jesus, to try on their own account the formula, "I conjure you by Jesus whom Paul preacheth", with results disastrous to their credit (Acts, xix, 13). It was a popular Jewish belief, accepted even by a learned Catholic like Theodoret (Liturgy, iii, 49). Sometimes the power involved in the composition was that of expelling demons, and that he had composed and transmitted certain formularies that were efficacious for that purpose. The Jewish historian records how a certain Eleazar, in the presence of the Emperor Vespasian and his officers, succeeded, by means of a magical ring applied at the nose of a possessed person, in drawing out the demon of a certain Roman woman, being due to the fact that it enclosed a certain rare root indicated in the formula of Solomon, and which it was exceedingly difficult to obtain (Ant. Jud. VIII, i, 5; cf. Bell. Jud. VII, vi, 3).

But superstition and magic apart, it is implied in Christ's answers to the Pharisees, who accused Him of casting out demons by the power of Beelzebub, that such success had never been achieved by anyone else in God's name: "and if I by Beelzebub cast out devils, by whom do your children cast them out?" (Matt., xii, 27). It does not seem reasonable to understand this reply as mere irony, or as a mere argumentum ad hominem implying no admission of the fact; all the more so, as elsewhere (Mark, ix, 57-58) we have an account of a person who was not a disciple casting out demons in Christ's name, and whose action Christ refused to repudiate or forbid.

EXORCISM IN THE NEW TESTAMENT: Assuming the reality of demoniac possession, for which the authority of Christ is pleaded (see Onomassio, Possession), it is to be observed that Jesus appealed to His power over demons as one of the recognised signs of Messiahship (Mark, vii, 27; ix, 17). He cast out demons. He declared, by the finger or spirit of God, not, as His adversaries alleged, by collusion with the prince of demons (Matt., xii, 24, 27; Mark, iii, 22; Luke, xi, 15, 19); and that He exercised no mere delegated power, but a personal authority that was properly His own, is clear from the direct and imperative way in which He commanded the expulsion of demons (Mark, vi, 28 sq.; Matt., xv, 22 sq.; Luke, x, 17). Sometimes again the spirits expelled were allowed to express their recognition of Jesus as "the Holy One of God" (Mark, i, 21) and to complain that He had come to torment them "before the time", i. e., the time of their final punishment (Matt., viii, 29 sq.; Luke, viii, 28 sqq.). If demonic possession was generally accompanied by some disease, yet the two were not confounded by Christ or the Evangelists. In Luke, xii, 32, for example, the Master Himself expressly distinguishes between the expulsion of evil spirits and the curing of diseases.

Christ also empowered the Apostles and Disciples to cast out demons under His name while He Himself was still on earth (Matt., x, 1 and 8; Mark, vi, 7; Luke, ix, 1; x, 17), and to believers generally He promised the same power (Mark, xvi, 17). But the efficacy of this delegated power was conditional, as we see from the fact that the Apostles themselves were not always successful in their exorcisms: certain kinds of spirits, as we are explicitly told, refused to comply with the will of their Master (Mark, vii, 22, 25; Luke, x, 40). In other words the success of exorcism by Christians, in Christ's name, is subject to the same general conditions on which both the efficacy of prayer and the use of charismatic power depend. Yet conspicuous success was promised (Mark, xvi, 17). St. Paul (Acts, xvi, 14; xii, 19), and no doubt, the other Apostles and Disciples, may have considered such occasions as an opportunity to exorcise, of their possessing power, and the Church has continued to do so uninterruptedly to the present day.

ECCLESIASTICAL EXORCISM: Besides exorcism in the strictest sense, i. e., for driving out demons from the possessed, Catholic ritual, following early traditions, has preserved certain exorcisms, under the authority of the Pope, in the form of written instructions for use by the clergy on particular occasions. The Pope has also issued these instructions for use by the laity, which are to be called for notice here. (1) Exorcism of the possessed. We have it on the authority of all early writers who refer to the subject at all that in the first centuries not only the clergy, but lay Christians also were able by the power of Christ to deliver demoniacs or engrams, and their success was appealed to by the early Apologists as a strong argument for the Divinity of the Saviour. The following is an extract from an exorcism of the fourth century (A.D. 453; Dial., 30, 85; ibid., 537, 676 sq; Minutius Felix, Octav., 27, P. L., 111; Origen, Contra Celsum, i, 25; VII, 4, 67; P. G., XI, 705, 42, 1561; Tertullian, Apol., 22, 23; P. L., 1, 404 sq; etc.). As is clear from the testimonia referred to, no magical or superstitious means were employed, but in those early centuries, as in later times, the Christian exorcist addressed the demon in the name of God, and more especially in the name of the crucified, was the usual form of exorcism.

But sometimes in addition to words some symbolic action was employed, such as breathing (insufflatio), or laying of hands on the subject, or making the sign of the cross. St. Justin speaks of demons flying from "the touch and breathing of Christians" (II Apol., 6) as from a flame that burns them, adds St. Cyril of Jerusalem (Cat., xx, 3, P. G., XXXIII, 1080). Origen mentions the laying on of hands, and St. Ambrose (Paulinus, Vit. Ambr., n. 28, 43, P. L., XIV, 36, 42). St. Ephraem Syrus (Greg. Nyss., De Vit. Ephr., P. G., XLVI, 848) and others used this ceremony in exorcising. The efficacy of it is attested by the cross that briefly and simply expressed one's faith in the Crucified and invoking His Divine power, is extolled by many Fathers for its efficacy against all kinds of demoniac molestation (Laurentius, Inst., IV, 27, P. L., VI, 531 sq; Athanasius, De Incarn. Verbi, n. 47, P. G., XXV, 180; Basil, In Isat., XI, 249, P. G., XXX, 557; Cyril of Jerusalem, Cat., XIII, 3 col. 773; Gregory, P. L., 37, 1, 3 v. 25, XXVIII, 849). The Fathers further recommend that the adjuration and accompanying prayers should be couched in the words of Holy Writ (Cyril of Jerusalem, Procat., n. 9, col. 350; Athanasius, Ad Marell., n. 33, P. G., XXVII, 45).

The present rite of exorcism as given in the Roman Ritual fully agrees with patristic teaching and is a proof of the continuity of Catholic tradition in this matter.

(2) Baptismal exorcism. At an early age the prae-
tice was introduced into the Church of exorcising catechumens as a preparation for the Sacrament of Baptism. This did not imply that they were considered to be obsessed, like demoniacs, but merely that they were, in consequence of original sin (and of personal sins in case of adults), subject more or less to the power of the devil, whose "works" or "pomps" they were called upon to renounce, and from whose dominion the grace of baptism was about to deliver them. Exorcism in this connexion is a symbolical anticipation of one of the chief effects of the sacrament of regeneration; and since it was used in the case of children who had no personal sins, St. Augustine could appeal to it against the opponents of the Church in the early days of its history.

(1) Faith in God, the Father, the Son, and the Holy Ghost, and the renunciation of false gods.

(2) Baptismal grace, the Holy Spirit, and the power of His name.

(3) Penance, which consists in the confession of sins, and their remission by means of the Sacrament of Penance.

(4) The Eucharist, in which the Church is consecrated, and the faithful are nourished with the Body and Blood of Christ, and are strengthened with the grace of the Holy Spirit.

(5) The Holy Oils, which are used in the anointing of the sick, and in the consecration of churches and ecclesiastics.

(6) The Sacrament of Marriage, which is the Sacrament of the Holy Family, and is the type of Christian marriage, and the sign of the union of the Church with Christ and with the Church with Christ.

(7) The Sacrament of Orders, which is the Sacrament of the Ministry, and is the sign of the unity of the Church with Christ, and of the unity of the Church with the Church.

The Exorcist, (1) in general, any one who exercises or professes to exercise demons (cf. Acts, XIX, 13); (2) in particular, one ordained by a bishop for this office, ordination to which is the second of the four minor orders of the Western Church. The practice of exorcism was not confined to clerics in the early ages, as is clear from Tertullian (Apologet., 25, P. L., I, 140; cf. De Idolat., 11) and Origen (C. Celsum, VII, 4, P. G. I, 1255). It was a part of the ordination of the faithful sometimes cast out demons, by a mere prayer or adjuration (Mark, xv, 17), and urges the fact as a proof of the power of Christ's grace, and the inability of demons to resist it. In the Eastern Church, a specially ordained order of exorcists (or of acolytes, or door-keepers) has never been established, but in the Western Church, these three minor orders (with that of lectors as a fourth) were instituted shortly before the middle of the third century. Pope Cornelius (251-252) mentions in his letter to Fabius that there were then in the Roman Church forty-two acolytes, and fifty-two exorcists, readers, and door-keepers (Eusebius, Hist. Eccl., VI, xiii; P. G., XX, 621), and the institution of these orders, and the organization of their functions, seems to have been the work of Cornelius's predecessor, Pope Fabian (236-231).

The fourth Council of Carthage (398), in its seventh canon, prescribes the rites of ordination for exorcist; the bishop is to give him the book containing the form of exorcism, saying, "Receive, and commit to memory, and possess the power of imposing hands on energumens, whether baptized or catechumens"; and the same rite has been retained, without change, in the Roman Pontifical down to the present day, except that instead of the ancient Book of Exorcisms, the Pontifical or Missal, is put into the hands of the ordained. From this form it is clear that one of the chief duties of exorcists was to take part in baptismal exorcism. That catechumens were exorcised every day, for some time before baptism, may be inferred from canon x of the same council. Whence it is probable that the same exorcisms have been retained by the Church to this day in her rite for solemn baptism.

(3) Other Exorcisms. According to Catholic belief demons or fallen angels retain their natural power, as intelligent beings, of acting on the material universe, and using material objects and directing material forces for the accomplishment of evil ends, and this power, which is in itself limited, is subject to the control of Divine providence, is believed to have been allowed a wider scope for its activity in consequence of the sin of mankind. Hence places and things as well as persons are naturally liable to diabolical infestation, within limits permitted by God, and exorcism in regard to them is nothing more than a prayer to God, in the name of His Church, to restrain this diabolical power supernaturally, and a profession of faith in His willingness to do so on behalf of His servants on earth.

The chief things formally exorcised in blessing are water, salt, and oil, and these in turn are used in personal exorcisms, and in blessing or consecrating places (e.g. churches) and objects (e.g. altars, sacred vessels, church bells) correctly used with public worship, or intended for private devotion. Holy water, the sacrament with which the ordinary faithful are most familiar, is a mixture of exorcised water and exorcised salt; and in the prayer of blessing, God is besought to endow these material elements with a supernatural power of protecting those who use them with faith again, against all attacks of devil and His kind. The power of this simple exorcism by means of exorcised objects is an extension of the original idea; but it introduces a new principle, and it has been in use in the Church from the earliest ages. (See also EXORCIST.)

P. J. Toner.

EXORCIST.
the most part require that the bishop should be consulted, and his authorization obtained before exorcism is attempted. The chief points of importance in the instructions of the Roman Ritual, prefixed to the rite itself, are as follows:—

1. It is lightly to be taken for granted. Each case is to be carefully examined and great caution to be used in distinguishing genuine possession from certain forms of disease.

2. The priest who undertakes the office should be himself a holy man, of blameless life, intelligent, courageous, humble; and he should prepare for the work by special acts of devotion and mortification, particularly by prayer and fasting (Martigny, 20).

3. He should avoid the course of the rite everything that savours of superstition, and should leave the medical aspects of the case to qualified physicians.

4. He should admonish the possessed, in so far as the latter is capable, to dispose himself for the exorcism by prayer, fasting, confession, and communion, and while the rite is in progress to exist within himself a lively faith in God's goodness, and a patient submission to His will.

5. The exorcism should take place in the Church or some other sacred place, if convenient; but if on account of sickness, or for other legitimate reasons, it takes place in a private house, witnesses (preferably members of the family) should be present: this is specially enjoined, as a measure of precaution, in case the subject is a woman.

6. The demon should be avoided, and the prayers and adjurations should be read with great faith, humility, and fervour, and with a consciousness of power and authority.

7. The Blessed Sacrament is not to be brought near the body of the possessed during exorcism for fear of possible irreverence; but the crucifix, holy water, and, when available, relics of the saints are to be placed near the exorcised person to prevent them being touched, and if not obtained at once, the rite should be repeated, if need be, several times.

8. The exorcist should be vested in surplice, and violet stole.

Expectation of the Blessed Virgin Mary (Exspectatio Partus B. M.). Feast of the, celebrated on 18 December by nearly the entire Latin Church. Originally connected with the celebration of feasts during Lent (a law still in vigour at Milan), the Spanish Church transferred the feast of the Annunciation from 25 March to the season of Advent, the Tenth Council of Toledo (650) assigning it definitely to 18 December. It was kept with a solemn octave. When the Latin Church ceased to observe the ancient custom regarding feasts in Lent, this octave was interdicted; the canonists have therefore considered the celebration of the feast on 25 March and 18 December, in the calendars of both the Mozarabic and the Roman Rite (Missale Gothicum, ed. Migne, pp. 170, 734). The feast of 18 December was commonly called, even in the liturgical books, "S. María de la V.," because on that day the clerics in the choir after Vespers used to utter a loud and joyous "Hosanna" as the longing of the universe for the coming of the Redeemer (Cappellari Mart. Hisp., VI, 485). The Roman "O' antiphons have nothing to do with this term, because they are unknown in the Mozarabic Rite. This feast and its octave were very popular in Spain, where the people still call it "Nuestra Señora de la V.," but is not known in the Mozarabic liturgical books. St. Hildephonsus cannot, therefore, have invented it, as some have maintained. The feast was always kept in Spain and was approved for Toledo in 1573 by Gregory XIII as a double major, without an octave. The church of Toledo has the privilege (approved 29 April, 1634) of celebrating this feast even when it occurs on the fourth Sunday of Advent. The Exspectatio Partus spread from Spain to other countries; in 1695 it was granted to Venice and Toulouse, in 1702 to the Cistercians, in 1713 to Tuscany, in 1725 to the Papal States. The Office in the Mozarabic Breviary is exceedingly beautiful; it assigns special antiphons for every day of the octave. At Milan the feast of the Annunciation is, even to the present, kept on the last Sunday before Christmas. The Mozarabic Liturgy also celebrates a feast called the Exspectation (or Advent) of St. John the Baptist on the day preceding 24 June.

Expectative (from Lat. expectare, to expect or wait for).—An expectative, or an expectative grace, is the anticipatory grant of an ecclesiastical benefice, not vacant at the moment but which will become so, regularly, on the death of its present incumbent. In 1179 the Third Lateran Council, renewing a prohibition already in existence for a long time, forbade such promises or gifts. This prohibition was further extended by Pius IV, in 1561. Until the Middle Ages expectative graces were customarily conferred upon applicants to canonical prebends in the cathedral and collegiate chapters. This fact was due to toleration by the Holy See, which even accorded to the chapters the right of nominating four canons in the way of expectative graces (cc. ii, viii, De concessione prebendae, X, III, VIII; c. ii, De concessione prebendae, X, III, VII; Constitution of Alexander IV, "Excerablis," 1254). Several chapters preferred to renounce this right; others continued to employ expectatives even contrary to the canonical enactments. The popes, especially, made use of this grace from the twelfth century. After having first asked, then ordered, the collators to dispose of certain benefices in favour of ecclesiastics whom they had previously named them, they granted, in the way of expectatives, benefices which were not at the moment vacant; they even charged another ecclesiastic with the future investiture of the appointee with the benefice. The privilege of granting expectatives was conceded also to the delegates of the Holy See, the universities, certain princes, etc., without any sort of less restriction. This practice aroused grave opposition against the benefice and grew especially during the Western Schism. The Council of Trent suppressed all expectatives excepting the designation of a conditor with the right of succession in the case of bishops and abbots; to these we may add the prelates Apostolic. (Sess. XXIV, cap. xix, De ref.; Sess. XXIX, cap. vii, De ref.). Although the Council of Trent prohibited the granting of expectatives by privileges granted by the pope, still the latter is not bound by such a prohibition. However, the only expectatives now in use are those authorized by the Council of Trent.

Expeditors, Apostolic.—(Lat. Expeditionariuslitattrarum apostolicarum, Daturio Apostoly solicitor atque expeditor, 1t. Spedizioniari). Officials who attend to the sending of papal Briefs and Rescripts, thence from the Apostolic Chancery, the Dataria, the Sacred Penitentiary, and the Secretariate of
Briefs. In a restricted and specific sense expeditors or expediters are laymen approved by the Dataria, after an examination, to act as agents for bishops or others before the Dataria or Apostolic Chancery. They are members of the Roman Court. They differ from solicitors as well as from procurores or agents in general, who transact business with the Roman Congregations. A solicitor, strictly speaking, is an assistant to a procurator, doing the mechanical work of preparing documents. An expeditor is more concerned with matters of favour, privileges, dispensations and so on, than with cases in litigation. It has been the practice of the Dataria and Apostolic Chancery that a brief is received only by the expeditor, or expeditors, whose office it is to draw up and sign the necessary documents, receive and forward the answer given. They receive a certain fixed fee for each transaction, while procurators and solicitors generally receive a monthly stipend. The number of expeditors has varied. Cardinal Pacca, pro-datarius, decided, in 1385, that the number, which was then one hundred, should be regulated by the amount of business to be transacted. In late years there were about thirty. In reorganizing the Roman Court, Pius X deprived these expeditors of their exclusive right to appear before the Dataria, and Apostolic Chancery.

Andrew B. Meehan.

Expiation, Feast of. See ATONEMENT, Day of.

Exposition of the Blessed Sacrament is a manner of honouring the Holy Eucharist, by exposing it, with proper solemnity, to the view of the faithful in order that they may pay their devotions before it. We will speak later of the conditions which constitute proper exposition. Anything must first be said of the history of the practice.

History. There can be no reasonable doubt that the practice of exposition came in with the wake of that most epoch-making liturgical development, the elevation of the Host in the Mass. The elevation itself (q.v.), of which we first hear in its present sense about the year 1200, was probably adopted as a practical protest against the teaching of Peter Comestor and Peter the Chanter, who held that the bread was not consecrated in the Mass until the words of institution had been spoken over both bread and wine. Those who believed that when the words "Hoc est enim corpus meum" had been pronounced, the bread was at once changed into the flesh of our Lord, supported their opinion by adoring the Sacrament, and holding it up for the adoration of the people, without water for the words to be spoken over the chalice. At Paris, this elevation became a matter of synodal precept, probably before the year 1200. Before long it came to be regarded as a very meritorious act to look upon and salute the Body of the Lord. In this way, even before the middle of the thirteenth century, all kinds of abuses grew up, nearly all of the special privileges enjoyed by him, who, on any day, saw the Body of his Maker. He was believed to be protected from sudden death, or from loss of sight. Further, on that day he would be duly nourished by the food he took, and would grow no older, with many other extravagances. The development of these popular beliefs was also probably much assisted by a legend about the elevation of the Host of the Holy Grail, then at the height of its popularity. What is certain is, that among all classes the seeing the Host, at the moment it was lifted on high in the hands of the priest, became a primary object of devotion, and various devices—for example, the hanging of a black curtain at the back of the altar, or the lighting of torches held behind the priest by a deacon or server—were resorted to, to make the looking upon the Body of Christ more easy.

Whether the institution of the feast of Corpus Christi with its procession, an innovation due to the visions of the Flemish contemplative, St. Juliana Cornelio, is to be regarded as the cause, or rather the effect, of this great desire to behold the Body of Christ is somewhat doubtful. But the evidence points to it as an effect rather than as a cause, for, even before the close of the twelfth century, we find a well-authenticated story of the last moments of Maurice de Sully, Bishop of Paris, according to which, being unable on account of sickness to receive Holy Viatum, he satisfied his devotion by having the Blessed Sacrament brought to him to gaze upon. In the twelfth century, Pacca herself, when upon her death-bed, this also seems to show that the devout longing of the faithful to gaze upon the Sacred Host was not confined to the time of Mass. Moreover, we find it debated among scholastic theologians, as early as the thirteenth century, whether the looking upon the consecrated Host was permissible to those in the state of grievous sin, and it was commonly decided that far from being a new offence against God, such an act was praiseworthy, if it were done with a reverent intention, and was likely to obtain for the sinner the grace of true contrition.

In the fourteenth century, we find the practice of Exposition already established, especially in Germany. The "Septilium" of Blessed Dorothea of Prussia who died a recluse at an advanced age in 1354, probably bears witness to the saint's extraordinary desire to see the Blessed Sacrament, a desire which was sometimes gratified as often as a hundred times in one day, but also incidentally mentions that in certain churches near Dantzig, the Blessed Sacrament was reserved all day long in a transparent monstrance, so that pious persons like Dorothea could come to pray before it. The tradition of exposition is, however, confined especially in Germany and the Netherlands. In the fifteenth century, we find numerous synodal decrees passed, prohibiting this continuous and informal Exposition, as wanting in proper reverent. The decree enacted at Cologne in 1452, under the presidency of Cardinal Nicholas de Cusa, altogether forbids the reserving, or carrying of the Blessed Sacrament in such a way, except during the octave of Corpus Christi. An earlier decree passed at Breslau, in 1116, speaks of permission having previously been given "for the Body of Jesus Christ, on some few days of the week, to be visibly exposed and shown to public view". But the bishop declares that he has perceived, that, "by this frequent exposition, the indulgence of the faithful is the more little use, and the reverence is lessened". It is clear that these prohibitions did not eradicate the custom, but they seem to have led to a curious compromise, by which the Blessed Sacrament, throughout a great part of central Europe, was reserved in "Sakramenstainenheid" (Sacrament houses), often beautifully carved of stone, and erected in the most conspicuous parts of the churches. There the Sacred Host was kept in a transparent vessel, or monstrance, behind a locked metal door of lattice work, in such a way that the Host could still be dimly seen by those who prayed outside. In the convent of Vadstena in Sweden, the motherhouse of the Brightines, we have record of the erection of such a Sacrament House, in 1431, in the following terms: "Theophanes, bishop, on the 4th of September in the year 1431, in the presence of the monks and other religious, erected for the Holy Sacrament, a cabinet, sive columna, pro Corpore Christi, et monstrancia ibi posita cum lampade".

Another custom which seems to have been very prevalent in Germany and the Netherlands, before the close of the fifteenth century, was the practice of exposing the Blessed Sacrament during the time of Mass, apparently to add solemnity to the Holy Sacrifice thus offered. Numerous papal permissions for such Exposition will be found in the "Regesta" of Pope Leo X. (See e.g. 3 Nov., 1514; 20 Nov., 1514;
etc.) This practice is still a very favourite one in Belgium, though it seems directly to contravene the spirit of many directions in the official "<i>Caritomani Episcoporum</i>" prescribing that the Blessed Sacrament should, when possible, be removed from the altar at which High Mass is to be celebrated (Cer. Episc. I, XIX, 40). Before the Council of Trent, the abuse of such frequent expositions, in Germany and elsewhere, seems to have been very much checked, if not entirely eliminated. In the sixteenth century and subsequently, the developments of popular devotion in this matter have been much more restrained, and they have always been subject to strict episcopal supervision. The practice of the Forty Hours' Devotion, and those other expositions as the Perpetual Eucharistic, are treated separately, and the reader may be referred to the articles in question. But a good many other varieties of services, involving Exposition of the Blessed Sacrament for a longer or shorter period, began to prevail in the time of St. Philip Neri and St. Charles Borromeo. Of such a variety known as the <i>Oraio sine intervallis</i>, and dating at least from 1574, a full account will be found in the "Acta Mediolanensis Ecclesiae". Not very long after this, we begin to come across various religious institutes founded, with the permission of the Holy See, for the express purpose of maintaining the perpetual adoration of the Blessed Sacrament. See the article <i>Adoration, Perpetual</i>, where details are given. In most cases, the Blessed Sacrament is exposed upon the altar, though in some religious institutes of this kind the exposition is only continued by day.

**Conditions Regulating Exposition.** — The Church distinguishes between private and public Expositions of the Blessed Sacrament; and though the former practice is hardly known in northern Europe, or in practice with the exception of the occasional permission of the parish priest to permit such private exposition for any good reason of devotion, by opening the tabernacle door and allowing the ciborium containing the Blessed Sacrament to be seen by the worshippers. There is, however, in this case no enthroning of the Blessed Sacrament or use of a monstrance. Public Exposition of the Blessed Sacrament may not be given in places where there is no permission, unless it be previously obtained by the ordinary. In English-speaking countries, a monstrance is almost always used when the Blessed Sacrament is set upon Its throne, but in Germany, one frequently sees simply the ciborium, covered of course with its veil. A certain solemnity and decorum in the matter of lights upon the altar, incense, music, and attendance of worshippers is also required, and bishops are directed to refuse permission for public exposition where these cannot be provided for.

When Mass is celebrated, or the Divine Office recited, at the altar upon which the Blessed Sacrament is exposed, a new set of rubrics comes into force, birettas are not worn, genuflexions on both knees are made before the altar, the incense and water are added, and the ciborium is opened. The "Caritomane" seems only to contemplate the case of Mass before the Blessed Sacrament exposed during the octave of Corpus Christi, and at the Mass of Deposition of the <i>Quarant' Ore</i>, but, as already noticed, in many parts of Europe, local custom has made these Masses before the Blessed Sacrament of very common occurrence. For the candles that ought to burn upon the altar, and for the ritual to be followed the reader may be referred to the articles <i>Benediction</i>, and <i>Forty Hours' Devotion</i>. Other rubrical directions dealing with such matters as the use of electric light, the arrangement of the throne, etc., are given in full detail in manuals like that of Hartmann, or works upon Pastoral Theology such as that of Schulze.

**Corbet, Histoire de la Sainte Eucharistie** (Paris, 1850); <i>Lupus</i>, <i>De SS. Sacrament Publico Expositu</i> (Lione, 1661); <i>Thiers</i>, <i>De Expositu sacrosancti SS. Sacramenti</i> (Paris, 1677); <i>Raille</i>, <i>De Tabernaculo et Juxta</i> (Freiburg, 1892) includes some good illustrations of German "Sacrament-houses". **HERBERT THURSTON.**

**Extension.** See Anathema; Degradation; Excommunication; Religious Orders; Low.

**Extension** (from Lat. <i>ex-tendere</i>, to spread out).—That material substance is not perfectly continuous in its structure, as it appears to our gross senses, the physical sciences have shown, as the teleological proofs in biology, the pores in the most compact matter, while the permeation of gases and even of liquids through solids indicates that the densest bodies would probably present to a sufficiently penetrating eye a sponge-like structure throughout. This fact, together with the difficulty of explaining how the senses can perceive extension, has led many theorists to deny its objectivity, although, on the other hand, the first of modern philosophers, Descartes, was so impressed by the universality of extension that he held it to be the very essence of matter. Kant makes extension a subjective form, an original condition of sensuous faculty which when stimulated by the sense-object stamps the impression accordingly. Others, with Leibniz, resolve matter into simple units (Leibniz's "monads") which by their agitation are supposed to produce in us the impression of continuous extension. Others, with Boscovich (d. 1787), sublimate matter into simple forces which some hold to be "virtually" extended. The Atomists (physical and chemical) dissolve bodies into minute particles or atoms (which some consider to be absolutely indivisible), or into only physical or chemical forces, or intermediary substance, which hitherto have defied further analysis but which may eventually turn out to be merely varying arrangements of some primordial homogeneous material, the radical constituent of the universe. The present teaching of Catholic philosophy on the subject may be summarized as follows: Extension is either successive (fluent, as that of a stream or a flame) or instantaneous (point), as either (a) continuous (mathematical, i.e. abstract, as a line; or physical), when the entitative or intangible parts into which its immediate subject, material substance, is divisible are united (perfectly or imperfectly) throughout, e.g. a homogeneous wire; (b) contiguous, when the said parts are conjoined only by contact, e.g. a brick wall; (c) interrupted, when these parts are in some degree disjoined, though connected by an intermediate, e.g. a string of beads. We are here occupied with continuous extension only.

Continuous extension may be described as that property in virtue whereof the parts into which material substance is divisible are actually arranged in orderly relation one beyond the other (internal and sequential, not external, commensurate with the corresponding parts of the immediately environing surfaces (external and actual local extension). Consequent attributes of extension are divisibility, measurability, and impenetrability. Wherein precisely the essence of extension consists, is a controverted question. Probably the more general opinion is that extension radically and essentially consists in the internal divisions. The parts into which matter is divisible, and that external extension, or the correspondence of those parts to the parts of the leating surfaces, is a sequent property of essential or internal extension. Of course this does not explain extension. Some nearer approach to an explanation may be found in the opinion of a recent writer (Pesse) who makes extension consist in the expansive and cohesive forces of matter—the former causing the said parts to spread out, the latter keeping them united.
Continuous extension is an objective property of matter, not a mere mental form moulding the sensuous impression produced in the sensory organs by some sort of physical motion. What it is that extension immediately affects—whether the ultimate atoms, the constituent molecules, or the gross mass of matter—are we unable in the present stage of physical science to decide. Even should it turn out, however, as many conjecture, that the densest solid—to say nothing of a liquid or a gas—is but what might be called an "infinitely" complex arrangement of infinitesimal corpuscles—atoms or electrons—girding in a matrix of ether, continuous extension would still hold (real, objective), though it would then be the immediate property of the constituent corpuscles and the ether instead of a property of the gross mass. It is experimentally demonstrable that sensuous impressions are aroused in us by bodies as extended and resistant. Now if bodies were constituted of simple, unextended points—monads or forces—these could not stimulate the sensory organs, since such elements apart from the fact that they would all coalesce and cpenetrater, could not be the subjects of material activity (etherial or aerial vibrations, chemical reactions, i.e., the intermediate sense-stimuli). Nor could the organs evoke the sensation, since in the hypothesis they, too, being made up of unextended elements, would be incapable of evoking sensuous impressions. What motion of the supposed "points" might evoke sensation, since being unextended they would be imperceptible whether in motion or at rest.

Extension is an "absolute accident", that is not a mere mode in which substance exists, as, for instance, are motion and rest. It seems to have a certain distinct entity of its own. This, of course, would most probably never have been the case were the human mind unaided by Revelation. But given the doctrine of the Real Presence of Christ in the Sacrament of the Eucharist, wherein the extensional dimensions and sensible qualities of bread and wine persist after the conversion of the substance of the bread and wine into His Body and Blood, reason, speculating on the doctrine, discerns some grounds for the possibility of the real distinction and even severance between substance and local extension. In the first place there are motives for inferring a real distinction between substance and extension (actual and local), or, in other words, that extension does not constitute the essence of material substance (as Descartes maintained that it does): (a) substance is the root principle of action; extension as such is indifferent to any species, since shape or figure which is the dimensional termination of extension depends upon the specific form; (b) substance is identical in the entire mass and in each of its parts (e.g., in gold), while extension is not the same in the whole and in each of its parts; (d) substance is the principle of universality and the formal principle of plurality; (c) substance essentially demands three dimensions; extension may be realized in one or two; (f) substance remaining the same, extension may increase or decrease.

Given a real distinction between extension and substance, no intrinsic impossibility can be proven to exist in the case of other values, the other, for although internal extension naturally demands external, there is no evidence that the demand is so essentially imperative that Omnipotence cannot supernaturally suspend its realization and by other means afford the accidents—extension and the rest—the support which the substance naturally supplies. Since material substance is the substance of sensory impressions, the question arises whether, independently of extension, it possesses any such parts (it, of course, possesses parts essential to corporeal substance, matter and form), or is simple, indivisible. St. Thomas and many others maintain that substance as such is indivisible. Suarez and others hold that it is divisible. For this and the other questions concerning the divisibility of extension, and the psychology of the subject, the reader is referred to the works mentioned below.

F. P. SIEGFRIED.

Extravagantes (extra, outside; vagari, to wander).

This word is employed to designate some papal decretals not contained in certain canonical collections which possess a special authority, i.e. they are not found in the Decree of Gratian or the three official collections of the "Corpus Juris" (the Decretals of Gregory IX, the Sixth Book of the Decretals, and the Clementines). The term was first applied to those papal documents which Gratian had not inserted in his "Decree" (about 1140), but which, however, were obligatory upon the whole Church, also to other decretales of a later date, and possessed of the same authority. Bernard of Pavia designated under the name of "Extravagantes" a separate book of decretals which are not part of the "Extravagantes", the collection of papal documents which he compiled between 1187 and 1191. Even the Decretals of Gregory IX (published 1234) were long known as the "Liber" or "Collectio Extra", i.e. the collection of the canonical laws not contained in the "Decree" of Gratian. This term is now applied to the collections known as the "Extravagantes Johannitae" and "Extravagantes Thesauri" of collections of canon laws of which are found in all editions of the "Corpus Juris Canonicii". When John XXII (1316-1334) published the decretals known as the Clementines, there already existed some pontifical documents, obligatory upon the whole Church but not included in the "Corpus Juris". This is why these Decretals were called "Extravagantes". Their number was increased by the inclusion of all the pontifical laws of later date, added to the manuscripts of the "Corpus Juris", or gathered into separate collections. In 1325 Zenzeslinus de Cassanis added a gloss to twenty constitutions of Pope John XXII, and named this collection "Viginti Extravagantes pape Joannis XXII". The others were known as the "Extravagantes Sententiarum". The pope gave the collection to Chappuis in the Paris edition of the "Corpus Juris" (1499-1505). He adopted the systematic order of the official collections of canon law, and classified in a similar way the "Extravagantes" commonly met with (hence "Extravagantes communes") in the manuscripts and editions of the "Corpus Juris". This collection contains decretals of the following popes: Martin IV, Boniface VIII (notably the celebrated Bull "Unam Sanctam"), Benedict XI, Clement V, John XXII, Benedict XII, Clement VI, Urban V, Martin V, Eugene IV, Callistus III, Paul II, Sixtus IV (1281-1484). Chappuis also classified the "Extravagantes" of John XXII under fourteen titles, containing in all twenty chapters. These two collections are grouped with a fourth, the one of which the "Corpus Juris Canonicii"; they possess no official value, nor has custom bestowed such on them. On the other hand, many of the decretals comprised in them contain legislation obligatory upon the whole Church, e.g. the Constitution of Paul II, "Ambitio seu", which forbade the alienation of ecclesiastical property. This, however, some had even been formally abrogated at the time when Chappuis made his collection; three decretals of John XXII, are reproduced in both collections. Both the collections were printed in the official (1852, 1894).
Extreme Union

A. Van Hove.

Extreme Union is a sacrament of the New Law instituted by Christ to give spiritual aid and comfort and perfect spiritual health, including, if need be, the remission of sins, and also, conditionally, the indelible sacramental graces, who are seriously ill; it consists essentially in the anointing by a priest of the body of the sick person, accompanied by a suitable form of words. The several points embodied in this descriptive definition will be more fully explained in the following sections into which this article is divided: I. Actual Rite of Administration; II. Name; III. Sacramental Efficacy of the Rite; IV. Matter and Form; V. Minister; VI. Subject; VII. Effects; VIII. Necessity; IX. Repetition; X. Reviviscence of the Sacrament.

I. Actual Rite of Administration.—As administered in the Western Church to-day according to the rite of the Roman Ritual, the sacrament consists (apart from certain non-essential prayers) in the using of the substance, the organs of the five external senses (eyes, ears, nostrils, lips, hands), of the feet, and for men (where the custom exists and the condition of the patient permits of his being moved), of the loins or reins; and in the following form repeated at each union with mention of the corresponding sense or faculty: “Through this holy anointing the Lord pardon thee whatever sins or faults thou hast committed [quaelibet deliquisti] by sight [by hearing, smell, taste, touch, walking, carnal delectation]”. The union of the loins is generally, if not universally, omitted in English-speaking countries, and it is of course nowhere forbidden in case of women. To perform this rite fully takes an appreciable time, but in cases of urgent necessity, when the bishop, or the priest, or the shock of disease is sufficient to prevent the patient from walking, and in this case the rite is performed by placing the oil on the anointed part (the forehead, for instance) with the general form: “Through this holy anointing may the Lord pardon thee whatever sins or faults thou hast committed.” By the decree of 25 April, 1906, the Holy Office has expressly approved of this form for cases of urgent necessity.

In the Eastern Orthodox (schematical) Church this sacrament is normally administered by a number of priests (seven, five, three; but in case of necessity even one is enough); and it is the priests themselves who bless the oil on each occasion before use. The parts usually anointed are the forehead, chin, cheeks, hands, nostrils, and breast, and the form used is the following: “Through this holy anointing the Lord pardon thee whatever sins or faults thou hast committed.” (Goar, Enchologion, p. 417.) Each of the priests who are present repeats the whole rite.

II. Name.—The name Extreme Unction did not become technical in the West till towards the end of the twelfth century, and has never become current in the East. Some theologians would explain its origin in the East. Some theologians would explain its origin in the East. The name unction was regarded as the last in order of the sacramental or quasi-sacramental unctions, being preceded by those of baptism, confirmation, and Holy orders; but, having regard to the conditions prevailing at the time when the name was introduced (see below, VI), it is much more probable that it was intended originally to mean “the union of those in extremis”, i., e. of the dying, especially as the corresponding name, sacramentum exstinguum, came into common use during the same period. In previous ages the sacrament was known by a variety of names, e. g., the holy oil, or unction, of the sick, the unction or blessing of consecrated oil; the unction of God; the office of the unction; etc. In the Eastern Church the later technical name is eukatharista (i. e. prayer-oil); but other names have been and still are in use, e. g. έκκαθαρία (holy oil), έξησιμον (consecrated), θανατ, θαλαι κρέας, χρήμα, etc.

B. SACRAMENT OF THE RITE.—(A) Catholic Doctrine.—The Council of Trent (Sess. XIV, cap. i, De Extri. Unct.) teaches that “this sacred unction of the sick was instituted by Christ Our Lord as a sacrament of the New Testament, truly and properly so called, being insinuated indeed in Mark [vi, 13] but commenced to the faithful and promulgated” by James [Ep., v, 14, 15]; and the corresponding canon (can. i, De Extri. Unct.) makes it a dispensation, that it that extreme unction is not truly and properly a sacrament instituted by Christ Our Lord, and promulgated by the blessed Apostle James, but merely a rite received from the fathers, or a human invention. Already at the Council of Florence, in the Instruction of Eugene IV for the Armenians (Bull “Exultate Jerusalem.” Feb., 1439), extreme unction was established as an integral part of the fifth of the seven Sacraments, and its matter and form, subject, minister, and effects described (Denzinger, “Enchiridion”, 10th ed., Freiburg, 1908, no. 700—old no. 595). Again, it was one of the three sacraments (the others being confirmation and matrimony) which Wycliffites and Hussites were under suspicion of conferring, and about which they were to be especially moved. The canon of the Council of Trent (III, 1208) (Denzinger, no. 424—old no. 370). Thus, long before Trent—in fact from the time when the definition of a sacrament in the strict sense had been elaborated by the early Scholastics—extreme unction had been recognized and authoritatively proclaimed as a sacrament; but in Trent for the first time its institution by Christ Himself was defined. Among the older Schoolmen there had been a difference of opinion on this point, some—as Hugh of St. Victor (De Sacram., Bk. II, pt. XV, c. ii, Peter Lombard (Sent., IV, dist. xxxiii), St. Bonaventure (Comm. in Sent., loc. cit., art. i, Q. ii), and others—holding against the more common view that this sacrament had been instituted by the Apostles, the institution of the Holy Church and under His inspiration. But the Council declared it must be held as a doctrine of Catholic faith that Christ is at least the mediate author of extreme unction, i.e., that it is by His proper authority as God-Man that the prayer-unction has become an efficacious sign of grace; and theologians almost unanimously maintain that we must hold it to be at least the case that Christ, when He declared or instituted this author of this sacrament, i.e., that He Himself while on earth commissioned the Apostles to employ some such sign for conferring special graces, without, however, necessarily specifying the matter and form to be used. In other words, immediate institution by Christ is compatible with a mere generic determination by Him of the physical elements of the sacrament.

The teaching of the Council of Trent is directed chiefly against the Reformers of the sixteenth century.
Luther denied the sacramentality of extreme unction and classed it among rites that are of human or ecclesiastical institution (De Captiv. Babylonici, cap. de extr. unct.). Calvin had nothing but contempt and ridicule for this sacrament, which he described as a piece of "historian hypocrisy" (Instit., IV, xix, 18). He did not deny that the Jacobean rite may have been a sacrament in the Early Church, but held that it was a mere temporary institution which had lost all its efficacy since thecharisma of healing had ceased (Comm. in Ep. Jacobi, v, 14, 15). The same position is taken by some of his more Roman Catholic followers, as, for example, by a Calvinistic body. In the first edition (1551) of the Edwardine Prayer Book for the reformed Anglican Church the rite of unction for the sick, with prayers that are clearly Catholic in tone, was retained; but in the second edition (1552) this rite was omitted, and the general teaching on the sacraments shows clearly enough the intention of denying that extreme unction is a sacrament. The same is to be said of the other Protestant bodies, and down to our day the denial of the Tridentine doctrine on extreme unction has been one of the facts that go to make up the negative unanimity of Protestantism. At the present time, however, there has been a revival more or less among Anglicans of Catholic teaching and practice. "Some of our clergy," writes Mr. Puller (Anointing of the Sick at the Communion Table), "are so impressed with the plain injunction about Anointing in the pages of the New Testament, jump hastily to the conclusion that the Roman teaching and practice in regard to Anointing is right, and seek to revive the use of Anointing as a channel of sanctifying grace, believing that grace is imparted sacramentally through the oil as a preparation for death" (p. 307). Mr. Puller himself is probably too fair, though he pleads for the revival of the Jacobean unction, which he regards as a mere sacramental instituted for the supernatural healing of bodily sickness only. His more advanced friends can appeal to the authority of one of their classical writers, Bishop Forbes of Brechin, who admits (Exposition of the XXXIX Articles, vol. II, p. 463) that "the unction of the sick is the Lost Pleiad of the Anglican Firmament... There has been practically lost an apostolic practice, whereby, in case of grievous sickness, the faithful were anointed and prayed over, for the forgiveness of their sins, and to restore them, if God so willed, or to give them spiritual support in their maladies."

Previous to the Reformation there appears to have been no distinctive heresy relating to this sacrament in particular. The Albigenses are said to have rejected it, the meaning probably being that its rejection, like that of other sacraments, was logically implied in their principles. The abuses connected with its administration which prevailed in the twelfth and thirteenth centuries and which tended to make it accessible only to the rich, gave the Waldenses a pretext for denominating it "a false ceremony of bodily healing," and so they neglected it (cf. J. Wydcliffes and Hussites were suspected of committing extreme unction is clear from the interrogatory already referred to, but the present writer has failed to discover any evidence of its specific rejection by these heretics.

(10) Proof of Catholic Doctrine from Holy Scripture.—In this connexion there are only two texts to be discussed—Mark, vi, 13, and James, v, 14, 15—and the first of these may be disposed of briefly. Some ancient writers (Victor of Antioch, Theophylactus, Euthymius, St. Bede, and others) and not a few Scholastics saw a reference to this sacrament in this text of St. Mark, and some of them took it to be a record of its institution by Christ or at least a proof of His promise or intention to institute it. Some post-Tridentine theologians also (Maldonatus, de Sainte-Beuve, Berti, Mariana, and among recent writers, but in a modified form, Schell) have maintained that the unction here mentioned was sacramental. But the great majority of theologians and commentators have denied the sacramentality of this unction on the grounds: (1) that there is mention only of bodily healing as its effect (cf. Matt., x, 1; Luke, ix, 1, 2); (2) that many of those anointed had probably not received Christian baptism; (3) that the Apostles had not yet been ordained priests; and (4) that penance, of which extreme unction is the complement, had not yet been instituted as a sacrament. Hence the guarded statement of the text, "the sick man," or "those who are sick," is merely "insinuated" in St. Mark, i.e. hinted at or prefigured in the miraculous unction which the Apostles employed, just as Christian baptism had been prefigured by the baptism of John.

The text of St. James reads: "Is any man sick among you? Let him bring in the priests of the Church, and let them pray over him, anointing him with oil in the name of the Lord. And the prayer of faith shall save [ευαγγελίζω] the sick man: and the Lord shall raise him up [εγειράμαι]; and if he be in sins, they shall be forgiven him." It is not seriously disputed that there is question here of those who are physically ill, and of them alone; and that the sickness is supposed to be grave is conveyed by the word κακοστία and by the injunction to have the priests called in; in addition to this, the words "the priests of the church" are meant the hierarchical clergy, and not merely elders in the sense of those of mature age, is also abundantly clear. The expression τῶν πρεσβύτερων, even if used alone, would naturally admit no other meaning, in accordance with the usage of the Acts, Pastoral Epistles, and I Peter (v); but the addition of τῶν ἅγιων ἅγιων excludes the possibility of doubt (cf. Acts, xx, 17). The priests are to pray over the sick man, anointing him with oil. Here we have the physical elements necessary to constitute a sacrament in the strict sense; oil as remote matter, like water in baptism; the anointing as proximate matter, like immersion or infusion in baptism; and the accompanying prayer as form. This rite will therefore be a true sacrament if it has the sanction of Christ's authority, and is intended by its own operation to confer grace on the sick person, to work for his spiritual benefit. But the words "in the name of the Lord" here mean "by the power and authority of Christ", which is the same as to say that St. James clearly implies the Divine institution of the rite he enjoins. To take these words as referring to a mere invocation of Christ's name—which is the only sense in which the term "sacrament" would be to see in them a needless and confusing repetition of the injunction "let them pray over him". But this is rite recommended by St. James as an operative sign of grace? It may be admitted that the words "the prayer of faith shall save the sick man; and the Lord shall raise him up", taken by themselves and apart from the context, might possibly be applied to cases of healing that follow, "and if he be in sins, they shall be forgiven him", speak expressly of a spiritual effect involving the bestowal of grace. This being so, and it being further assumed that the remission of sins is given by St. James as an effect of the prayer-unction, nothing is more reasonable than to hold that St. James is thinking of spiritual as well as of bodily effects when he speaks of the sick man being "saved" and "raised up".

It cannot be denied that in accordance with New-Testament usage the words in question (especially the first) are capable of conveying this twofold meaning, and it is much more natural in the present context to suppose that they do convey it. A few verses further on the predominating spiritual and eschatological connotation of "saving" in St. James is made clear in the expression, "shall save his soul from death" (v, 20), and without necessarily excluding a reference to deliverance from bodily death in verse 15,
we are certainly justified in including in that verse a reference to the saving of the soul. Much more, the Apostle could not, surely, have meant to teach or imply that every sick Christian who was anointed would be cured of his sickness and saved from bodily death; yet the unction is clearly enjoined as a permanent institution in the Church for all the sick faithful, and the saving and raising up are represented absolutely as being the normal, if not infallible, effect of its use. We know from experience (and the same has been known and noted for centuries) that the unction of bodily health does not as a matter of fact normally result from the unction, though it does result with sufficient frequency and without being counted miraculous to justify us in regarding it as one of the Divinely (but conditionally) intended effects of the unction. Are we to suppose, therefore, that St. James thus solemnly recommends universal recourse to a rite which, after all, will be efficacious for the purpose intended only by way of a comparatively rare exception? Yet this is what would follow if it be held that there is reference exclusively to bodily healing in the clauses which speak of the sick man being saved and raised up, and if further it be denied that the remission of sins spoken of in the following clause, and which is undeniably a spiritual effect, is attributed to the unction by St. James. This is the position which Mr. Puller has taken; but from the arbitrary and violent breaking up of the Jacobean text which it postulates, such a view utterly fails to furnish an adequate rationale for the universal and permanent character of the Apostolic prescription. Mr. Puller vainly seeks an analogy (op. cit., pp. 289 sqq.) in the absolute and universal expressions in which Christ assures us that our prayers will be heard. We admit that our rite of unction and prayers are always, and infallibly efficacious for our ultimate spiritual good, but not by any means necessarily so for the specific temporal objects or even the proximate spiritual ends which we ourselves intend. Christ's promises regarding the efficacy of prayer are fully justified on this ground; but would they be justified if we were compelled to verify them by reference merely to the particular temporal boon we ask for? Yet this is how, on his own hypothesis, Mr. Puller is obliged to justify St. James's assurance that the prayer-unction shall be efficacious. But in the Catholic view, which considers the temporal boon of bodily healing as being only a conditional and subordinate end of the unction, while its paramount spiritual purpose—to confer on the sick and dying graces which they specially need—is only incidentally involved, we have an adequate rationale of the Jacobean injunction provided, but a true instead of a false analogy with the efficacy of prayer is established.

But in defence of his thesis Mr. Puller is further obliged to maintain that all reference to the effects of the unction ceases with the words, "the Lord shall raise him up", and that in the clause immediately following, "and if he be in sins, they shall be forgiven him", St. James passes on to a totally different subject, namely, the Sacrament of Penance. But unless we agree to disregard the rules of grammar and the logical sequence of thought, it is impossible to allow this separation of the clauses and this sudden transition in the third clause to a new and altogether unexpected subject-matter. All three clauses are connected, and if he be in sins, they shall be forgiven him, the prayer of faith and the Lord and if he be in sins, so that the remission of sins is just as clearly stated to be an effect of the unction as the saving and raising up. Had St. James meant to speak of the effect of priestly absolution in the third clause he could not have written in such a way as inevitably to mislead the reader into believing that he was still dealing with an effect of the priestly unction. In the nature of things there is no reason why unction as well as absolution by a priest might not be Divinely ordained for the sacramental emission of sin, and that it was so ordained is what every reader naturally concludes from St. James. Nor is there any reason for supposing that the unction was designed to suggest a reference to the Sacrament of Penance in this third clause. The admonition in the following verse (16), "Confess, therefore, your sins one to another", may refer to a mere liturgical confession like that expressed in the "Confiteor"; but even if we take the reference to be to sacramental confession and admit the genuineness of the connecting "therefore" (its genuineness is itself a point of controversy), we have no justifying reason for connecting this admonition closely with the clause which immediately precedes. The "therefore" may very well be taken as referring vaguely to the whole preceding Epistle and introducing a sort of epilogue.

Mr. Puller's is the latest and most elaborate attempt to evade the plain meaning of the Jacobean text that we have met with; hence our reason for dealing with it so fully. It would be an endless task to notice the many other similarly arbitrary devices of interpretation to which Protestant theologians and commentators have resorted in attempting to justify their denial of the Tridentine teaching so clearly supported by St. James (see examples in Kern, "De Sacramento Extremo Unctionis", Ratisbon, 1587, pp. 60 sqq.). It is enough to notice that in the light of these contradictory interpretations they have offered is a strong confirmation of the Catholic interpretation, which is indeed the only plain and natural one, but which they are bound to reject at the outset. In contrast with their disregard of St. James's injunction and their hopeless disagreement as to what the Apostle really meant, we have the practice of the whole Christian world down to the time of the Reformation in maintaining the use of the Jacobean rite, and the agreement of East and West in holding this rite to be a sacrament in the strict sense, an agreement which became explicit and formal as soon as the definition of a sacrament in the strict sense was formulated, but which was already implicitly and informally contained in the common practice and belief of preceding ages. We proceed, therefore, to study the witness of Tradition.

(C) Proof from Tradition.—(1) State of the Argument.—Owing to the comparative paucity of extant testimonies from the early centuries relating to this sacrament, Catholic theologians habitually recur to the general argument from prescription, which in this case may be stated briefly thus: The uninterrupted use of the Jacobean rite and its recognition as a sacrament in the Eastern Church, which may be considered to have begun its separation since 869, proves that both must have been in possession of a common tradition on the subject prior to the schism. Further, the fact that the Nestorian and Monophysite bishops, who separated from the Church in the fifth century, retained the use of the unction of the sick, carries back the undivided tradition to the beginning of that century, while no evidence from that or any earlier period can be adduced to weaken the legitimate presumption that the tradition is Apostolic, having its origin in St. James's injunction. Both of these broad facts will be established by the evidence to be given below, while the presumption referred to will be confirmed by the witness of the first four centuries.

As to the actual paucity of early testimonies, various explanations are given. It is not sufficient to appeal with Binterim (Die Vorzüglichsten Denkwürdigkeiten der christkathol. Kirche, vol. VI, pt. III, p. 241) to the Discipline of the Secret, which, so far as it existed, applied equally to other sacraments, yet did not prevent frequent reference to them by writers and preachers of those ages. Nor is Launol's contention (Opera, vol. I, pt. I, pp. 544 sqq.) well founded, that recourse to this sacrament was much rarer in earlier ages than later. It is more to the point in the first place to recall the loss, except for a few fragments, of
 several early commentaries on St. James's Epistle (by Clement of Alexandria, Didymus, St. Augustine, St. Cyril of Alexandria, and others) in which chiefly we should look for reference to the union. The earliest accurately preserved commentary is that of St. Bede (d. 735), who, as we shall see, is a witness for this sacrament, as is also Victor of Antioch (fifth century), the earliest commentator on St. Mark. Second, it is clear, at the period when testimonies become abundant, that the union was allied to penance as a supplemental sacrament administered usually, if not always, before the Viaticum. We may presume that this order of administration had come down from remote antiquity, and this close connexion with penance, about which, as privately administered to the sick, the Fathers rarely speak, helps to explain their silence on extreme unction. Third, it should be remembered that there was no systematic sacramental theology before the eighth century, and that the union, as an administered sacrament, was only distinctly defined under the influence of this period—and Catholic theologians have been prone to accommodate their defence to the terms of their adversaries' demand. Hence they have undertaken in many cases to prove much more than they were strictly bound to prove, as for instance that extreme unction was clearly recognized as a sacrament in the strict sense long before the definition of a sacrament in this sense is said to have been given. If precisely the teaching of the Tridvntine doctrine on extreme unction to show that St. James permanently prescribed the rite of unction in terms that imply its strictly sacramental efficacy; that the Church for several centuries simply went on practising the rite and believing in its efficacy as taught by the Apostle, without feeling the need of a more definitely formulated doctrine than is expressed in the text of his Epistle; and that only later, when the Church, in the exercise of her infallible authority, did define for all time the true meaning and proper efficacy of the Jacobean prayer-unction. It is well to keep this principle in mind in discussing the witness of the early ages, though as a matter of fact the evidence, as will be seen, proves more than we are under any obligation to prove.

The Evidence.---(a) Ante-Nicene Period.—The earliest extant witness is Origen (d. 254), who, in enumerating the several ways of obtaining remission of sins, comes (seventhly) to "the hard and laborious" way of (public) penance, which involves the confession of one's sins to the priest and the acceptance at his hands of "the salutary medicine". And having quoted the Psalmist in support of confession, Origen adds: "And in this [in quo] is fulfilled also what St. James the Apostle says: if any one is sick, let him call in the priests of the Church, and let them lay hands on him, anointing him with oil in the name of the Lord, and the prayer of faith shall save the sick man, and if he be in sins they shall be remitted to him" (Hom. ii, in Levit., in P. G., XIII, 419). We might be content to quote this as a proof merely of the fact that the injunction of St. James was well known and observed in Origen's time, and that the rite itself was commonly spoken of at Alexandria as "a laying on of hands". But when it is that the admission of the seventhly of sins, of which the Apostle speaks, not to the rite of unction but to the Sacrament of Penance, it is worth while inquiring into the reasons alleged for this interpretation of the passage. Some would have it that Origen is analogizing, and that he takes the sick man in St. James to mean the spiritually sick or the sinner, thus changing the Apostolic injunction to the following: If anyone be sick, let him call in the hands of the priests of the Church, and let them lay hands on him, anointing him with oil in the name of the Lord, and the prayer of faith shall save the sick man, and if he be in sins they shall be remitted to him. But we cannot suppose the great Alexandrian capable of such illogicalness on his own account, or capable of attributing it to the Apostle. According to Mr. Puller (op. cit., pp. 42 sqq.), Origen, while quoting the whole text of St. James, means in reality to refer only to the fulfilment of the concluding words, "and if he be in sins", etc., but we may quite as reasonably assume that all, which, in Mr. Puller's, and ex hypothesi in Origen's, view, has nothing to do with the subject and can only lead to confusion; and why, above all, omit the words of St. James immediately following, "Confess your sins one to another", which would have been very much to the point and could not have caused any confusion? The truth is that the relation of the Jacobean rite to penance is very obscurely stated by Origen; but, whatever may have been his views of that relation, he evidently means to speak of the whole rite, unction and all, and to assert that it is performed as a means of remitting sin for the sick. If it be held on the obscurity of the connexion that he absolutely identifies the Jacobean rite with penance, the only logical conclusion would be that he considered the unction to be a necessary part of penance for the sick. But it is much more reasonable and more in keeping with what we know of the penitential discipline of the period—Christian sinners were admitted to canonical penance only once—to suppose that Origen looked upon the rite of unction as a supplement to penance, intended for the sick or dying who either had never undergone canonical penance, or after penance might have contracted new sins, demanded healing without the satisfaction being cut short by sickness, might be considered to need just such a complement to absolution, this complement itself being independently efficacious to remit sins or complete their remission by removal of their effects. This would fairly account for the confused grouping together of both ways of remission in the text, and it is a Catholic interpretation in keeping with the conditions of that age and with later and better teaching. It is interesting to observe that John Cassian, writing nearly two centuries later, and probably with this very text of Origen before him, gives similar enumeration of means for obtaining remission of sins, and in this enumeration the Jacobean rite is given an independent place (Collat., XX, in P. L., XLIX, 1161).

With Origen's contemporaries, Tertullian, in upbraiding heretics for neglecting the distinction between clergy and laity and allowing even women "to teach, to dispute, to perform exorcisms, to undertake cures [curationes repromittentre], perhaps even to baptize" (De Prescript., c. xii, in P. L., II, 262), probably refers in the italicized clause to the use of the Jacobean rite; for he did not consider charismatic healing, even with oil, to be the proper or exclusive function of the clergy (see Act. Apost., e. iv, in P. L., I, 768). If this be so, Tertullian is a witness to the general use of the rite and
to the belief that its administration was reserved to the priests.

St. Aphrahat, "the Persian Sage", though he wrote (336-345) after Nicæa, may be counted as an Ante-Nicene witness, since he lived outside the limits of the empire and remained in ignorance of the Arian strife. Writing of the various uses of holy oil, this Father says that it contains the sign "of the sacrament of life by which Christians [in baptism], priests [in ordination], kings [in coronation] may be anointed and made holy and saved from the darkness [in confirmation], anoints the sick, and by its secret sacrament restores penitents" (Demonstratio xxiii, 3, in Graffin, "Prol. Syriaca", vol. i, p. lv.). It is hardly possible to question the allusion here to the Jacobean rite, which was therefore in regular use in the remote Persian Church at the beginning of the fourth century. Its mention side by side with other utilizations ... but the formulator is characteristic of the period, and merely shows that the strict definition of a sacrament had not been formulated. As being virtually Ante-Nicene we may give also the witness of the collection of liturgical prayers known as the "Sacramentary of Scaprio". (Scaprio was Bishop of Thmuis in the Nile Delta and the friend of St. Athanasius.) The seventeenth prayer is a lengthy form for consecrating the oil, in which the consecrator prays that God is pleased to bestow upon the oil a supernatural efficacy "for good grace and remission of sins, for a medicine of life and salvation, for health and soundness of soul, body, spirit, for perfect strengthening". Here we have not only the recognition in plain terms of spiritual effects from the unction but the special mention of grace and the remission of sins. Mr. Puller tries to explain away several of these expressions, but he has no refuge from the force of the words "for good grace and remission of sins" but to hold that they must be a later addition to the original text.

(b) The Great Patriotic Age: Fourth to Seventh Century. — References to extreme unction in this period are much more abundant and prove beyond doubt the universal use of the Jacobean unction in every part of the Church. Some testimonies, moreover, refer specifically to one or more of the several ends and effects of the sacrament, as the cure or alleviation of bodily sickness and the remission of sins, while some may be said to anticipate pretty clearly the definition of extreme unction as a sacrament in the strict sense. As illustrating the universal use of the Jacobean unction, we may cite in the first place St. Ephraem Syrus (d. 373) and St. Basil the Great (Opera, Rome, 1740, vol. ii, p. 541), addressing the sick person to whom the priests minister, says: "They pray over thee; one blows on thee; another seals thee." The "sealing" here undoubtedly means "anointing with the sign of the cross", and the reference to St. James is clear [see Beckell, Carmina Nisibena, Leipzig, 1806, pp. 223, 4, note, and the other passage (seventy-third Carmen) there discussed]. Next we would call attention to the witness of an ancient Ordo compiled, it is believed, in Greek before the middle of the fourth century, but which is preserved only in a fragmentary Latin version made before the end of the fifth century and recently discovered at Verona ("Didascalic Apostolorum" in "Fragmenta Veronensia", ed. Hauer, Leipzig, 1900), and in another hagiographic version. This Ordo, in both versions contains a form for consecrating the oil for the Jacobean rite, the Latin praying for the "strengthening and healing" of those who use it, and the Ethiopic for their "strengthening and sanctification". Mr. Puller, who gives and discusses both versions (op. cit., p. 104 sq.), is once more obliged to postulate a corruption of the Ethiopic version because of the reference to sanctification. But may not the "strengthening" spoken of as distinct from "healing" be spiritual rather than corporal? Likewise the "Testamentum Domini", compiled in Greek about the year 400 or earlier, and preserved in Syriac (published by Rahman), and in Ethiopic and Arabic versions (still in MSS.) contains a form for consecrating the oil of the sick, in which, besides bodily healing, the sanctifying power of the oil as applied to penitents is referred to (see "The Testament of Our Lord", tr. Cooper and Maclean, 1902, pp. 77, 78). From these instances it appears that Scaprio's Sacramentary was not without parallels during this period.

In St. Augustine's "Speculum de Scripturâ" (an. 427; in P. L., XXXIV, 587-1040), which is made up almost entirely of Scriptural texts, without comment by the compiler, and is intended as a handy manual of Christian piety, doctrinal and practical, the injunction of St. James regarding the prayer-unction of the sick is quoted. This shows that the rite was a commonplace of the church of that age; and we are told by Possidius, in his "Life of Augustine" (c. xxvii, in P. L., XXXII, 50), that the saint himself "followed the rule laid down by the Apostle that he should visit only orphans and widows in their tribulation (James, i, 27), and that if he happened to be asked by the sick to pray to the Lord for them and impose hands on them, he did so without delay". We have seen Origen refer to the Jacobean unction in the "Testament of our Lord" and this title survived to a very late period in the Church of St. Ambrose, who was himself an ardent student of Origen and from whom St. Augustine very likely borrowed it (see Magistretti, "Manuale Ambrosianum ex Codice sec. xi", etc., 1905, vol. i, p. 79 sq., 94 sq., 147 sq., where three different Ordines of the sixteenth and thirteenth centuries have as title for the office of extreme unction "impositionis manuum super infirmum"). It is fair, then, to conclude from the biographer's statement that, when called upon to do so, St. Augustine himself used to administer the Jacobean unction to the sick. This would be exactly on the lines laid down by Augustine's contemporary, Pope Innocent I (see below). St. Ambrose himself, writing against the Novatians (De Pecnit, VIII, in P. L., XVI, 477), asks: Why therefore do you lay on hands and believe it to be an effect of the blessing [benedictionis opus] if any of the sick happen to recover? . . . Why do you baptize, if sins cannot be remitted by men?" The coupling of this laying-on of hands with baptism and the use of both as arguments in favour of penance, shows that there is question not of mere charismatc healing by a simple blessing, but of a rite which, like baptism, was in regular use among the Novatians, and was clearly taught and practised by the successors of St. James. St. Athanasius, in his encyclical letter of 341 (P. G., XXV, 234), complaining of the evils to religion caused by the intrusion of the Arian Bishop Gregory, mentions among other abuses that many catechumens were left to die without baptism and that many sick and dying Christians had to choose the hard alternative of being deprived of priestly ministrations — which they considered more terrible calamity than the disease itself—rather than allow "the hands of the Arians to be laid on their heads". Here again we are justified in seeing a reference to extreme unction as an ordinary Christian practice, and a proof of the value which the faithful attached to the rite. Cassiodorus (d. about 570) thus paraphrases the injunction of St. James (Complexiones in Ep. Aquin.), for; "that they considered a more terrible calamity than the disease itself" — rather than allow "the hands of the Arians to be laid on their heads". The practice of extreme unction was considered in the lives of the saints. See, e.g., the lives of St. Leobinus (d. about 550; Aeta SS., 14 March, p. 31), St. Arnd (ibid., 7 Feb., p. 53), St. Eugene (Eougion), Bishop of Ardsrath (modern Ardsrath, in the Diocese of Derry; d. about 618; ibid., 23 Aug., p. 627). One instance
from the life of an Eastern saint, Hypatius (d. about 446), is worthy of particular notice. While still a young monk and before his elevation to the priesthood, he was appointed infirmary in his monastery (in Byzantium), and, though occupying this office he showed a splendid example of charity in his care of the sick, whom he sought out and brought to the monastery. “But if the necessity arose”, says his disciple and biographer, “of anointing the sick person, he reported to the abbot, who was a priest (πατέρα προφήτη), and had theunction with the blessed oil performed by him. And it often happened that in a few days, God, co-operating with his efforts, he sent the man home restored to health” (Acta SS., 17 June, p. 241). It appears from this testimony that the Jacobean unction was administered only to those who were seriously ill, that only a priest could administer it, that consecrated oil was used, that it was distinct from charismatic unction (which the saint himself used to perform, while still a layman, using consecrated oil), and finally that bodily healing did not always follow and was not apparently expected to follow, and that when it did take place it was not regarded as miraculous. It is, therefore, implied that other effects besides bodily healing were believed to be produced by the Jacobean unction, and these must be understood to be spiritual.

As evidence of the use of the unction by the Nestorians we may refer to the nineteenth canon of the synod at Antioch, held in 532, where the Patriarch Joseph, and which, speaking of those who have been addicted to various diabolical and superstitious practices, prescribes that any such person on being converted shall have applied to him, “as to one who is corporally sick, the oil of prayer blessed by the priests” (Chabot, Synodicon Orientale, 1902, p. 363). Here, besides the legitimate use of the Jacobean unction, we have an early instance of an abuse of the Patriarch Joseph, and which prevails in the modern Orthodox (schismatical) church, of permitting the eucheilchion to be administered, on certain days of the year, to people who are in perfect health, as a complement of penance and a preparation for Holy Communion [see below VI, (3)]. That the Monophysites also retained the Jacobean unction after their separation from the Catholic Church (431) is clear from the fact that their liturgies (see, e.g., the Liturgy of St. James, preserved in the modern Syriac church) contain the Jacobean unction. There is reason to suppose that this portion of their liturgies in its present form has been borrowed from, or modelled upon, the Byzantine rite of a later period (see Brightman in “Journal of Theological Studies”, I, p. 261), but this borrowing supposes that they already possessed the unction itself. It has nowadays fallen into disuse among the Nestorians and Armenians, though not among the Copts.

Many testimonies might be quoted in which the Jacobean unction is recommended specifically as a means of restoring bodily health, and the faithful are urged to receive it instead of recurring, as they were prone to do, to various superstitious remedies. This is the burden of certain passages in Procopius of Gaza (c. 465-5-25; “In Levit.”, xix, 31, in P. G., LXXXVII (1), 702; see also Bickell, P. I., pp. 178 sq.), St. Cyril of Alexandria (De Adorat. in Spiritu et Veritate, VI, in P. G., I, XVIII, 470 sq.), St. Caesarius of Arles (Serm. cxxii, 5, “Append ad sermon. Augustini” in P. L., XXXIX, 2741), and John Mandakuni (Montagoumi), Catholicos of the Armenians from 480 to 487 (Schmid, Reden des Jeannes Mandakuni, pp. 222 sq.). This particular effect of the prayer of Antioch has been so specially emphasized and used as a form used to this day in the Orthodox Eastern Church (see above, I).

Mention of the remission of sins as an effect of the Jacobean unction is also fairly frequent. It is coupled with bodily healing by St. Caesarius in the passage just referred to: the sick person will “receive both health of body and remission of sins, for the Holy Ghost has given this promise through James”. We have mentioned the witness of John Cassian, and the witness of his master, St. Chrysostom, may be given here. Cassian says, “On the unction” (in P. G., CLXVIII, 641) St. Chrysostom proves the dignity of the priesthood by showing, among other arguments, that the priests by their spiritual ministry do more for us than our own parents can do. Whereas our parents only beget our bodies, which they cannot save from death and disease, the priests regenerate our souls in baptism and have power, moreover, to remit post-baptismal sins; a position which St. Chrysostom proves by quoting the text of St. James. This passage, like that of Origen discussed above, has given rise to no little controversy, and it is claimed by Mr. Puller (op. cit., pp. 45 sqq.) as a proof that St. Chrysostom, like Origen, understood St. James as he (Mr. Puller) does. But if this were so it would still be true that only clinical penance is referred to, for it is only the sick that St. James can be understood to speak of; and the main point of Mr. Puller’s argument, viz., that it is inconceivable that St. Chrysostom should pass over the Sacrament of Penance in such a context, would have lost hardly any of its force. We know very little, except by way of inference and assumption, about the practice of clinical penance in that age; but we are well acquainted with canonical penance as administered to those in good health, and it is to this obviously we should expect to refer the reference in St. James. We may well speak of that sacrament at all. Mr. Puller is probably aware how very difficult it would be to prove that St. Chrysostom anywhere in his voluminous writings teaches clearly and indisputably the necessity of confessing to a priest: in other words, that he recognizes the Sacrament of Penance as Mr. Puller recognizes it; and in view of this general obscurity on a point of fundamental importance it is not at all so strange that penance should be passed over here. We do not pretend to be able to enter into St. Chrysostom’s mind, but assuming that he recognized both penance and unction to be efficacious for the remission of post-baptismal sins—and the text before us plainly states this in regard to the unction—we may perhaps find in the greater affinity of unction with baptism, and in the particular points of contrast, the reason why he should pass over penance in that context. Regeneration by water in baptism is opposed to parental generation, and saving by oil from spiritual disease and eternal death to the inability of parents to save their children from bodily disease and death. St. Chrysostom might have added several other points of contrast, but he confines himself in this context to these two; and supposing, as one ought in all candour to suppose, that he understood the text of St. James as we do, in its obvious and natural sense, it is evident that the prayer-unction, so much more akin to baptism in the simplicity of its ritual character and so naturally suggested by the mention of sickness and death, supplied a much apter illustration of the priestly power of remitting post-baptismal sins than the judicial process of penance. And a single illustration that this context might convey.

Victor of Antioch (fifth century) is one of the ancient witnesses who, in the general terms they employ in speaking of the Jacobean unction, anticipate more or less clearly the definition of a sacrament in the strict sense. Commenting on St. Mark, vi, 13, Victor quotes the text of St. James and adds: “Oil both cures pains and is a source of light and refreshment. This then they employed to anoint the sick. The oil, so specially the oil of God, and the cure of the disease, and the enlightening of the heart. For it is manifest to all that the prayer effected all this; but the oil, as I think, was the symbol of these things” (Cramer, Caten. Graec. Patrum, I, p. 324). Here we have the distinction, so well known in later theology, between the significatio.
and causality of a sacrament; only Victor attributes the significance entirely to the matter and the causality to the form (the prayer). This was to be corrected in the fully developed sacramental theory of later times, but the attribution of sacramental effects to the form (the prayer, the word, etc.) is characteristic of patristic suggestions of a theory. Victor clearly attributes both spiritual and corporal effects to the prayer-unction; nor can the fact that he uses the imperfect tense (vidego, etc.) be held against him, in what has been to imply that the use of the unction had ceased at Antioch in his day. The use of the present tense in describing the signification of the rite implies the contrary, and independent evidence is clearly against the supposition. In the passage from John Mandakuni, referred to above, the prayer-unction is repeatedly described as "the gift of grace," "the grace of God," Divinely instituted and prescribed, all which cannot be neglected and despised without incurring "the curse of the Apostles"; language which it is difficult to understand unless we suppose the Armenian patriarch to have reckoned the unction among the most sacred of Christian rites, or, in other words, regarded it as being what we describe as a sacrament in the strict sense (cf. Kern, op. cit., pp. 46, 47).

There remains to be noticed under the head the negligence in the application of the doctrine. Of importance on extreme unction, the well-known passage in the Letter of Pope Innocent I (402-417), written in 416, to Decentius, Bishop of Eugubium, in reply to certain questions submitted by the latter for solution. In answer to the question as to who were entitled to the unction, the pope, having quoted the text of St. James, says: "There is no doubt that this text must be received or understood of the sick faithful who may be [lawfully] anointed with the holy oil of chrism; which, having been blessed by the bishop, it is permitted not only to priests but to all Christians to use for anointing in their own need or that of their families." Then he diverges to point out the superfluous character of a further doubt expressed by Decentius: "We notice the superfluous addition of a doubt whether a bishop may do what is undoubtedly permitted to priests. For priests are expressly mentioned [by St. James] for the reason that bishops, hindered by other occupations, cannot go to all the sick. But if the bishop is able to do so or thinks anyone specially worthy of being visited, he, whose office it is to consecrate the chrism, need not hesitate to bless and anoint the sick person." Then, reverting to the original question, he explains the qualification he had added in speaking of "the sick faithful," to the fact that the sick faithful, like the priests, may be anointed with oil of chrism, but that this, if not lawfully done, would be sacrilege, and would, therefore, be excluded from the benefits conferred by the Grail Rite. He explains also that since the unction was instituted by the Apostles, no one could question its efficacy. The pope speaks of the eucharist and of the sacrament of extreme unction as sacraments in which the power to consecrate is assumed, that the bishop or priest should be thus authorized to confer these graces on the sick. In this passage the pope speaks of the sick as "sacrament," as those who are illumined with the spirit of holiness; and he concludes by saying: "We have kept the custom of the Church as it was in apostolic times," which custom he thinks should be maintained. The pope adds: "But we must not lose sight of the fact that the sick are not only anointed with oil of chrism, but also are administered holy communion."

(c) The Seventh Century and Later.—One of the most important witnesses for this period is St. Bede (d. 735), who, in his commentary on the Epistle of St. James, tells us (P. L., XCIII, 30) that, as in Apostolic times, so "now the custom of the Church is that the sick should be anointed by the priests with consecrated oil and through the accompanying prayer restored to health." He adds that, according to Pope Innocent, even the laity may use the oil provided it be consecrated on the altar; and he states on the clause, "if he be in sins they shall be remitted to him," after quoting I Cor., xi, 30, to prove that "many because of sins committed in the soul are stricken with bodily sickness or death," he goes on to speak of the necessity of confession: "If, therefore, the sick be in sins and shall have confessed to the priests of the Church and shall have sincerely undertaken to redress the wrong, as the unction has been represented to them. For sins cannot be remitted without the confession of amendment. Hence the injunction is rightly added [by St. James], 'Confess, therefore, your sins one to another.'" St. Bede thus appears to connect the remission of sins in St. James's text with penance rather than with the unction, and is therefore claimed by Mr. Puller as supporting his own interpretation of the text. But it should be observed that in asserting the necessity of confessing post-
baptismal sins, a necessity recognized in Catholic teaching. Bede does not deny that the unction also be efficacious in remitting them, or at least in completing their remission, or in remitting the lighter daily sins which need not be confessed. The bodily sickness which the unction is intended to heal is regarded by St. Bede as being, often at any rate, the effect of sin; and it is interesting to notice that Amalarius of Metz, writing a century later (De Eccles. Offic., I, xii, in P. L., CV, 1011 sq.), with this passage of Bede before him, explains the efficacy of the Christ unction of sickness due to the unworthy reception of the Eucharist, but the remission of daily sins: "What saves the sick is manifestly the prayer of faith, of which the sign is the unction of oil. If those whom the unction of oil, i.e. the grace of God through the prayer of the priest, assists are sick for the reason that they eat the Body of the Lord unworthily, it is right that the Church, by the unction of which there is question should be associated with the sanctification of the Body and Blood of the Lord, which takes place in commemoration of the Passion of Christ, by Whom the author of sin has been eternally vanquished. The Passion of Christ destroyed the author of death; His grace, which is signified by the unction of oil, has destroyed his arms, which are daily sins."

The confusing way in which St. Bede introduces repetition into the text of St. James is intelligible enough when we remember that the unction was regarded and administered as a complement of the Sacrament of Penance, and that no formal question had yet been raised about their respective independent effects. In the circumstances of the age it was more important to insist on the necessity of confession than to discuss with critical minuteness the effects of the unction, and one had to be careful not to allow the text of St. James to be misunderstood as if "the unction with this necessity for the sick sinner." The passage in St. Bede merely proves that he was preoccupied with some such idea in approaching the text of St. James. Paschalisius Radbertus (writing about 831) says from the same standpoint that "according to the Apostle when anyone is sick, recourse is to be had in the first place to confession of sins, then to the prayer of many, then to the sanctification of the unction for the sanctification of sickness" (De Corp. et Sang. Domini, c. viii, in P. L., CXX, 1292); and the same writer, in what he tells us of the death of his abbot, St. Adelward of Corbie, testifies to the prevalence of an opinion that it was only those in sins who had need of the unction. The assembled monks, who regarded the holy abbot as "free from the burdens of sins", doubted whether they should procure the Apostle unction for him. But the saint, overhearing the debate, declared that it should be given at once, and with his dying breath exclaimed: "Now dismiss thy servant in peace, because I have received all the sacraments of Thy mystery" (P. L., CXX, 1547).

As proving the uninterrupted universality during this period of the practice of the Jacobean rite, with a clear indication in some instances of its strictly sacra-
mental character, we find the following condensation from writers, synods, and the precepts of particular bishops. As doubts may be raised regarding the age of any particular expression in the early medieval liturgies, we shall omit all reference to them. There is all the less need to be exhaustive as the adversaries of Catholic teaching are compelled to admit that from the eighth century onwards the strictly sacramental element in the Jacobean rite remains entirely present in the writings and legislation of both the Eastern and the Western Churches. Haymo, Bishop of Halberstadt (841–853), in his Homily on Luke, ii, 6 (P. L., CXVIII, 573), and Amulo, Bishop of Lyons (about 841), in his letter to Theobald (P. L., CXVI, 82), speak of the unction of the sick as an Apostolic practice. Prudentius, Bishop of Treves (about 843–861), tells how the holy virgin Maura asked to receive from his own hands "the sacraments of the Eucharist and of Extreme Unction" (P. L., CXV, 1374; cf. Acta SS., 21 Sept., p. 272); and Jonas, Bishop of Orleans, in his "Institutio Laicalis" (about 829), after reprobating the popular practice of recuring in sickness to magical remedies, says: "It is obligatory on anyone who is sick to demand, not from wizards and witches, but from the Church and her priests, the unction of sanctified oil, a remedy which [as coming] from Our Lord and his holy Church, should be applied to the sick soul" (III, iv, in P. L., CVI, 122 sq.). Already the Second Council of Chalon-sur-Saône (813), in its forty-eighth canon, had prescribed as obligatory the unction enjoined by St. James, "since a medicine of this kind which heals the sicknesses of soul and of body is not to be lightly esteemed" (Hardouin, IV, 1040). The Council of Aachen in 836 warns the priest not to neglect giving penance and unction to the sick person since his illness becomes serious, and when the end is seen to be imminent the soul is to be commended to God “more sacerdotali cum acceptione sacrae communions” (cap. ii, can. v, ibid., 1397). The First Council of Mainz (847), held under the presidency of Rhabanus Maurus (cap. xxvi), prescribed in the same order the administration of penance, unction, and the Viaticum (Hardouin, V, 13); while the Council of Paris (855), demanded that the laying on of the hands of the sick, application of the Viaticum, and the unction of the capitulary (viii), according to the traditional interpretation of Pope Innocent’s letter to Decentius (see above), directs preachers to be sedulous in instructing the faithful regarding “that salutary sacrament which James the Apostle commends . a truly great and very much to be desired mystery, by which, if asked for with faith, both sins are remedied and they are consequences practically healed." (ibid., III, 27; Denzinger, Enchiridion, Freiburg, 1908, no. 315).

The statutes attributed to St. Sonnatus, Archbishop of Reims (about 600–631), and which are certainly anterior to the ninth century, direct (no. 15) that “extreme unction is to be brought to the sick person who asks for it”, and “that the pastor himself is to visit him often, animating and duly preparing him for future glory” (P. L., LXXX, 415; cf. Hefele, Conciliengesch., III, 47). The fourth canon of the canons promulgated (about 745) by St. Boniface, the Apostle of Germany (see Hefele, III, 580 sq.), forbids priests to go on a journey “without the chism, and the blessed oil, and the Eucharist”, so that in any emergency they may be ready to offer their ministrations; and the twenty-ninth orders all priests to have the oil of the sick always with them and to warn the sick faithful to apply for the unction (P. L., LXXXIX, 521 sq). In the “Exceptiones” of Egbert, Archbishop of York (752–766), the unction is mentioned between penance and the Eucharist, and ordered to be diligently administered (P. L., LXXXIX, 382). But no writer of this period treats of the unction so fully as, and none more undeniably regards it as a true sacrament in the strict sense than, Theodulf, Bishop of Orleans, and with him we will conclude our list of witnesses. A long section of the book would be needed to give an adequate view of the subject (P. L., CV, 220 sq.). “Priests are also to be admonished regarding the unction of the sick, and penance, and the Viaticum, lest anyone should die without the Viaticum.” Penance is to be given first, and then, “if the sickness allow it,” the patient is to be carried to the church, where the unction and Holy Communion are to be given. Theodulf describes the unctio in detail, ordaining that, or three times five crosses to be made with the oil to symbolize the Trinity and the five senses, but noting at the same time that the practice varies as to the number of anointings and the parts anointed. He quotes with approval the form used by the Greeks while anointing, in which remission of sins is expressly mentioned; and so clearly is the unction in his view intended as a preparation for
death that he directs the sick person after receiving it to commend his soul into the hands of God and bid farewell to the living. He enjoys this un tainted privilege of anointing children also on the ground that it sometimes cures them, and that penance is (often) necessary for them. Theodulf's teaching is so clear and definite that some Protestant controversialists recognize him as the originator in the West of the teaching which, as they claim, transformed the Jacobean rite into a sacrament. But from all that precedes it is abundantly clear that no such idea is to be found. Some previous writers, as we have seen, had explicitly taught and many had implied the substance of Theodulf's doctrine, to which a still more definite expression was later to be given. The Scholastic and Tridentine doctrine is the only goal to which patristic and medieval teaching could logically have led.

IV. MATTER AND FORM. (For the technical meaning of these terms in sacramental theology see SACRAMENTS.)—(1) The remote matter of extreme unction is consecrated oil. No one has ever doubted that the oil meant by St. James is the oil of olives, and in the Western Church pure olive oil without mixture of any other substance seems to have been almost always used. But in the Eastern Church the custom was introduced pretty early of adding in some places a little water, and in others the Essential Substance of the holy oil. In memory of the good Samaritan, and, among the Nestorians, a little ashes or dust from the sepulchre of some saint. But that the oil must be blessed or consecrated before use is the unanimous testimony of all the ages. Some theologians, however, have held consecration to be necessary merely as a matter of precept, not essential for the validity of the sacrament, e. g. Victoria (Lib. infra, p. 765); J. Jucquin (Comm. hist. et dogm. de Sacram., D. vii, q. iii, c. 1), de Sainte-Beuve (De Extr. Uncet., D. iii, a. 1). Drouven (De Re Sacramentariâ, Lib. VII, q. ii, c. 1, 2); indeed Berti, while holding the opposite himself, admitted the wide prevalence of this view among the recent theologians of his day. But considering the unanimity of tradition in insisting on the oil being blessed, and the teaching of the Council of Trent (Sess. XIV) that “the Church has understood the matter [of this sacrament] to be oil blessed by the bishop”, it is not surprising that by a decree of the Holy Office, issued 13 Jan., 1611, the proposition asserting the validity of extreme unction with the use of oil not consecrated by the bishop should have been condemned. To express more graphically (Deetzinger, no. 1628—old no. 1494), and that, to the question whether a priest could in case of necessity validly use for this sacrament oil blessed by himself, the same Holy Office, reaffirming the previous decree, should have replied in the negative (14 Sept., 1812; ibid., no. 1629—old no. 1495). These decisions only settle the dogmatic question provisionally and, so far as they afford the necessity of episcopal consecration of the oil, are applicable only to the Western Church. As is well known, it is the officiating priest or priests who ordinarily bless the oil in the Eastern Orthodox Church, and there is no lack of evidence to prove the antiquity of this practice (see Benedict XIV, De Synod. Dioc., VIII, 1, 1). For Italo-Greeks in communion with the Holy See the practice was sanctioned by Eugenius III. (cited by Billot, De Sacramentis, no. 210) in 1144; and it has likewise been sanctioned for various bodies of Eastern Uniates down to our own day (see “Collect. Laecensis”, II, pp. 35, 150, 582, 479 sq.; cf. Letter of Leo XIII, “De Discipl. Orient. conservandâ” in “Acta S. Sedis”, XXVII, pp. 257 sq.). There is no doubt, therefore, that priests can be delegated to bless the oil validly, though there is no sufficient record of such delegation being given in the Western Church. But it is only the supreme authority in the Church that can grant delegation, or at least it may reserve to itself the power of granting it (in case one should wish to maintain that in the absence of reservation the ordinary bishop had to give this power). The Eastern Uniates have the express (though an innovation of the Holy See for their discipline, and, as regards the schismatical Orthodox, one may say either that they have the tacit approbation of the pope or that the reservation of episcopal power does not extend to them. In spite of the schism the pope has never wished or intended to abrogate the ancient privileges of the Orthodox in matters of this kind. The precise teaching of the different branches known to us differ very widely, but all of them contain some reference to the purpose of anointing the sick. Hence, at least in the case of a bishop, whose power is ordinary and not delegated, no special form would seem to be necessary for validity, provided this purpose is expressed. But where it is not at all expressed or intended, as in the forms at present used for blessing the chalice and the oil of catechumens, it appears doubtful whether either of these oils would be valid matter for extreme unction (cf. Kern, op. cit., p. 131). But in the nature of things there does not seem to be any reason why a composite form of blessing might not suffice to make the same oil valid matter for more than one sacrament.

(2) The proximate matter of extreme unction is the unction with consecrated oil. The parts anointed according to present usage in the Western and Eastern Churches have been mentioned above (1), but it is to be observed that even to-day there are differences of practice in various branches of the Orthodox Church (see Echos d'Orient, 1889, p. 194). The question is whether several unctions are necessary for a valid sacrament, and if so, which are the essential ones. Arguing from the practice of ancient times which they were acquainted with and which they assumed to have existed always, the Scholastics not unnaturally concluded that the unctions of the five organs of sense were essential. This was the teaching of St. Thomas (Suppl., Q. xxxii, a. 6), who has been followed pretty unanimously by the School and by many later theologians down to our own day (e. g. Billot, De Sacramentis, II, p. 231) who set the method and tradition of the School above positive and historical theology. But a wider knowledge of past and present facts has made it increasingly difficult to defend this view, and the best theologians of recent times have denied that the unction of the five senses, any more than that of the feet or loins, is essential for the validity of the sacrament. The facts, broadly speaking, are these: that no ancient tradition anywhere known to us prescribed them as necessary, but most of them speak simply of unction in a way that suggests the sufficiency of a single unction; that the unction of the five senses has never been extensively practised in the East, and is not practised at the present time in the Orthodox Church, while those Uniates who practise it have simply borrowed it in modern times from Rome; and that even in the Eastern Church down to the sixteenth century the practice was not very widespread, and did not become universal till the seventeenth century, as is proved by a number of sixteenth-century Rituals that have been preserved (for details and sources see Kern, op. cit., p. 133 sq.). In face of these facts it is impossible any longer to defend the Scholastic view except by maintaining that the Church has frequently agreed that the unction of the five organs of sense is necessary, and not only has she allowed it to be invalidly administered during the greater part of her history, as she still allows without protest in the East. The only conclusion, therefore, is that as far as the matter is concerned nothing more is required for a valid sacrament than a true unction with duly consecrated oil, and this conclusion may henceforth be regarded as certain by reason of the recent decree of the Holy Office already referred to (1), which, though it speaks only of the form, evidently supposes that form to be used with a single
unction. Besides the authority of the Scholastic tradition, which was based on ignorance of the facts, the other principal basis on which the objection is to be found is in the instruction of Eugene IV to the Armenians [see above, III (A)]. But in reply to this argument it is enough to remark that this decree is not a dogmatic definition but a disciplinary instruction, and that, if it were a definition, those who appeal to it ought in consistency to hold the union of the facts and loins to be essential. It is hardly necessary to insist on the necessity of the proximate conditions prescribed in the Roman Ritual for the validity of the sacrament, there is no intention of denying the grave obligation of adhering strictly to the prescription of the Ritual, or, for cases of urgent necessity, to the decree of the First Council of Vienne.

V. MINISTER.—(1) The Council of Trent has defined in accordance with the words of St. James that the proper ministers (proprios ministros) of this sacrament are the priests of the Church alone, that is bishops or priests ordained by them (Sess. XIV, cap. iii, and can. iv, De Extr. Uinct.). And this has been the constant teaching of tradition, as is shown by the Holy Office in the decree quoted above. B. L. O. L. (Opp. I, 560 sq.) has maintained that deacons can be validly delegated by the bishop to administer extreme unction, appealing in support of his view to certain cases in which they were authorized in the absence of a priest to reconcile dying penitents and give them the Viaticum. But in none of these cases is extreme unction once mentioned or referred to, and one may not gratuitously assume that the permission given extended to this sacrament, all the more so as there is not a particle of evidence from any other source to support the assumption. The Carmelite Thomas Waldensis (d. 1430) inferred from the passage of Innocent I [see above, under III (C), (2), (b)] that, in case of necessity when no priest could be got, a layman or woman might validly anoint (Doc- trinae et Doctrinum; Boudinhon, Revue Cath. des Eglises, July, 1905, p. 401 sq.) has defended the same view and improved upon it by allowing the sick person to administer the sacrament to himself or herself. This opinion, however, seems to be clearly excluded by the definition of the Council of Trent that the priest alone is the "proper" minister of extreme unction. The word proper cannot be taken as equivalent merely to ordinary, and can only mean "Divinely authorized." And as to the unction of themselves or others by lay persons with the consecrated oil, it is clear that Pope Innocent, while sanctifying the pious practice, could not have supposed it to be efficacious in the same way as the unction by a priest or bishop, to whom alone in his view the administration of the Jacobean rite belonged. This lay unction was merely what we call to-day a sacramental. Clericus (Decisions de Extr. Uinct., decis. lxxv) has held that a sick priest in case of necessity can validly administer extreme unction to himself; but he has no argument of any weight to offer for this opinion, which is opposed to all sacramental analogy (outside the case of the Eucharist) and to a decision of the Congregation of Propaganda issued 23 April, 1844. These objections have been met by an appeal from many theologians to the Constitution of the Church, and they alone, can validly confer extreme unction.

(2) The use of the plural in St. James—"the priests of the Church"—does not imply that several priests are required for the valid administration of the sacrament. The plural is used to express the possibility of several priests being present among communities in each of which there was a number of priests, and where several, if it seemed well, could easily be summoned, it was natural for the Apostle to use the plural without intending to lay down as a matter of necessity that several should actually be called in. The expression used is merely a popular and familiar way of saying, "let the sick man call for writing," as we may say, "let the doctor call in the doctors," meaning, "let him procure medical aid." The plural in either case suggests at the very most the desirability, if the circumstances permit, of calling in more than one priest or doctor, but does not exclude, as is obvious, the services of only one, if only one is available, or if for a variety of possible reasons it is better that only one should be summoned. As is evident from several of the witnesses quoted above (III), not only in the West but in the East the unction was often administered in the early
centuries by a single priest; this has been indeed at all times the almost universal practice in the West (for exceptions cf. Martène, op. cit., I, vii, 3; Kern, op. cit., p. 260). In the East, however, it has been more generally the custom for several priests to take part in the administration of the sacrament. Although the number seven, chosen for mystical reasons, was the ordinary number in many parts of the East from an earlier period, it does not seem to have been prescribed by law for the Orthodox Church before the thirteenth century (cf. Kern, op. cit., p. 260). But even those Oriental theologians who with Symeon of Thessalonica (1099-1144) determined that the imposition of hands on the sick person by a single priest, do not insist on more than three as necessary, while most Easterns admit that one is enough in case of necessity (cf. Kern, op. cit., p. 261).

The Catholic position is that either one or several priests may validly administer extreme unction; but when several officiate it is forbidden by Benedict XIV for the Italo-Greeks (Const. "Etsi Pastoralis", 1742) for one priest merely to anoint and another merely to pronounce the form, and most theologians deny the validity of the unction conferred in this way. The actual practice, however, of the schismatical churches is for each priest in turn to repeat the whole rite, both matter and form, with variations only in the non-essential prayers. This gives rise to an interesting question, viz., whether extreme unction as administered with the repetition of the unction (below, IX).

VI. SUBJECT.—(1) Extreme unction may be validly administered only to Christians who have had the use of reason and who are in danger of death from sickness. That the subject must be baptized is obvious, since all the sacraments, besides baptism itself, are subject to this condition. This is implied in the text of St. James: "Is any man sick among you?" i.e. any member of the Christian community; and tradition is so clear on the subject that it is unnecessary to delay in giving proof. It is not so easy to explain on internal grounds why extreme unction must be denied to baptized infants who are sick or dying, while confirmation, for instance, may be validly administered to them; but such is undoubtedly the traditional teaching and practice. Except to those who were capable of penance extreme unction has never been given. If we assume, however, that the principal effect of extreme unction is to give, with sanctifying grace or its increase, the right to certain actual graces for strengthening and comforting and alleviating the sick person in the last extremity of life, we may be able to explain why such a state of dangerous illness, and that the other effects are dependent on the principal, it will be seen that for those who have not attained, and will not attain, the use of reason till the sickness has ended in death or recovery, the right in question would be meaningless, whereas the similar right bestowed with the character in confirmation may, and normally does, realize its object in later life. It is to be observed in regard to children, that no age can be specified at which they cease to be incapable of receiving extreme unction. If they have attained sufficient use of reason to be capable of sinning even venially, they may certainly be admitted to this sacrament, even though considered too young according to modern practice to receive their first communion. The right of giving extreme unction should be administered conditionally. Those who have always been insane or idiotic are to be treated in the same way as children; but anyone who has ever had the use of reason, though temporarily delirious by reason of the disease or even incurably insane, is to be given the benefit of the sacrament in case of serious illness.

(2) Grave or serious bodily illness is required for the valid reception of extreme unction. This is implied in the text of St. James and in Catholic tradition (see above, III), and is formally stated in the decree of Eugene IV for the Armenians: "This sacrament is not to be given except to the sick person, of whose death fears are entertained" (Denzinger, no. 700—old no. 595), and in the teaching of the Council of Trent that this unction is to be administered to the sick, but especially to those who seem to be at the point of death [in exitu vita] (Sess. XIV, cap. iii, De Extr. Unct.). It is clear from these words of Trent that extreme unction is not for the dying alone, but for all the faithful who are seriously ill with any such sickness as involves danger of death (discrimen vitæ, ibid.), i.e. as may probably terminate fatally. How grave must be the illness or how proximate the danger of death is not defined by the Council of Trent, though the danger is indicated by the speculations of theologians and the practical judgment of priests directly charged with the duty of administering the sacrament. And there have been, and perhaps still are, differences of opinion and of practice in this matter.

(3) Down to the twelfth century in the Western Church the practice was to give the unction freely to all (except public penitents) who were suffering from any serious illness, without waiting to decide whether danger of death was imminent. This is clear from many testimonies quoted above (III). But during the twelfth and thirteenth centuries a change of practice took place, and the sacrament came to be regarded by many as intended only for the dying. The causes of this change are undoubtedly to be found in the demands of the clergy on the occasion of administering the unction which prevented the poor or even those of moderate means from asking for it except as a last resource; (b) the influence of certain popular superstitions, as, for instance, that the person anointed could not, in case of recovery, use the rights of marriage, eat flesh meat, make a will, walk with lasse feet, etc.; and (c) the teaching of the Scotist School and of other theologians that, as the principal effect of the sacrament was the final remission of venial sins, it should not be given except to those who could not recover, and were no longer able or at least likely to fall again into venial sin (St. Bonaventure, "Breviloquium", P. VI, c. xi, Scotus, "Report. Parisiensem"). It was doubtless under the influence of this teaching that one or two provincial synods of the sixteenth century described the subject of extreme unction as "the dangerously sick and almost dying" (Hardouin, X, 1548, 1553); and the neglect of the sacrament induced by these several causes resulted, during the disturbances of the sixteenth century, in the cooperation of the clergy of Germany and especially of Bavaria (Knoopfer, "Die Kelchbewegung in Bayern unter Herzog Albrecht V.", pp. 61 sq.; and on this whole matter see Kern, op. cit., pp. 282 sq.). In view of these facts, the oft-repeated accusation of the Eastern schismatics, that the Latins gave the sacrament only to the dying and withheld it from the seriously ill who were capable of receiving it, is not without foundation (Kern, op. cit., p. 274); but they were wrong in assuming that the Western Church as a whole or the Holy See is responsible for abuses of this kind. Church authority earnestly tried to correct the abuse of the clergy and the superstitions of the people, while the Scotist teaching, regarding the chief effect of the unction, was never generally admitted in the schools, and the teaching of Scotus was carefully expounded by the Council of Trent. The Church was compelled to modify the practical conclusion which St. Bonaventure and Scotus had logically drawn from it. There still linger in the popular mind traces of the erroneous opinion that extreme unction is to be postponed till a sickness otherwise serious has taken a critical turn for the worse, and the danger of death become imminent; and priests do not always combat such ideas as they are grounded in the fact that perhaps in many cases the Divinely ordained effect of corporal healing is rendered impossible except by a miracle. The best and most recent theological teaching is in favour of a lenient, rather than of
a severe, view of the gravity of the sickness, or the proximity of the danger of death, required to qualify for the valid reception of extreme unction; and this is clearly compatible with the teaching of the Council of Trent and is supported by the traditional practice of the first twelve centuries. But if the Easterns have had some justification for their charge against the Westerns of unduly restricting the administration of this sacrament, the Orthodox Church is officially responsible for a widespread abuse of the opposite kind which allows the eucharist to be given to persons in perfect health as a complement of penance and a preparation for Holy Communion. Many Western theologians, following Gaur (Euchologia, pp. 349 sq.), have denied that this rite was understood and intended to be sacramental, though the matter and form were employed precisely as in the case of the sick; but, whatever may have been the intention in the past, it is quite certain at the present time that at least in the Constantinopolitan and Hellenic branches of the Orthodox Church the intention is to give the sacrament itself and no mere sacramental to those in sound health who are anointed (Kern, op. cit., 281). On the other hand, in the Russian Church, even outside the ancient tradition concerning anointing as in Moscow and Novgorod on Maundy Thursday each year, this practice is reprobated, and priests are expressly forbidden in Church to give the eucharist to people who are not sick (Kern, pp. 279 sq.; Fortesque, The Orthodox Eastern Church, London, 1907, p. 425). We have already noticed (III) among Nestorians what other cause has been sickness, and it is not improbable that the Orthodox Church till long after the schism there is no evidence of its existence and, the teaching of Eastern theologians down to modern times, to which the Russians still adhere, has been at one with the Western tradition in insisting that the subject of this sacrament must be labouring under a serious sickness.

(4) Nor will danger, or even certainty of death from any other cause, be a sickness which qualifies a person for extreme unction. Hence criminals or martyrs about to suffer death and others similarly circumstanced may not be validly anointed unless they should happen to be seriously ill. But illness caused by violence, as by a dangerous or fatal wound, is sufficient; and old age itself without any specific disease is held by all Western theologians to qualify a person for the extreme unction and in such cases is to be deemed a not infrequent rule of pastoral theology. If in the opinion of doctors the sickness will certainly be cured, and all probable danger of death removed by a surgical operation, theologians are not agreed whether the person who consents to undergo the operation ceases thereby to be a valid subject for the sacrament: Kern holds that he does (op. cit., p. 299), but his argument is by no means convincing. The degree of Eugene IV for the Armenians describes the effects of extreme unction briefly as "the healing of the mind and, so far as it is expedient, of the body also" (Denzinger, no. 700—

VH. 299), but this is by no means convincing. In the corresponding chapter explains as follows the effects of the unction: "This effect is the grace of the Holy Ghost, whose unction blots out sins, if any remain to be expiated, and the consequences [reliquias] of sin, and alleviates and strengthens the soul of the sick person, by exciting in him a great confidence in the Divine mercy, sustained by which confidence he bears more lightly the troubles and sufferings of disease, and more easily resists the temptations of the demon lying in wait for his heel, and sometimes, when it is expiedent for his soul's salvation, recovers bodily health." The remission of sins, as we have seen, is explicitly mentioned by St. James, and the other spiritual effects specified by the Council of Trent are implicitly contained, side by side with bodily healing, in what the Apostle describes as the saving and raising up of the sick man (see above, ID).

(1) It is therefore a doctrine of Catholic faith that sins are remitted by extreme unction, and, since neither St. James nor Catholic tradition nor the Council of Trent limits this effect to venial sins, it is quite certain that it applies to mortal sins also. But according to Catholic teaching there is per se a grave obligation imposed by Divine law of confessing all mortal sins committed after baptism and obtaining absolution from them; from which it follows that one guilty of mortal sin is bound per se to receive the Sacrament of Penance before receiving extreme unction. Whether he is further bound, in case penance cannot be received, to prepare himself for extreme unction by an act of perfect contrition is not so clear; but the affirmative opinion is more commonly held by the theologians, on the ground that the sacrament is a condition of the sacrament of the living, i.e. intended for those in the state of grace, and that every effort should be made by the subject to possess this primary disposition. That the remission at least of mortal sins is not the primary end of extreme unction is evident from the conditional way in which St. James speaks of this effect; and if, for any reason the subject in mortal sin is excused from the obligation of confessing or of eliciting an act of perfect contrition, extreme unction will remit his sin and confer sanctifying grace, provided he has actual, or at least habitual, attrition, or provided (say on recovering the use of reason) he elicits an act of attrition so that the sacrament may take effect by way of dispensation. In other words, extreme unction in this connexion is meant an act of sorrow or detention for sins committed, elicited since their commission and not retracted in the interval before the sacrament is received. The ordinary example occurs when the act of attrition has been elicited before the sick person lapses into unconsciousness or loses the use of reason. That such attraction is necessary, follows from the teaching of Trent (Sess. XX, cap. i, De Penit.) regarding the absolute and universal necessity of repentance for the remission, even in baptism, of personal mortal sins. Schell has maintained (Kathol. Dogmatik, III, pp. 629 sq.) that such attraction is not required for the validity of extreme unction, but that the general purpose and intention, which a Christian sinner may retain even when he is sinning, of after form of repentance, his desire of the grace of God, is sufficient; but this view seems irreconcilable with the teaching of Trent, and has the whole weight of theological tradition against it.

Extreme unction likewise remits venial sins provided the subject has at least habitual attrition for them; and, following the analogy of penance, which with attrition remits mortal sins for the remission of which outside the sacrament perfect contrition would be required, theologians hold that with extreme unction a less perfect attraction suffices for the remission of venial sins than would suffice without the sacrament. But besides thus directly remitting venial sins, extreme unction also excites dispositions which procure their remission ex opere operantis.
The reliefs or effects of sin mentioned by the Council of Trent are variously understood by theologians to mean one, or more, or all of the following: spiritual debility and depression caused by the consciousness of having sinned; the influence of evil habits induced by sin; temporal penalties remaining after the guilt of sin has been forgiven; and venial, or even mortal, sins themselves. Of these only the remission of temporal punishment is distinct from the other effects of which the Council speaks; and though these theologians have been loath to admit this effect at all, lest they might seem to do away with the raison d'être of purgatory and of prayers and indulgences for the dying and dead, there is really no solid ground for objecting to it, if passing controversial interests are subordinated to Catholic theory. It is not suggested that extreme unction, like the other graces, materially cures temporal punishment due to sin, and the extent to which it actually does so in any particular case may, as with baptism, fall short of what was Divinely intended, owing to obstacles or defective dispositions in the recipient. Hence there is still room and need for Indulgences for the dying, and if the Church offers her prayers and applies Indulgences for adults who die immediately after the extreme unction, that is, in the case of those who have died after extreme unction. And if temporal punishment be, as it certainly is, one of the reliques of sin, and if extreme unction be truly what the Council of Trent describes (Sess. XIV, De Extr. Unct., introduct.) as "the consummation not merely of [the Sacrament of] Penance, but of the whole Carries of sickness, and with respect equal to future the assaults of the tempter in what is likely to be the last and decisive conflict in the warfare of eternal salvation. The outlook on eternity is brought vividly before the Christian by the probability of death inseparable from serious sickness, and this sacrament has been instituted for the purpose of conferring the graces specially needed to fortify the soul in its last conflict with sin. It is unnecessary to explain in detail the appropriateness of such an institution, which, were other reasons wanting, would justify itself to the Christian mind by the observed results of its use. (3) Finally, as a conditional and occasional effect of extreme unction, comes the restoration of bodily health, an effect which is vouched for by the witness of experience in past ages and in our own day. Theologians, however, have failed to agree in stating the condition on which this effect depends or in explaining the manner in which it is produced. "When it is expedient for the soul's salvation", is how Trent expresses the condition, and not a few theologians have understood this to mean that health will not be restored if the uncontrite do not undertake that a longer life will lead to a greater degree of glory —recovery being thus a sign or proof of predestination. But other theologians rightly reject this opinion, and of several explanations that are offered (cf. Kern, op. cit., pp. 195 sq.) the simplest and most reasonable is that which understands the condition mentioned not of the future but of remote event of actual salvation, but of present spiritual advantage which, independently of the ultimate result, recovery may bring to the sick person; and holds, subject to this condition, that this physical effect, which is in itself natural, is obtained mediately through and dependently upon the spiritual effects already mentioned. The fortifying of the soul by manifold graces, by which over-anxious fears are banished, and a general feeling of comfort and courage, and of humble confidence in God's mercy and peaceful resignation to His Will inspired, reacts as a natural consequence on the physical condition of the patient, and this reaction is sometimes the factor that decides the issue of certain diseases. This mediate and dependent way of effecting restoration of health is the way indicated by the Council of Trent in the passage quoted above, and the view proposed is in conformity with the best and most solid agreements of theologians on this subject, in the seemingly unanswerable difficulties involved in opposing views. Nor does it reduce this effect of extreme unction to the level of those perfectly natural phenomena known to modern science as "faith cures". For it is not maintained, in the first place, that recovery will follow in any particular case unless the patient in question is physically and spiritually in a state of grace; and, secondly, that the effect of this God alone is the judge—and it is admitted, in the second place, that the spiritual effect, from which the physical connoturally results, is itself strictly supernatural (cf. Kern, loc. cit.). (4) There remains the question, on which no little controversy has been expended, as to which of these several effects is the principal one. Bearing in mind the spiritual and temporal punishment due to sin, the sanctifying grace as imparted or increased by the sacrament, with the right or title to special actual graces corresponding to the special end of each sacrament, the meaning of the question is: Which of these effects is the sacramental grace imparted in extreme unction primarily and immediately intended to produce, so as to make the other effects dependent on it and subservient to it as means of it? Or, more ultimately, what, according to Christ's intention in instituting it, is the primary and distinctive purpose of this sacrament, its particular raison d'être as a sacrament? Now, clearly this cannot be either the remission of mortal sin or the restoration of physical health, since, as we have seen, extreme unction is primarily a sacrament of the living; and restoration of bodily health is not a normal effect, by any means, of it. For a possession of the theory held by many of the best theologians, that the supernatural invigoration of the soul in view of impending death is the chief end and effect of extreme unction. This effect, of course, is actually realized only when the subject is sui iustus capable of co-operating with grace; but the same is true of the principal effect of several other sacraments. It has been seen that the argument, therefore, against this view to point to the fact that the other effects are sometimes remitted by extreme unction while the recipient is unconscious and incapable of using the invigorating graces referred to. The infusion or increase of sanctifying grace is an effect common to all the sacraments; yet it is not by this of itself that they are distinguished from one another, but by reference to the special actual graces to which sanctifying grace as infused or increased gives a title; and if the realization of this title is sometimes suspended or frustrated, this is merely by way of an accidental exception to which, in general, sacramental efficacy is liable. It does not seem, however, that this theory should be urged in an exclusive sense, as implying, that is, that the remission of venial sin or of temporal punishment is not also a primary
effect which may be obtained independently; rather should the theory be enlarged and modified, and the primary and essential end of the sacrament so described as to comprehend these effects.

This is the solution of the whole question proposed by Kern (op. cit., pp. 81 sq., 215 sq.), who, with no little learning and ability, defends the thesis that the end of extreme unction is the perfect healing of the soul with a view to its immediate entry into glory, unless it should happen that the restoration of bodily health is more expedient. This view is quite in conformity with, and may even be said to be suggested by, the teaching of the Council of Trent to the effect that extreme unction is the means of obtaining justification. The same, however, was not the thesis of the Christian Church; and Kern has collected an imposing weight of evidence in favour of his thesis from ancient and medieval and modern writers of authority. Dr. Polhe (op. cit., pp. 533, 536) reviews Kern's suggestion sympathetically. Besides being self-consistent and free from any serious difficulty, it is recommended by many positive arguments, and in connexion with the extenuated protest "the advantage of combining and co-ordinating as parts of the principal effect—i.e. perfect spiritual health—not only the remission of venial sins and the invigoration of the soul, for which respectively Scotists and their opponents have contended too exclusively, but also the remission of temporal punishment, which not a few theologians consider essential." But theologians are not agreed as to whether or not a sick person in the state of grace is per se under a grave obligation of procuring extreme unction for the dying. It is evident ex hypot. that there is no obligation arising from the need of salvation (necessitate medii), and the great majority of theologians deny that a grave obligation per se has been imposed by Divine or ecclesiastical law. The injunction of St. James, it is said, may be understood as being merely a counsel or exhortation, not a command, and there is no convincing evidence from tradition that the Church has underwritten any other thing. A grave obligation, however, of the reasons alleged for this common teaching is open to doubt, and the strength of the arguments advanced by so recent a theologian as Kern (pp. 364 sq.) to prove the existence of the obligation which so many have denied is calculated to weaken one's confidence in the received opinion.

VIII. Necessity.—Theologians are agreed that extreme unction may in certain circumstances be the only, and therefore the necessary, means of salvation for a dying person. This happens when there is question of a person who is dying without the use of reason, and whose soul is burdened with the guilt of mortal sin for which he has only habitual attribution; and when it is certain and as often as circumstances will admit that obtaining justification are certainly or even probably unavailing, there is no doubt as to the grave obligation of procuring extreme unction for the dying. But theologians are not agreed as to whether or not a sick person in the state of grace is per se under a grave obligation of seeking this sacrament before death. It is evident ex hypot. that there is no obligation arising from the need of salvation (necessitate medii), and the great majority of theologians deny that a grave obligation per se has been imposed by Divine or ecclesiastical law. The injunction of St. James, it is said, may be understood as being merely a counsel or exhortation, not a command, and there is no convincing evidence from tradition that the Church has underwritten any other thing. A grave obligation, however, of the reasons alleged for this common teaching is open to doubt, and the strength of the arguments advanced by so recent a theologian as Kern (pp. 364 sq.) to prove the existence of the obligation which so many have denied is calculated to weaken one's confidence in the received opinion.

The Council of Trent (d. 1563) had been moved for the most part to express the wish that whenever the sick recover from the danger of death, they may be able to receive the unction of the soul, and they who have recovered from the danger of death may be able to receive it at any time, and that when they fall again into the same danger of death, they may be able to receive it again, as a means of disposing of the widespread practice in the Western Church from the ninth to the twelfth, and even, in some places, to the thirteenth century, of repeating the unction for seven days, or indefinitely while the sickness lasted; and he is able to claim the authority of Oriental theologians for explaining the modern practice in the East and the West, of unction before and after the profession of faith, as due to a more ancient practice of repeating the unction for seven days—a practice to which the Coptic Liturgy bears witness. By admit-
ting the validity of each repeated union we are able to give a much more reasonable explanation of the medieval Western and modern Eastern practice than can possibly be given by those who deny its valility. The latter are bound to maintain either that the repeated rite is merely a sacramental—which clearly intended to be a sacrament—or that the repeated unions coincide to form one sacrament—an explanation which is open to several serious objections. In the next place, since extreme union does not imprint a permanent “character”, there is no reason why its proper sacramental effect may not be increased by repetition, as happens in Penance and Holy Communion. The latter, though clearly intended to be sacrament—though clearly intended to be an act of the recipient. Thus, in regard to extreme union, the subject may be unconscious and incapable of spiritual invigoration in so far as this requires co-operation with actual grace. Or he may, for want of the necessary attituation, be indisposed to receive remission of sins, or indisposed in case of mortal sin for the infusion of sanctifying grace. And the want of disposition—the obstacle to the efficacy of the sacrament—may be inexcusable or graver culprits, if the repetition of the sacrament will be sacrilegious. Now the question is, does extreme union revive, that is, does it afterwards (during the same serious illness) produce such effects as are hindered at the time of reception, if the obstacle is afterwards removed or the requisite disposition excited? And theologians all teach that it certainly does revive in this way: that for its reviviscence, if no sacrilege has been committed in its reception, nor any grave sin in the interval, all that is needed is that the impeding defect should be removed, that consciousness, for instance, should be recovered, or habitual attrituation excited; but that, when a grave sin has been committed at or since the reception, this sin must be remitted, and sanctifying grace obtained by other means (e.g. penance). But of the possible ways in which the obligation of repetition can take effect. From this doctrine of reviviscence—which is not, however, defined as a dogma—there follows an important practical rule in regard to the administration of extreme union, viz., that, notwithstanding doubts about the dispositions of a certainly valid subject, the sacrament should always be conferred absolutely, never conditionally, since a conditionality of the dispositions of the recipient would exclude the possibility of reviviscence. The conditional form (si capax es) should be used only when it is doubtful whether the person is a valid subject for the sacrament, e.g., whether he is not already dead, whether he has been baptized, has attained the use of reason, or has the implicit habitual intention of dying in a Christian manner.

Exucontians. See Arianism.

Exul Hibernicus, the name given to an Irish stranger on the Continent of Europe in the time of Charles the Great, who wrote poems in Latin, several of which are addressed to the Irish emperor, and are sometimes identified with Dungal (see Dungal). The designation exul is one which the Irish wanderers on the Continent frequently adopted. The poems of this exile show that he was not only a poet but a grammarian and dialectician as well. They also reveal his status as that of a teacher, probably in the palace of the emperor. Of those than ordinary interest are the verses which describe the attitude of the ninth-century teacher towards his pupils. His metrical poem on the seven liberal arts devotes twelve lines to each of the branches, grammar, rhetoric, dialectic, etc., showing the origin, scope, and utility of each in succession. Like the lines on the same subject by Theodulf of Orleans, they may have been intended to accompany a set of pictures in which the seven liberal arts were represented. The style of these poems, while much inferior to that of the classical period, is free from many of the artificialities which characterize much of the versification of the early Middle Ages.

William Turner.

Exuliet, the hymn in praise of the paschal candle sung by the deacon, in the liturgy of Holy Saturday. In the missal the title of the hymn is “Praecomium”, as appears from the formula used at the blessing of the deacon: “ut digne et competenter annunties suum Paschale praecomium”. Outside Rome, the use of the paschal candle appears to have been very ancient in Italy, Gaul, Spain, and perhaps, from the reference by St. Augustine (De civ. Dei, XV, xxii) in Africa. The “Liber Pontificalis” attributes its introduction in the local Roman Church to Pope Zosimus. The formula used for the “Praecomium” was not always the “Exuliet”, though it is perhaps true to say that this formula has survived, where other contemporary formulae have disappeared. In the “Liber Ordinum”, for instance, the formula is of the nature of a benediction, and the Gelasian Sacramentary has the prayer “Deus mundi conditor”, not found elsewhere, but containing the remarkable “praise of the bee”—possibly a Vergilian reminiscence—which is found with more or less modification in all the texts of the “Praecomium” down to the present day. The regularity of the metric of “Praecomium” over “Exuliet” points to the date of its composition perhaps as early as the fifth century, and not later than the seventh. The earliest MSS. in which it appears are those of the three Galli Canonian Sacramentaries:—the Bobbio Missal (seventh
century), the Missale Gothicum and the Missale Gallicum Vetus (both of the eighth century). The earliest MS. of the Gregorian Sacramentary (Vat. Reg. 337) does not contain the "Exulteret", but it was added in the supplement to what has been loosely called the Sacramentary of Adrian, and probably drawn up under the direction of Alcuin.

As it stands in the liturgy, it may be compared with two other forms, the Blessing of Palms, and the Blessing of the Baptismal Font. The order is, briefly:

1. An invitation to those present to join with the bishop in the blessing of God, that the blessing of the candle may be worthily celebrated. This invitation, wanting in the two blessings just mentioned, may be likened to an amplified "Orate fratres", and its antiquity is attested by its presence in the Ambrosian form, which otherwise differs from the Roman. This section closes with the "Spermata intercessoria", etc.; "Surosum corda", etc.; "Gratias agamus" etc. This section serves as the introduction to the body of the "Preaeconium", cast in the Eucharistic form to emphasize its solemnity.

2. The "Preaeconium", proper, which is of the nature of a Preface, or, as it is called in the Missale Gallicanum Vetus, a contestatio. First, a parallel is drawn between the Passover and the Holy Sacrifice, with an allusion to the candle, a type of the Pillar of Fire. And here the language of the liturgy rises into heights to which it is hard to find a parallel in Christian literature. We are drawn out of cold dogmatic statement into the warmth of the deepest mysticism, to the region where, in the light of paradise, even the sin of Adam may be regarded as "truly necessary and for the glory of God."

Secondly, the candle itself is offered as a burnt-sacrifice, a type of the Body of Christ, marked by the grains of incense as with the five glorious wounds of His Passion. And, lastly, the "Preaeconium" ends with a general intercessory prayer for those present, for the clergy, for the pope, and for the Christian rulers. For these last the text as it stands cannot now be used. The head of this Byzantine Empire alone could be prayed for in this formula, and the resignation (1804) of the prerogatives of that august position, by the Emperor Francis II of Austria, has left that position unfilled to the present day.

It remains to notice three necessary accessories of the "Exulter": the ceremonial carried on during its performance; the music to which it has been sung; and the so-called "Exulterets" on which it has sometimes been written. The long oratory of a white dalmatic, that of the solemn ministers is vested in purple. The affixing of five grains of incense at the words "in consu hujus sacrifricium" has probably arisen from a misconception of the meaning of the text. The lighting of the candle is followed by the lighting of all the lamps and candles of the church, extinguishing those of the close of Matins. The chant is usually an elaborate form of the well-known recitative of the Preface. In some cases a long bravura was introduced upon the word ascendit, to fill in the pause, which must otherwise occur during the lighting of the candle. An elaborate analysis of the chant, as found in early MSS., has been published in "Palaeographische Musik" (1894), viii, 171. Dom Latil has published the text, and part of the highly ornamental at "Exulteret" at Salerno. This text is almost identical with one previously published by Duchesne from a roll at Bari. In Italy the "Preaeconium" was sung from long strips of parchment, gradually unrolled as the deacon proceeded. These "Exulteret-rolls" were decorated with illuminations and with portraits of contemporary reigning sovereigns, whose names were written in the course of the chant. The use of these rolls, as far as is known at present, was confined to Italy. The best examples date from the tenth and eleventh centuries.

EYCK

nring the degree of doctor of canon and civil law. He was also honoured by an appointment as chamberlain to Pius II. After his return to Germany he resided chiefly at Eichstatt. In 1452 he became archdeacon of Würzburg, not, however, without encountering violent opposition from the Bishop of Würzburg, who hated Eyb as a partisan of the Hohenzollern Margrave, Albrecht Achilles. Little is known of his last years.

Eyb's best known and most important work is his "Ehebüchlein" (Book on Marriage), in which he discusses the question whether a man should take a lawful wife or not, and which was published in 1472. In 1490 he had written on the same theme in Latin "An viro sapienti uxor sit ducendus". The German work treats of the joys and sorrows of married life and general maxims of a moral or philosophical character are added. A decision is finally rendered in favour of the married state. The popularity of the book is attested by the fact that between 1472 and 1540 no less than twelve reprints were issued, and another work of Eyb, the "Margarita poetica" (Nuremberg, 1472), a textbook of humanistic rhetoric, consisting of a collection of passages in prose and verse from Latin authors, to which are added specimens of humanistic eloquence. In 1474 Eyb finished his "Spiegel der Sitten" (Mirror of Morals), a lengthy work of ethical and moral content, which was, however, not published. The Latin book did not meet with the favour shown to the "Ehebüchlein" and was not printed until 1511. Appended to it are German translations of two of Plautus's comedies, the "Menächmi" and the "Bacchides" as well as of Ugofin's "Philegema". Eyb's writings have been edited by K. Müller (Sondershausen, 1879); the best edition is that of M. Herrmann, "Deutsche Schriften von R. Eyb" (Berlin, 1805).

HERRMANN, Abrechn von Eyb und die Frühzeit des deutschen Humanismus (Berlin, 1893).

ARTHUR F. J. REMY.

EYCK, HUBERT and JAN VAN, brothers, Flemish illuminators and painters, founders of the school of Bruges and consequent influence. The work of Eyck is best known in the North of Europe. Hubert was born at Maeseyck (i.e. Eyck on the Meuse) in the Diocese of Liège, about 1360, and his brother Jan about twenty years later, 1385. They had a sister named Margaret who won fame as a miniaturist. A document of 1413 makes the earliest mention we have of a painting by Master Hubert. In 1424 he was living at Ghent and his first recorded commission was for St. George, September, 1426. We have no further definite knowledge concerning the elder of the brothers. Of the younger we know that in 1420 he presented a Madonna's head to the Guild of Antwerp, that in 1422 he decorated a paschal candle for the cathedral of Cambrai, and that in 1425 he was at The Hague in the service of Jean Sans Merci. Afterwards he went to Bruges and to Lille to the court of Philip the Good, Duke of Burgundy, as peintre et varlet de chambre. He was already a man of some influence at court, and he travelled in the embassy charged to ask the hand of Isabella of Portugal for Philip, and it was his privilege to paint her portrait, "true to life", thereby fixing Philip's choice. This journey lasted from the 18th of October to the 28th of November, 1429. In 1431 he went to Hesdin to superintend, for the Duke, the work going on at the castle there; and afterwards he returned to Bruges, which he seldom left again. He married, and a child of his was baptized in 1434. In 1436 we learn once more that he received 720 livres on account of "certain secret matter", doubtless in connection with the new mission or journey. He died towards the end of June, 1441.

The most important work of the brothers Van Eyck, and the one that places their names among the great masters of painting for ever, is the famous altar-piece, "The Adoration of the Lamb", of which the central portion is preserved in St-Bavons at Ghent, while the wings have found their way to the Museums of Berlin and of Brussels. It is one of the enigmas of art. All the questions bearing on it may, however, be reduced to two: Who was its author? and, What is its origin? As to its authorship, all we know depends on an inscription obscure enough, which is to be read on the edge of its frame:—

Pieter Hubertus e Eyck major quo nemo repertus Incepit pondus; quod Johannes arte secundus Susseptit letus, Judocie Vyd prece fretus.

Versus Vanc Vanci. Cum at Ctta Veri.

The faulty Latin of this enigmatic inscription means:— "Hubert van Eyck, the greatest painter that ever lived, began this work (pondus), which John, his brother, second only to him in skill, had the happiness to continue at the request of Jodecues (Josse) Vyt. By this line, on the 6th of May, you learn when the work was completed, i.e., 1432."

Who was his author? and, What is its origin? It is their joint work, certain, but it is impossible to distinguish which portion belongs to each brother. Very soon Jan began to get all the credit for it. Dürer mentions only Jan in his "Journal" of 1521. But the inscription clearly states that Hubert began the work and asserts that he was the greater artist, his brother being called in only at his death, and in order to complete. If his work had progressed with it? How far back had he been commissioned to work? In 1426 were portions of it finished, or was it merely a sketch, a general outline when Jan took charge? Who suggested the subject? Who planned its treatment? Can we believe that a painter of any school living in a fifteenth century atmosphere could have elaborated by himself from a few texts the Apocalypse (v. 6—14) and the Schola cantorum, of the Canticles, and its imagery? Who was the theologian who inspired this mighty poem as others had inspired the learned allegories of the Chapel of the Spaniards, and of the Hall of the Segnatura? And again, in the history of painting from the miniatures of the Irish Apocalypses (eleventh century) to the Angers tapestries, what was the artistic source, and how was it used?

This moral encyclopedia of the Middle Ages, if we may call it such, treats of all things in heaven and on earth (there was a predella to it depicting hell, but it disappeared in the sixteenth century); it portrays God and man in all their historical and mystical relations; it tells us of the heavenly and the earthly paradise, of the ages that have followed one another in the history of the world, of the creation of the world, of the Redemption, of Adam and Eve, and of the first sacrifices; of the death of Abel (type of Christ); of the years of expectation of the patriarchs and just men of the Old Law; of the mystery of the Incarnation; of the Trinity; of the world subject to the law of Christ; of the life of the Church in her saints, her hermits, her virgins, her martyrs, her pontiffs, her confessors, her warrior princes; of all Christendom in a landscape filled with cathedral spires (Rome, Jerusalem, Utrecth, etc.). And can we in reason be asked to believe that this wonderful pictorial epic reaching out from the beginning to the consummation of the world and ending in a glimpse of the eternal life to come as full in conception and as orderly in arrangement as the "Divina Commedia," of Dante; or in the new painting the Old as well as the New Testament, drawing its inspiration from St. Augustine's "Civitas Dei," and Vincent of Beauvais' "Speculum Majus," as well as Jacobus de Voragine's "Legenda Aurea," and Dante's "De Monarchia"; a compendium of politics, history, and theology, and which crowns the representation of man's life on earth by a glimpse of the Infinite, can we in reason be asked to believe that this lofty expression of the ideals of Christendom in the Middle Ages sprang Minerva-like, fully formed from the brain of a single artist?

No one can adopt this supposition except for the
purpose of ascribing all the honour of having conceived this painting to the elder of the brothers. As an assumption, however, it is altogether gratuitous. There is not one of the scenes that can be attributed to Hubert with any degree of certainty; and no work the brothers Van Eyck have left us (with the exception of the "Point of Salvation" in the Prado Museum, Madrid, and this is the work of the school) shows a similar dogmatic and theological character, a like power of design and richness of thought that this "Lamb" does. Taken as a whole the work of the Van Eycks has a totally different tendency. It is frankly naturalistic in fact, as well as in intention. So that when Hubert is labelled a thinker, it is for no other reason than because in an original and important way he separated him from Jan. How futile this distinction is made clear if we look into the results obtained by applying it as a criterion to the work of the two brothers. On not a single disputed painting has agreement been reached; and every painting that has been attributed to Hubert by one connoisseur, has been adjudged by others for equally good reasons to Jan.

The catalogue of their work has been reconstructed more than twenty times. The altar-piece of the "Lamb" has been divided in a hundred different ways, and each in turn has been given to one brother and then to the other over and over again. Each year sees a new theory proposed. After Wagon came James Weale; after Hymans, Dvorak, and after Steerick, Wurzbach; and we are as far from the solution as we ever were. But one thing is certain, we will never give it up. In any case, seeing that the whole painting was retouched at least twice during the sixteenth century, all evidence of individual technical must have been buried beneath these restorations; and in all likelihood the little points and peculiarities attributed to Hubert or to Jan, are really the work of two gifted hands. But if it is true that a wider question as to such idle wranglings that can never be settled, the question as to the effect and the nature of the artistic revolution to which the brothers Van Eyck have given their name.

What constitutes the altar-piece of the "Lamb" a unique monument in the history of art, and gives it its supreme interest in our eyes, is the fact that it unites in itself, and so to say, condenses all that was new in the Flemish art of the fourteenth century, as the two principles that would seem necessary to exclude each other, like the past and the future, and that we never meet with again save in opposition. It is this that constitutes the supreme interest of the work, that it contains the noblest expression of the old mystical genius together with the most powerful example of modern naturalism. In the sincerity, breadth, and clarity with which the painter immerses himself in any school has excelled the Van Eycks. Nature, which, prior to their day, men had looked at as through a veil of formulae and symbols, they seem suddenly to have unveiled. They invented, so to speak, the world of realities. The happenings of all sorts in the world of nature, the polytomia rerum, with which they have endowed the Van Eyckian landscapes, atmosphere, types, physiognomies, a wealth of studies and sketches of all sorts, rich materials, cloths, cinars (robes), copes, brilliancy of precious stones and works of the goldsmith's art; all are copied to perfection, and the deltess of the work is beyond compare. The masterpiece inaugurates a new era in painting. If the object of the painter's art is to depict the visible world, if his aim ought to be not so much the expression of a thought as to hold up the mirror to life, then for the first time in its history painting entered into its birthright in this altar-piece, and gave proof of its legitimacy in this first attempt. Life under all its sensible forms and aspects sweeps through this mighty scene like a motif, life with all its myriad changes and variety of moods, brushing aside the dry as dust ideograms and crumbling hieroglyphics of the Middle Ages.

The absolute is abandoned, and the relative brought into fashion. The eye is turned away from the vision of the ideal, but the feet are more firmly planted on the real. The word nature undergoes a change of meaning. Once it had been a vague Platonic idea, something like the nominals and universals of the schools, which are understood by the intelligences rather than by the common man, until that lofty plane of thought in which art in the thirteenth century loved to move, the universe existed really in the intellect. Henceforth, however, nature changes her aspect for the painter; he refrains from expressing any opinion as to the essence of things, but delights in all their accidental qualities. The actual, the fact, whether it be positive, complex, capricious, or odd, becomes of moreHotel; his abstract and immutable law. The absolute cause of all things is neglected in favour of the rich and glowing vegetation of nature; principles have less value than their consequences, less importance is given to types than individuals. The vast harvest of phenomena from the ever teeming field of reality and experience is hurled forth over the artist, and it is to the painter he has actually seen; what he has found in nature; the story of his feelings in the midst of things. In this a new kind of idealism replaces the old. And art, thus freed from the academism of the Gothic tradition, was not to shivishly copy nature, but to serve as a vehicle for the expression of the painter's personality, and to act as the safest confidante of his emotional experiences.

The altar-piece at Ghent marks the triumph of this basic artistic revolution from which all modern art has sprung. Never was a richer shrine of nature and of life got together by a painter. In two hundred figures of every size, sex, race, and costume we behold a résumé of the human race. We see before us all the beauty of the vegetable scene: the flowers, the fruits, the trees, the plants, the herbs, the green and yellow mosses, the dung-beetles, the earth. And this world within doors, with all its social activities and moral customs, is portrayed. There are interiors, such as the room of the Blessed Virgin, a young Flemish maiden, with its prédicace, its nicely tilled floor, its washstand and basin, and its open window looking out on to the pointed roofs of a row of brick houses. There are portraits of a marvellous realism, such as those of the donor and his wife; epi figures, such as the old man, the invalid, the clowns, and the horse ploughing. Chrélie crowned with a triple tiara, type of the pontiff-king; and there are figures full of charm and poetry, such as the singing angels (Berlin museum), symbolizing the harmonies of paradise, under the form of entrancing minstrelsy, or of the chanting of choir boys. Other figures are fearful in their naturalism, such as the faces of the donors (Brussels museum) which would suffice alone to immortalize their creator, because of their august and majestic, the stiff and awkward manner, and their eloquent ugliness.

Such a transformation, of course, exceeds the powers of any one man, or even of two brothers. And like all great works, the altar-piece of Ghent is but the result of the labours of more than one generation. It was not a local movement; its influences were at work up and down throughout Christendom.
In Italy the work of Jacopo della Quercia, of Ghin- berti, the frescoes of Masolino and of Masaccio (1425), are contemporary with the labours of the Van Eycks, and bear traces of similar tendencies. But the birth- place of the movement was not on Italian soil. It is in France we find the earliest evidences of it, about the beginning of the fourteenth century. A few statues, like the Visitatio group in the great doorway at Reims (1310), the tombs of St. Denis, the portraits of King Charles V and his wife Eleanor (in the Louvre), mark the last stages in the victorious progress. The same epoch in which a century earlier had developed the Gothic style, comfort, and decoration, now produced the new principles and the new methods. An important factor in this evolution was the creation of the Duchies of Berry and of Burgundy, and the alli- ance of Flanders and Burgundy by marriage (1341). At the Court of the Valois, the most brilliant in the world, famous for its voluptuousness, its elegance, and its worship of all the arts of life, and under the patron- age of its princes, no less famous for their absolute lives than for their artistic taste and love of luxury, there rapidly grew up a school of painters, sculptors, goldsmiths, and miniaturists, cosmopolitans by birth, but Parisian by education, who were the nucleus of the Renaissance. The larger part of the paintings, frescoes, and stained glass in the church of St. Étienne du Mont have perished; but the miniatures supply all the proof we need. Especially in the manu- scripts made at the time for the Due de Berry do we find the links of this glorious history. Many of the books collected by this incomparable Macenas have come down to us; some of them illustrated by André Beauneveu, Jacquemart of Hesdin, or Jacques Cohn of Antwerp. The most important of all is the seignorial MS.—one of the treasures of Chantilly—known as the "Book of Hours of the Due de Berry". This wonderful book was adorned from 1413 to 1416 by three artists; "the three illuminator-brothers" spoken of by Guillebert of Metz, the brothers de Lim- bourg or simply the Limbourgs. Nearly all the poetic fancy of the Van Eycks is already outlined in this "Book of Hours", especially on their landscape side; and whereas the Limbourgs kept to the country around Liége, the Van Eycks followed the same route, and doubtless experienced the same influences. But there is something more. Another MS., "The Hours of Turin", which was unfortunately destroyed in the fire at the library of that town, 20 January, 1904, be- longs to the Due de Berry (1410) and it is addressed to Duke William IV of Bavaria-Hainburg. And it has been proved that Hubert van Eyck spent some time in the latter's service. Paul Durrieu has given very they reasons for attributing the MS. to him, and for believing that he began it for the Due de Berry. Thus the art of the Van Eycks would be but the cul- minating point of the great Renaissance movement in- augurated at the Court of the Valois in France, and which reached its apogee in 1400. Perhaps this was what the Italian Bishop Faccio meant to imply when in 1456 he spoke of Jan van Eyck as Johannes Gal- lieus. This is a partial solution of the enigma of the altar- piece. If Hubert and Jan van Eyck are but continuators, men who adopted and developed the new methods without them. But what was it they added that caused the new style in art to date only from their work? If we are to credit Vasari, Van Mander, and all the historical writers, their great discovery was the art of painting with oils. Painting with oil had been discov- ered long before; the monk Theophilus gives a recipe for it in the eleventh century. And as we have seen, the new aestheticism had been already formu- lated in the miniatures of the Limbourgs and of the Van Eycks themselves. Whatever importance in art its material and mechanical methods may have, it would be too humiliating to make it depend entirely on the particular fluid, water, gum, or albumen used in mixing the colours. Moreover, on canvases 500 years old from which all moisture has long since dried up he would be a daring critic who would venture to assert the proportion of oil or distemper used by the artist. To build one's criticism on such a doubtful premise is like seeking the scent of the "Roses of Sadi". The real merit of the Van Eycks is elsewhere. By a chain of circumstancen (The Battle of Agincourt, the madness of Charles VI, and the minority of Charles VII), France was brought to the edge of ruin, and suddenly lost control of the movement that it had begun. The main day of the court of Charles VI was spent at the new fortunes of the Duchy of Burgundy, as the home of wealth in the North. Ghent, Bruges, Brussels, Antwerp became the centres of the new school. In these new towns of little culture and traditional re- finement, and lacking in reserve (Taine, "Philosophie of the Art aux Pays-Bas")—description of the festivals known as the Vau du foison), Naturalism, freed from the restraints French taste would have imposed on it, was enabled to grow at its ease and spread without restriction. The Germanic element which had already shown itself in such men as Beauneveu, Malouel, the Limbourgs, burst out, and carried everything before it in the work of the Van Eycks. For the first time the genius of the North shook off all those cosmoliti- cal influences which had hitherto refined it, and gave itself free scope. It paused not to think of what had gone before, and it was not concerned with such things as taste, nobility, or beauty. Such preoccupations as these, as the antique began to have an influence, became more and more the distinguishing characteristics and limitation of Italian naturalism. It is enveloped in the ugly yet touching figures of Adam and Eve by Jan van Eyck, with those by Masaccio in the Brancacci Chapel to be convinced of this. On the one side there is real- ism, but the painter has seruples, reserves, a sense of modesty; on the other there is absolute crudity, what we might call naturalism pure and simple. What does this mean, but that painting, which had hitherto been a universal, international art, is beginning to localize itself; and that what had hitherto been a European, or better still, Western, colour-language is about to split up into many dialects and national modes of speech? It is the real glory of the Van Eycks, that they emancipated the genius of the races of the North and gave it its first full expression. During a few lull in the fifteenth century (1430-1470) the Bruges painters were producing new works and renew- ing its own strength. During a century, painters from Flanders, from Holland, and Germany—Petrus Kristus, Gérard de St-Jean, Onwater, Hugo van der Goes, Roger van der Weyden, Memlinck, Gérard David, Martin Schongauer, Dürer, Lucas of Leyden— never ceased to draw their inspiration more or less directly from their work. In 1445 the Catalanian Luca Dalmas made a copy of the altar-piece of Ghent. In France, Jean Fouquet, Nicolas Frémont, on the banks of the Loire and of the Rhone, were disciples of Jan van Eyck. Even Italy did not escape their sovereign influence. As early as the middle of the fifteenth century paintings by Jan van Eyck were beingtreasured in the churches of Italy. Antonioello of Messina went to study art in Flanders. Ghirlandajo imitated the famous Portinari altar- piece by II, van der Goes, and whenever an Italian painter relaxed a moment his training after art to snatch a breath of gayety or a lesson in realism, it was always to the Flemish school he turned; always, until the triumph of the antique was assured, and Raphael and Michelangelo, by the constraining revelation of its beauty, had restored for a time the reign of the ideal. Their triumph was, however, short-lived; the pagan and aristocratic ideal of art and life, with all its loftiness and rigidity, began to give way from the
beginning of the seventeenth century, with its new schools at Antwerp and Amsterdam, before the naturalism of the North, before the more homely, hearty, and winning genius of the Van Eycks. It is therefore impossible to exaggerate the importance of their work, which, besides occupying a unique position throughout the fifteenth century, led the way in which two centuries later produced such painters as Rubens and Rembrandt.

The following is a list of the signed and dated works of Jan van Eyck: The "Consecration of St. Thomas Becket" (1421—Chatsworth); "The Madonna" (1432—Ince Hall); portraits of two men (1432-1433—National Gallery); "Arnolfini and his Wife" (1434—National Gallery); "Portrait of Jan de Leeuw" (1436—Vienna); "The Virgin", with kneeling figure of Amsterdam, done by J. d'Isere, H. and J. Vers E. (Brussels, 1437—Antwerp); "Head of Christ" (1438—Berlin); "The Artist's Wife" (1439—Bruges); "The Virgin" (1439—Antwerp). The principal works without date or signature that can be certainly attributed to the brothers Van Eyck are "Portrait of an Old Man" (Vienna); "The Man with the Pinks" (Berlin); "The Madonna of Luceat" (Frankfort); "The Madonna" executed in 1444—Romanesque style, Burleigh House, Exeter; "The Virgin" (Paris, Rothschild); triptych, not completed (Van Hellenpute collection, Mechin).

Facies, De viris illustribus (1456, published at Florence, 1459); Morelli, Anonimo del secolo ditione (Bassano, 1800); Vasari, Le Vite (Florence, 1550) [preface and life of Antonello of Messina]; Van Mander, Het Schilder Boek (Amsterdam, 1672); Wagen, H. and J. Van E. Eyck, 1883; 1882; Weale, Notes on Jan van Eyck (Bruges, 1884); Idem; The Life of Jan van Eyck's Death in The Burlington Magazine (1893); Van der Werff, De voorgeschiede van de dynastie van de Eyck (Breslau, 1849); V. Leclerc and Ernest Renan, Discours sur l'état de l'art au XIVe siècle (Paris, 1856); Crowe and Cavalcaselle, The Early Flemish Painters (London, 1857); Taizé, Philosophie de l'art (Paris, 1872); Frömmert, Les maitres d'autrefois (Paris, 1876); Knockeíc, Hubert and Jan van Eyck (Bielefeld, 1879); Eysoldt, Geschichte der Weltbibliothek (Paris, 1890-1903); Durrieu, Les débuts de Van Eyck (Gazette des Beaux Arts, 1892); Les Heures de Yorin, prototype reproduction (Paris, 1905); Fromental, The呈inposition of the Primitifs Flamands, an arranged catalogue (Bruges, 1902); Dvorak, Das Rüsel der Brüder Van Eyck (Berlin, 1906); Weert, Niederländisch Kunstwinkel (Leipzig, 1906).

Louis Gillet.

eycken, Jean Baptiste Van, painter, b. at Brussels, Belgium, 16 September, 1809; d. at Senacre, 12 December, 1859. He was the son of Cornelle van Eycken, a distinguished composer, and as a boy was employed in commercial pursuits, but from 1829, when his father died, he gave himself over entirely to the study of art. In 1830 he became a member of the Academy of Belgium, in 1835 gained an important prize with high distinctions, and four years afterwards was appointed professor of drawing and painting. In 1838 he went to Italy and remained there for a year and a half. In 1839 and resuming his professorship. In that year he exhibited his great picture of "Divine Pity", which was warmly received and brought him a gold medal and a high position in the Société des Beaux Arts de France. He married in 1840 Julie Noel, who died 11 February, 1843. Two of his most important pictures were those representing "Captive Christians" and "St. Boniface", for the church of La Chapelle; but for the same church he carried out no less than fourteen pictures representing the Passion of Christ and these were exhibited in 1847 and gained for him the Order of Leopold. His best known picture perhaps is entitled "L'Abondance", a replica of which the artist was employed to make for the Prince Consort of England, according to the instructions of Louise Marie, Queen of the Belgians. He was intensely interested in the subject of mural decoration, and studied every variety of it very closely, preparing a long essay on the subject and a series of paintings representing the Beatitudes, in order to exemplify his ideas in this direction. He also gave some attention to sculpture and to designing medallions. He was a very devout man, true to his faith and to his friends, and very much respected by all who knew him. His pictures are marked by considerable religious feeling, grace, tenderness, and delicacy. (For further details, see a life of the artist published privately in Brussels by Emile van Arenbergh, no date.)

Eymard, Pierre-Julien, Venerable, founder of the Society of the Blessed Sacrament, and of the Servants of the Blessed Sacrament, b. at La Mure d'Isère, Diocese of Grenoble, France, 4 Feb., 1811; d. there 1 Aug., 1868. From early childhood he gave evidence of great holiness and most tender devotion to the Blessed Sacrament. In 1829, he entered the novitiate of the Oblates of Mary, but was compelled to return home. At the age of twenty he entered the grand seminary of Grenoble, and was ordained priest 20 July, 1834. He returned to the Marist novitiate in 1839. In 1845 he was appointed Provincial of the Oblates of Mary. His entire spiritual life was centred round the Eucharist. It was the subject of his sermons and exhortations, the object of his worship and prayer, the theme with which he inspired and exhorted those who were taught by his counsel to fix their attention on the Blessed Sacrament.

In January of 1851 Pére Eymard made a pilgrimage to the shrine of Our Lady of Fourvières, and there promised Mary to devote his life to founding a congregation of priests whose principal duty should be to honour the Blessed Sacrament. Having made the promise the young priest rented a small house in Paris, in which he and his single companion took up their abode. Here, on 6 Jan., 1857, the Blessed Sacrament was exposed, and the nascent community of two members commenced the adoration of the Blessed Sacrament as prescribed by their rule. Their founder received his first encouragement for the work in a laudatory Brief, blessing the work and its author, and signed by Pius IX, in 1854. Five years after, in 1862, Pére Eymard had enough spiritual sons to open a regular novitiate. From this date the congregation spread rapidly, until now its houses may be found in Rome, Belgium, Holland, Spain, Canada, the United States, and South America. The Servants of the Blessed Sacrament, a congregation of laywomen who carry on perpetual adoration in their convents, were also founded by him in 1858. The Priests' Eucharistic League and the Archconfraternity of the Blessed Sacrament are evidences of his zeal among priests and the faithful. Pére Eymard's writings have been collected, and form four volumes: "The Real Presence", which has been translated into English; "Retreat at the feet of Jesus Eucharistic", "La Sainte Communion", and "L'Eucharistie et la Perfection Chrétienne". These writings have received the approbation of the Holy See. The author was declared Venerable, 11 August, 1908, and the process for Pére Eymard's beatification is now in progress.

A. Letellier.

Eymeric, Nicolas, theological and inquisitor, b. at Gerona, in Catalonia, Spain, c. 1320; d. there 4 Jan., 1399. He entered the Dominican Order at an early age, receiving the habit 4 Aug., 1331, from the hands of Prior Petrus Carpi, and soon won a reputation for theological knowledge. His earliest writings, which date from 1354, were of a philosophical character. Nikola Roselli, the grand inquisitor of Aragon, having been raised to the rank of a cardinal (1356), Eymeric was appointed his successor in the Inquisition early in 1357. The zeal he displayed in his new office roused much opposition and even open enmity. In spite of
the support of Cardinal Legate Guido, Eymeric, in the interest of peace, was removed from office at the general chapter of the Dominican Order held at Perpignan in 1360. Two years later, at the general chapter held at Ferrara, he was chosen vicar of the Dominican province of Aragon. Shortly afterwards, when a provincial was to be elected for the same province, there was a hopeless division among the Dominicans, one party supporting Eymeric, the other Father Bernardo Er- minger, in whom he put his trust with much regret, was appointed neither, but ap- pointed a third, Jacopo Dominie.

Meanwhile Eymeric showed great activity as a preacher, as well as a writer on theological subjects. Some years later he was again made inquisitor general of Aragon; we find him in this office in 1366, and several tracts on dogmatic subjects date from the years immediately following. He combated in par- ticular Raymond Lulli, in whose writings he found numerous errors. He influenced Gregory XI to for- bid the faithful to read certain writings of Lully's and to condemn by a special decree (26 Jan., 1376) several theses extracted from his works. Eymeric was in high esteem with King Pedro IV of Aragon, as well as with Gregory XI. In 1376 he visited the papal court at Avignon, and accompanied the pontiff on his way to the election of Urban VI and the nomination of the antipope Clement VII, whose claims he vigorously championed against those of the Roman pope. Towards the end of 1378 he re- turned to Aragon, but in the interests of his office as grand inquisitor often went to the court of Clement VII at Avignon. Eymeric continued his campaign against the Lullists by word as well as by pen. In his "Tractatus contra doctrinam Raymondum Lulli", dedicated to Clement VII, he indicates 135 heresies, 38 errors, and many misleading statements of Lully. He also composed a "Dialogus contra Lullistas" and other tracts. Lully's partisans, however, won over to their side, soon after his accession, King John I of Aragon. Eymeric was banished and went to the papal court of Avignon, where he was welcomed both by Clement VII and later by Benedict XIII. He wrote numerous theological works and also special tracts defending the legitimacy of the Avignon popes, e.g. his "Tractatus de potestate papali" (1383), which he composed for Clement VII, and two tracts for Benedict XIII. Notwithstanding his sentence of banishment, he still retained his post of grand inquisi- tor of Aragon, to which he was later returned, and compiled, as a guide for inquisitors, his "Directorium inquisitorum", the only one of his more extensive works that was afterwards printed (Barcelona, 1503; Rome, 1578, ed. Francesco Pegna, with a copious commentary; re-issued several times). Towards the end of 1387 Ey- meric returned to his native land and his monastery of Gerona, where he died. His epitaph describes him as praedicator veritatis, inquisitor inrepidus, doctor eccle- 

QUÉTHÉ AND ECHARD, Script. ord. precl. (Paris, 1719), 1, 799- 

17, with the titles of thirty-five of Eymeric's works, contained in the Vigna, Monumenta Aragoniæ (Grasse, 1906), 710-12; EHRE in Archiv für Literatur- und Kirchen- gesch. des M. A., I, 43 sqq.

J. P. KIRCH.

EYRE, Thomæ, first president of Ushaw College; b. at Glosop, Derbyshire, in 1748; d. at Ushaw, 8 May, 1810. He was the fourth son of Nathaniel Eyre and Jane Broomhead. On 24 June, 1768, he, with his brothers Edward and John, arrived at Esquerin, near Douai, the preparatory school for the English college. Having passed through school and college alike with credit, he remained after his ordination as general prefect and master of the classes known as rhetoric and poetry. In 1775 Mr. Eyre returned to England to take charge of the Stella mission near Newcastle, on the invitation of his kinsman, Thomas Eyre. While here he brought out a new edition of the works of Guther and also made a collection of mate- rials (now in the Ushaw archives) with the intention of continuing Dodd's "Church History". His scheme for a new edition of Bishop Challoner's Bible was given up at the request of Bishop Thomas Talbot. In 1792 he removed from Stella Hall to Wooler and thence to Pontop Hall in Durham. In 1794 Bishop Gibson de- sired him to take charge of the Northern students who had been expelled from Douai, and who were thereafter temporarily at Tudhoe under Lingard, the famous historian, who had not yet been ordained priest. Mr. Eyre removed these students first to Pontop Hall and in October, 1794, to Crook Hall, where he became president of the new college. Though he was willing to resign this post in favour of Mr. Daniel, president of Douai, this suggested arrangement came to nothing and Mr. Eyre remained president. In 1800 it was stated that Eyre was bought by the bishop, and here, early in 1804, the new college was begun, and in July, 1808, Mr. Eyre began to remove his community thither. On 2 August he himself entered and the transfer of St. Cuthbert's College from Crook Hall to Ushaw was complete. Mr. Eyre died at Ushaw, leaving a considerable sum to the college for general purposes. It is believed that Guther's works he brought out, in separate form, Guther's "In- structions for Confirmation" (Newcastle, 1783), and Gabinet's "Instruction of Youth in Christian Piety".

EDWIN BURTON.

Eyston, Charles, antiquary, b. 1667; d. 5 Nov., 1721; he was a member of the ancient family of Eyston, then and still of East Hendred, their house being one of the few places in England where the Blessed Sacrament has always been preserved. He was eldest son of George Eyston and of Ann, daughter of Robert Dormer of Peterley. On the death of his father in 1691 he succeeded to the family estates, and in 1692 married Winefrid Dorothy, daughter of Basil Fitzherbert of Swinnerton, Staffordshire, by whom he had a large family. He was a good scholar and it was in his antiquarian researches that he became a friend of Thomas Hearne, who wrote of him: "He was a Roman Catholick and so charitable to the poor that he gave away almost all that he possessed. He was a man of a sweet temper and was an excellent scholar and so modest that he did not care to have it at any time mentioned." (Reliq. Hearnianæ, cit. inf.) On his death he was succeeded by his son, Charles. It is generally stated that another of his sons joined the Jesuits, but though his son, William George, entered the Society in 1730, he left it almost at once. Several of his daughters became nuns. He wrote: "A little Monument to The Once Famous Abbey and Borough of Glastonbury", published by Hearne in his "History and Antiquities of Glastonbury" (Oxford, 1722); re-printed by the Rev. R. Warner in his "History of the Abbey of Glastonbury and the town of Glastonbury" (Bath, 1820). There is in the library at Hendred an unpublished MS. entitled "A Poor Little Monument of all the Old Pious Dissolved Foundations of England; or a Short History of Abbeys, all sorts of Monas- teries, Colleges, Chapels, Chantries, etc." Another MS. mentioned under his name by Gillow was merely his property and not his work; and the same writer corrects Charles Butler's error in ascribing to Eyston a "History of the Reformation", published in 1855.

EDWIN BURTON.
Ezechiel (Heb. יְהֹאָכִיל, or יְהוֹעֵכִיל = "The Lord strengthens him"; Sept. יְהוֹעֵכִיל; in the cuneiform inscriptions Ha-za-qî-ya-hu), King of Juda, son and successor of Aehaz. We learn from IV Kings, xviii, that he began his reign in the third year of Osee, King of Israel, that he was then twenty-five years of age, that his reign lasted twenty-nine years, and that his mother was Abi, daughter of Zacharias. The account of his reign is beset with unsolved chronological difficulties, and there exists a difference of opinion among scholars as to the year in which he ascended the throne. The commonly received computation reckons his reign from 726 to 697 B. C. In character and policy, Ezechiel was pious and agreeable to God. He was a strenuous civil and religious reformer, and on this account was often compared with David. The events of his reign are related in the Fourth Book of Kings, and also in the parallel account in the Second Book of Paralipomenon, but in the latter, as might be expected, stress is laid chiefly on the religious reforms which he carried out, whereas the earlier account mentions these briefly, and dwells at greater length on the civil and political aspects of his reign.

Among the religious reforms are mentioned the purification of the Temple, which had been closed by Aehaz, the irreligious predecessor of Ezechiel (II Par., xxviii—xxix), the resumption and proper celebration of the feast of the Passover which had been neglected (II Par., xxx), and in general the extirpation of idolatry, and the reorganization of the Hebrew worship (IV Kings, xxv—xxvi). In a time of national distress, when the twenty-fifth chapter of Proverbs, it is stated that the sayings contained in the following collection (xxv—xxix) were copied out by the "men of Ezechiel". This would seem to indicate, on the part of the king, some literary interest and activity, and in the Talmudic tradition these "men of Ezechiel" are credited with the composition of several books of the Old Testament. Soon after his accession to the throne Ezechiel threw off the yoke of the Assyrians, to whom his father had become a vassal (IV K., xviii). Other notable events of his reign are his sickness and miraculous cure, the embassy of Berodach Baladan, and the invasion of Sennacherib. The story of the sickness of Ezechiel is narrated in IV K., xx, and in Is., xxxviii. The king became sick with a mortal disease, and the prophet Isaia comes in the name of Yahweh to warn him to put his affairs in order, for he is about to die. But Ezechiel prays to the Lord, who sends the prophet back to announce to him that he will recover, and that fifteen years are to be added to his life. As a sign of the fulfilment of this promise, Isaia causes the shadow to recede a distance of ten lines on the sundial. "Counsellor", with this event is the sending of an embassy by Berodach Baladan, King of Babylon, who having heard of the illness of Ezechiel, sent messengers to him with presents. The motive of this action on the part of the Babylonian king was probably to enlist the services of Ezechiel in a league against Sennacherib, King of Assyria. Ezechiel received the envoys with great honour, and exhibited to them the treasures which he had accumulated during the time of war. This spirit of ostentation was displeasing to the Lord, and Isaia was sent to announce that the treasures, in which the king seemed to place his confidence, would be all carried off as plunder to Babylon. Not long afterwards (according to the cuneiform inscriptions, in the year 701), Sennacherib undertook a great campaign against Syria, Cumea, and Egypt, and a number of these expeditions are told from the Assyrian standpoint, in the official cuneiform inscription known as the Taylor prism. The plan of Sennacherib was, first, to vanquish the kings of Ascalon, Sidon and Juda who had formed a coalition against him, and then to turn his attention to the land of the Pharaohs. After subduing Ascalon and Aearcon, the Assyrian invader captured and plundered all the fortified towns of Juda, and carried their inhabitants into exile. Then he besieged Jerusalem, and Ezechiel, finding himself shut up "like a bird in a cage", resolved to come to terms with his enemy. Sennacherib demanded thirty talents of gold and three hundred talents of silver, and, in order to supply it, Ezechiel was obliged to yield up not only the contents of the royal treasury, but also the silver belonging to the Temple, and the plates of gold which were on the doors thereof (IV K. xxviii). But when in addition to this, the Assyrian demanded the surrender of Jerusalem with a view to carrying its inhabitants into exile, the courage of Ezechiel was revived, and he prepared himself for a vigorous defence. Jerusalem was besieged, but was not repulsed, and the king taking counsel with the prophet Isaia turned in supplication to Yahweh; he received the assurance that the enemy would soon abandon the siege without doing any harm to the city. This prophecy was shortly verified when the angel of the Lord having slain in the night 185,000 of the besieging forces, the remainder fled with Sennacherib, and returned to Assyria. Ezechiel survived this deliverance only a few years, and he was buried with great pomp in the tomb of the sons of David (IV K. xx, 21; II Par. xxxxi, 33).

James F. Driscoll.

Ezechiel, whose name, Yehézq'el (יְהוֹעֵכִיל) signifies "strong is God", or "whom God makes strong" (Ezech., i, 3; iii, 8), was the son of Buzi, and was one of the priests who, in the year 598 B. C., had been deported together with Joachim as prisoners from Jerusalem (IV Kings, xxiv, 12-16; cf. Ezech., xxxxi, 22-27). With the other exiles he settled in Tell-Abbâr near the Chobar (Ezech., i, 1; iii, 15) in Babylon, and seems to have spent the rest of his life there. In the fifth year after the captivity of Joachim, and according to some, the thirtieth year of his life, Ezechiel received his call as a prophet (Ezech., i, 2, etc.) in the vision which he describes in the beginning of his prophecy (Ezech., i, 1; iii, 15). From Ezech. xxvi, 17 it appears that he prophesied during at least twenty-two years.

Ezechiel was called to foretell God's faithfulness in the midst of trials, as well as in the fulfilment of His promises. During the first period of his career, he foretold the complete destruction of the kingdom of Juda, and the annihilation of the city and temple. After the fulfilment of these predictions, he was commanded to announce the future return from exile, the re-establishment of the people in their own country, and, especially, the redemption within the Kingdom of the Messiah, the second David, so that the people would not abandon themselves to despair and perish as a nation, through contact with the Gentiles, whose gods had apparently triumphed over the God of Israel. This is the principal burden of Ezechiel's prophecy, which is divided into three parts. After the introduction, the vision of the calling of the prophet (Ezech., i-iii, 21), the first part contains the prophecies against Juda before the fall of Jerusalem (Ezech., iii, 22-xxiv). In this part the prophet declares the hope of saving the city, the kingdom, and the temple to be vain, and announces the approaching judgment of God upon Juda. This part may be subdivided into five groups of prophecies:

(1) After a second revelation, in which God discloses to the prophet His course of action (iii, 22-27), the prophet foretells by symbolic acts (iv, v) and in words (vi-vii), the siege and capture of Jerusalem, and the desolation of Juda. (2) In a prophetic vision, in the presence of the elders of Israel, God reveals to him the cause of these punishments. In spirit he witnesses...
the idolatry practised in and near the temple (viii); God commands that the guilty be punished and the faithful be spared (ix); God's majesty departs from the temple (x), and also, after the announcement of guilt and punishment, from the city. With this the judgment which the prophet communicates to the exiles ends (xi).

(3) In the third group (xii-xix) many different prophecies are brought together, whose sole connexion is the relation they bear to the guilt and punishment of Jerusalem and Judah. Ezechiel prophesies by symbolic actions the exile of the people, the flight of Seducias, and the devastation of the land (xii, 1-20). Then follow Divine revelations regarding belief in false prophecies, and disbelief in the very presence of

false prophecies. This was one of the causes of the horrors (xii, 21-xiv, 11), to be visited upon the remnant of the inhabitants of Jerusalem (xiv, 12-23). The prophet likens Jerusalem to the dead wood of the vine, which is destined for the fire (xv); in an elaborate denunciation he represents Judah as a shameless harlot, who surpasses Samaria and Sodom in malice (xvi), and in a new simile, he condemns King Seducias (xvii). After a discourse on the justice of God (xviii), there follows a further lamentation over the princes and the people of Judah (xix). In the presence of the elders the prophet denounces the whole people of Israel for the abominations they practised in Egypt, in the Wilderness, and in Canaan (xx). For these Juda shall be consumed by fire, and Jerusalem shall be exterminated by the sword (xxi). Abominable is the immorality of Jerusalem (xxii), but Juda is more guilty than Israel has ever been (xxiii).

(5) On the day on which the siege of Jerusalem began, the prophet represents, under the figure of the rusty pot, what was to befal the inhabitants of the city, On the occasion of the death of his wife, God forbids him to mourn openly, in order to teach the exiles that they should be willing to lose that which is dearest to them without grieving over it (xxiv).

In the second part (xxx-xxxi), are gathered together the prophecies concerning the Gentiles. He takes, first of all, the neighbouring peoples who had been exalted through the downfall of Juda, and who had humiliated Israel. The fate of four of these, the Ammonites, the Moabites, the Edomites, and the Philistines, is condensed in chapter xxv. He treats more at length of Tyre and its king (xxvi-xxxviii, 19), after which he casts a glance at Sidon (xxxviii, 20-26).

Six prophecies against Egypt follow, dating from different years (xxxix-xliv). The third part (xlv-lii) is occupied with the Divine utterance, which is the subject of Israel's restoration. As introduction, we have a dissertation from the prophet, in his capacity of authorized champion of the mercy and justice of God, after which he addresses himself to those remaining in Juda, and to the perverse exiles (xxxiii).

The manner in which God will restore His people is only indicated in a general way. The Lord will rebuke the evil shepherds to perish; He will gather in, guide, and feed the sheep by means of the second David, the Messiah (xxxiv).

Though Mount Seir shall remain a waste, Israel shall return unto its own. There God will purify His people, animate the nation with a new spirit, and reestablish it in its former splendour for the glory of His name (xxxv-xxxvi). Again, and again, and again, and again, and the dry bones shall be covered with flesh and endowed with life before the eyes of the prophet. Ephraim and Juda shall, under the second David, be united into one kingdom, and the Lord shall dwell in their midst (xxxvii).

The invincibility and indestructibility of the restored kingdom are thus symbolically proclaimed in this magnificent vision of triumph, of peace, and of life, and of the annihilation of his armies (xxxviii-xl). In the last prophetic vision, God shows the new temple (xl-xlii), the new worship (xliii-xliv), the return to their own land, and the new division thereof among the twelve tribes (xlvi-xlvi), as a figure of His foundation of a kingdom where He shall dwell among His people, and where He shall be served in His tabernacles according to strict rules, by priests of His choice, and by the prince of the house of David.

From this review of the contents of the prophecy, it is evident that the prophetic vision, the symbolic actions and examples, comprise a considerable portion of the book. The completeness of the description of the vision, actions and similes, is one of the many causes of the obscurity of the book of Ezechiel; but it is often difficult to distinguish between what is essential to the matter represented, and what serves merely to make the image more vivid. On this account it happens that, in the circumstantial descriptions, words are used, the meaning of which, inasmuch as they occur in Ezechiel only, is not determined. Because of this obscurity, a number of copyist mistakes have crept into the text, and that at an early date, since the Septuagint has some of them in common with the earliest Hebrew text we have. The Greek version, however, includes several readings which help to fix the meaning. The genuineness of the book of Ezechiel is generally conceded. Some few consider chapters xl-xlvi to be apocryphal, because the plan there described in the division of the land according to strict rules, by priests of His choice, and by the prince of the house of David, but they overlook the fact that Ezechiel here gives a symbolic representation of the temple, that was to find spiritual realization in God's new kingdom. The Divine character of the prophecies was recognized as early as the time of Jesus the son of Sirach (Eccles. xl, 10, 11). In the New Testament, there are no quotation references, but allusions to the prophecy and figures taken from it are frequent. Compare St. John, x, 10 etc. with Ezech., xxxv, 11 etc.; St. Matthew, xiii, 22, with Ezech., xvii, 23. In particular St. John, in the Apocalypse, has often followed Ezechiel. Compare Apoc., xviii-xxi with Ezech., xxvii, xxxviii etc., xlvii etc.
Eziongeber. See Asiongeber.

Eznik, a writer of the fifth century, b. at Golp, in the province of Taikh, a tributary valley of the Chorokh, in Northern Armenia. He was a pupil of Isaac, the catholicos, and of Mesrop. At their request he went first to Edessa, then to Constantinople to perfect himself in the various sciences and to collect or copy Syriac and Greek manuscripts of the Bible, and the writings of the Fathers of the Church. He returned to Armenia after the Council of Ephesus (431), and is probably identical with the Eznik who, in the eleventh century, was ordered to take part in the Synod of Artashat in 449. In addition to his labours in connexion with the new version of the Bible (see Versions of the Bible) and various translations, he composed several works, the principal of which is his remarkable treatise "Against the Sects". It was written between 441 and 449, and contains four books or chapters. In the first, against the heathens, Eznik combats the eternity of matter and the substantial existence of evil. In the second he refutes the chief doctrines of Parsecianism. The third is directed against the Greek philosophers (Pythagoreans, Platonists, Peripatetics, Stoics, and Epicureans), the writer taking his arguments from the Bible rather than from reason. The fourth book is an exposition and refutation of Marcionism. In the work Eznik displays much acumen and an extensive erudition. He was evidently as familiar with Persian as with Greek literature. His Armenian diction is of the choicest classical type, although the nature of his subject-matter forced him to use quite a number of Greek words. The work "Against the Sects" was first published at Smyrna in 1702; again, much more correctly and from several manuscripts, by the Mechitarists at Venice in 1826 and in 1865. An indifferent French translation was made by LeVaillant de Florival, "Réfutation des différentes sectes", etc. (Paris, 1853). A good German translation is that by J. M. Schmid, "Eznik von Kolb, Wider die Sekten" (Leipzig, 1900). Langlois published in 1885, a general introduction to the whole treatise and a translation of part of book II (section 5, 1-11, containing Magism) in his "Collection des historiens anciens et modernes de l'Arménie", II, pp. 371 sq. Eznik is also the author of a short collection of moral precepts, printed with his more important treatise.

H. Hyvernat.

Ezzo, a priest of Bamberg in the eleventh century, author of a famous poem known as the "Song of the Miracles of Christ" (Cantilena de miraculis Christi), or the "Anegenge" or "Beginning". The poem was found by Barack in a Strasburg MS. of the eleventh century, but only a few strophes are given. The whole song, thirty-four strophes, is preserved, though in a later version, in the Vorau MS. The "Vita Altamanni" relates that in 1085, when rumours of the approaching end of the world were rife, many people started on a pilgrimage to Jerusalem under the leadership of Bishop Gunther of Bamberg, and that Ezzo composed the poem on this occasion. The opening strophe of the Vorau MS. does not mention the pilgrimage, but simply states that the bishop ordered Ezzo to write the song. The effect, we are told, was such that everybody hastened to take monastic vows. The poem is written in the East Franconian dialect; it relates in earnest language the Creation, Fall, and Redemption of mankind. It was edited by P. Piper (op. cit. infra) and Steinmayer (in Mullenhoff and Scherer "Denkmaler deutscher Poesie und Prosas aus dem VIII-XII Jahrhundert", Berlin, 1892).

Arthur P. J. Remy.
F

Faa di Bruno, Francesco, an Italian mathematician and priest, b. at Alessandria, 7 March, 1825; d. at Turin, 26 March, 1888. He was of noble birth, and held, at one time, the rank of captain-of-staff in the Sardinian Army. Coming to Paris, he resigned his commission, studied under Cauchy, an admirable type of the true Catholic savant, and Leverrier, who shared in the discovery of the planet Neptune, and he became intimate with Abbé Moigno and Hermite. On his return to Turin, he was ordained, but the remainder of his life was spent as Professor of Mathematics at the University. In recognition of his achievements as a mathematician, the degree of Doctor of Science was conferred on him by the Universities of Paris and Turin. In addition to some ascetical writings, the composition of some sacred melodies, and the invention of some scientific apparatus, Faa di Bruno made numerous and important contributions to mathematics. These include about forty original articles published in the "Journal de Mathématiques" (Liouville), Crelle's "Journal", "American Journal of Mathematics" (Johns Hopkins University), "Annales di Tortolini", "Les Mondes", "Comptes rendus de l'Académie des sciences", etc., the first half of an itinerario on the theory and applications of elliptic functions which he planned to complete in three volumes; "Théorie générale de l'élimination" (Paris, 1850); "Calcolo degli errori" (Turin, 1867), translated into French under the title of "Traité élémentaire du calcul des erreurs" (Paris, 1869); and most important of all, "Théorie des formes binaires" (Paris, 1876), translated into German (Leipzig, 1881). For a list of the memoirs of Faa di Bruno, see the "Catalogue of Scientific Papers of the Royal Society" (London, 1868, 1877, 1891), t. II, vii, and ix.

Faa di Bruno, Joseph. See Pious Society of Missions.

Faber, Felix. German writer, b. about 1441 at Zurich, of a famous family commonly known as Schmid; d. in 1502 at Ulm, Germany. He made his early studies under the Dominicans at Basle and Ulm, where he spent the greater part of his life. He became a master of sacred theology, was head preacher at Ulm during 1477–78, became provincial of the German province in 1486, attended two general chapters of his order in 1480, and made a pilgrimage to Palestine and Syria in 1483–4. He wrote two accounts of his travels, one in German (Ulm, 1556); the other in Latin. The former is rather brief; the other is very complete and accurate in its descriptions of the places visited, and is of great value to students of Palestinian topography, who recognize Faber as the most distinguished and learned writer of the fifteenth century. This work was republished by the Stuttgart Literary Society in three octavo volumes (1843–49) under the title, "Fr. Felix Fabri Evagatorium in Terrae Sanctae, Arabie et Aegypti Peregrinationem". He was also the author of a versified pilgrim's book, edited by Birlinger (Munich, 1864). In 1480 Faber completed a history of the Swiss (Historia Suevorum) down to that year. Goldast, in his preface to the Frankfort edition of 1604 (later ed., Ulm, 1727), says of him that he was praised by few but copied by many. Faber translated a life of Blessed Henry Suso from the Latin. Some of his manuscripts are still unpublished.

Arthur L. McMahon.

Faber, Frederick William, Oratorian and devotional writer; b. 28 June, 1814, at Calverley, Yorkshire, England; d. in London, 26 Sept., 1883. After five years at Harrow School he matriculated at Balliol in 1832, became a scholar at University College in 1834, and a fellow of that College in 1837. Of Huguenot descent, Faber was divided in his university days between a tendency to Calvinism, in the form of individual pietism, and the Church theory then being advocated by Newman. Eventually the latter triumphed, and Faber threw himself unreservedly into the Tractarian movement and cooperated in the translation of the works of the Fathers then in progress. He received Anglican ordination in 1839, and took work as a tutor, till, in 1843, he was appointed Rector of Elton, Northamptonshire. During the years 1839-1843 Faber made two continental tours, and his letters give strikingly poetic descriptions of the scenes he visited, and they glow with enthusiasm for Catholic rites and devotion. On his return to Elton in 1844, he established the practice of confession, preached Catholic doctrine, and wrote the life of St. Wilfrid, openly advocating the claims and supremacy of Rome.

In October 1845, Newman was received into the Church at Littlemore; in November, Faber was also received by Bishop Waring, at Northampton. In 1846, Faber established a religious community, the "Brothers of the Will of God" or "Wilfridians," as they were called from St. Wilfrid, their patron, at Cotton Hall, near Cheadle, Staffordshire, the gift of the Earl of Shrewsbury. In 1847 Faber was ordained priest and with his zealous community, now forty in number, converted the whole parish, except the parson, the pew-opener, and two drunken men. In 1848, Newman arrived from Rome with his new congregation of the Oratory of St. Philip Neri, and established himself at Old Oscott, Birmingham, then renamed Maryvale. With singular disinterestedness, Faber placed himself under Newman as a simple novice, taking with him all his community who were willing to follow his example. In 1849 he was sent by Newman to found the Oratory at King William Street, London, and was appointed its superior. In the poor chapel there, once a tavern, Faber laid the foundation of his future works. Poor schools, nightly services, and sermons with hymns and processions of the Blessed Sacrament, till then unknown, formed its chief

Frederick William Faber
Faber, Johann, of Heilbronn, controversialist and preacher; b. 1540; died in Vitry-le-François; d. at Augsburg, 27 Feb., 1538. At the age of six he entered the Dominican Order and made his ecclesiastical studies in the convent at Wimpfen. Of his earliest missionary labours little is known. In 1534 he was charged with the duty of preaching in the cathedral of Augsburg, but owing to the Lutheran heresies and the bitter attitude of the heretics towards the Church, in consequence of which the Catholics were forbidden to preach, his usefulness there was of short duration. Thence he went to the University of Cologne, where he devoted himself for several years to the higher clerical studies. Here he published in 1535 and 1536 several unedited works of the English mystic, Richard Rolle. Returning to Wimpfen he engaged in similar work, but on July 16th, 1536, of the Reformation, which had already taken deep root and had a large portion of the people. His unwaried zeal, however, in upholding the ancient Faith and the marvellous results attending it, caused his enemies to turn against him with such bitterness that he was forced to leave the city. In 1539, at the solicitation of the citizens of Colmar, he proceeded to that city, where the new doctrine had taken root.
under the presidency of Peter Canisius, who succeeded him later in the pulpit of Augsburg. In the following year he went again to Augsburg, where he died. Faber was a man of vast theological erudition. His zeal to stem the tide of heresy and the invincible courage he evinced in exposing the prevailing errors brought him into conflict with many heretical leaders. He is the author of a number of excellent works, including the following: (1) "Quod fames esse posit in caritate, expositionem patet aliqua" (Augsburg, 1548); (2) "Testimonium Scripturae et Patrum B. Petrum apostolorum Rome fuisset" (Antwerp, 1553); (3) "Gründliche Beschreibung des populärius declamationibus" (Cologne, 1558); (4) "Enchiridion Bibliorum conciliatorum in popularius declamationibus utile" (Cologne, 1558); (5) "Prelectiones Christianae ex sacris litteris et D. Augustino singulario studio concinnae et selectae" (Cologne, 1586).

MICHAEL BIIH.

Faber Stapulensis. See Lefebvreb d'Étaples, Jacques.

FABER, Peter. See Peter Faber, Saint.

Faber (FABER), PHILIP, theologian, philosopher, and noted commentator of Duns Scotus; b. in 1561, Spergola di Brisighella, district of Faenza, Italy, and d. at Padua, 28 Aug., 1630. In 1582 he entered the Order of St. Francis (Conventuals), at Cremona. After completing his studies, he taught in various monastic schools till he was appointed professor of philosophy in 1603, and in 1606 professor of theology, at the University of Padua, where he lived a life of sanctity. In 1625 he was elected provincial of the order, and he again took up his work as professor, exposing the teachings of Duns Scotus with ability and judgment, and abandoning the superlative style of other commentators. His most important works are: "Philosophia naturalis Scoti in theorematata distributae" (Parma, 1610; reprinted at Venice, 1630, 1616, 1622, and at Paris, 1622); "Commentaria in quatuor libros sententiarum Duns Scoti" (Venice, 1613; 3rd ed. Paris, 1622); "De Predestinatione" (Venice, 1623), a supplement to the first book of the "Sentences"; "De restitutione, et extrema unctione" (Venice, 1624), an addition to the fourth book of the "Sentences"; "A treatise de Sacramentis Ordinis, prenix et censures" (Venice, 1628). His works "De Privato Petri et Romani Pontificis" and his "Commentaries on the Metaphysics of Aristotle" were published, after Faber's death, by his friend Matthew Fehrenius, O.F.M., who prefaced the "Commentaries", with a biography of the author.

FABER, Matthias, writer and preacher, b. at Altomünster, Germany, Feb. 1586; d. at Tyron, 26 April, 1638. He entered the ecclesiastical state, becoming a canon of the parish of St. Maurice at Ingolstadt, and was a professor at the University of that city. His sermons had already won for him a reputation as a sacred orator when he entered the Society of Jesus at Vienna. He was then fifty years old. The sermons which he has left are remarkable for soundness of doctrine, and learning. He is a man more a controversialist than an orator in the ordinary sense of the word. His object in preaching was, before everything, either to convert heretics, or to safeguard Catholics from the false doctrines of the Reformation. According to the custom of the times he made extensive use of Scriptural texts, which crowd his discursive sermons and render the reading of them difficult. They are also written in Latin, and have been published in various editions.

LOUIS LALANDE.

Faber, Johann Augustus, theologian, b. at Friebourg, Switzerland, c. 1170; d. about 1331. He entered the Dominican Order, probably in the imperial court of Germany, where he passed the greater part of his religious life. In this country he lost his name Augustus. He obtained the degrees of Master and Doctor of Divinity, was made (1511) Vicar General of the Dominican Congregation of Upper Germany, and for twenty years filled the office of prior in the Augsburg Convent. He rebuilt (1512-1513) the Dominican church in that city, for which some of the funds were obtained through the preaching of a jubilee permitted by Leo X and so, after a prohibition, by the Emperor Maximilian I. Maximilian made him court preacher and royal counselor. On the recommendation of Erasmus, with whom he was very friendly, he was again appointed to these offices by Maximilian's successor, Charles V. Sympathizing with the Luthersans in their revival of classical learning, he advocated a plan for the treatment of Luther and his followers that the ecclesiastical superiors could not accept. When he withdrew this, and broke away from the humanists, he received the abuse of Luther, and also of his former supporter Erasmus, who had already been provoked by his censure, published anonymously an attack on the new errors. The accusation made by Erasmus, that Faber was implicated in Cardinal Cajetan's trial has not been proved.
bishop and martyr." The decretals ascribed to him in Pseudo-Istio are apocryphal.

**P. Gabriel Meier.**

**Fabiola**, Saint, a Roman matron of rank, d. 27 December, 399 or 400. She was one of the company of noble Roman women who, under the influence of St. Jerome, gave up all earthly pleasures and devoted themselves to the practice of Christian asceticism and to charitable work.

At the time of St. Jerome's stay at Rome (382-84), Fabiola was not one of the ascetic circles which surrounded him. The next year, on a later date that, upon the death of her second consort, she took the decisive step of entering upon a life of renunciation and labour for others. Fabiola belonged to the patrician Roman family of the Fabia. She had been married to a man who led so vicious a life that to live with him was impossible. She obtained a divorce from him according to Roman law, and, contrary to the ordinary course of things, she entered upon a second union before the death of her first husband.

On the day before Easter, following the death of her second consort, she appeared before the gates of the Latin basilica, dressed in penitential garb, and denounced in public for her sin, an act which made a great impression upon the Christian population of Rome. The family of Fabia formally again into full communion with the Church.

Fabiola now renounced all that the world had to offer her, and devoted her immense wealth to the needs of the poor and the sick. She erected a fine hospital at Rome, and waited on the inmates herself, not even shunning those afflicted with repulsive wounds and sores. Besides this she gave large sums to the churches and religious communities and at other places in Italy. All her interests were centred on the needs of the Church and the care of the poor and suffering. In 395, she went to Bethlehem, where she lived in the hospice of the convent directed by Paula and applied herself, under the direction of St. Jerome, with the greatest zeal to the study and ascetic life of the Law and Scriptures, and to ascetical exercises.

An inursion of the Huns into the eastern provinces of the empire, and the quarrell which broke out between Jerome and Bishop John of Jerusalem respecting the teachings of Origen, made residence in Bethlehem unpleasant for her, and she returned to Rome. She remained, however, in correspondence with St. Jerome, who at her request wrote a treatise on the priesthood of Aaron and the priestly dress. At Rome, Fabiola united with the former senator Pammachius in carrying out a great charitable undertaking; together they erected at Porto a large hospice for pilgrims coming to Rome. Fabiola also continued her usual personal labours in aid of the poor and sick until her death.

Her funeral was a wonderful manifestation of the gratitude and veneration with which she was regarded by the Roman populace. St. Jerome wrote a eulogistic memoir of Fabiola in a letter to her relative Oceanus.

**Fabre**, Joseph, second Superior General of the Oblates of Mary Immaculate, b. 14 November, 1824, at Cuges, Bouches-du-Rhône, France; d. at Royaumont near Paris, 26 October, 1892. He first studied at the Lycées of EA Montpellier, and at the University of the same city, and made his novitiate in the Congregation of the Oblates, pronouncing his final vows 17 February, 1845. After teaching philosophy for some time, he was ordained priest, 29 May, 1847.

He was Director of the Grand Séminaire of Marseilles when, in 1850, a general chapter elected him procurator of the whole Institute. The Bishop of Marseilles, who was also the superior and founder of the Oblates, made him his trusted confidant; and when that prelate died Father Fabre was unanimously chosen to succeed him (5 Dec., 1861) as Superior General of his congregation, in which capacity he from time to time addressed to the members of his congregation, ecyclical letters which have remained models of spiritual direction. He instituted collective retreats for the superiors, and others for the simple religious, and insisted on the observance of charity and humility, with which Bishop Pannom had made the cardinal virtues of his Institute.

He introduced his missionaries into Italy, Spain, and Holland; established new houses in France, Great Britain, and Canada, and, in 1883, canonically erected into a separate province the houses already existing in the United States. Their activities in the missions of Ceylon, South Africa, the extreme North, and the far West, of America, were no less remarkable during his tenure of office.

At the time of his death, when he had been superior for thirty-one years, the roll of members had more than doubled in numbers, and the Oblates counted in their ranks ten bishops who were at the head of as many vicariates Apostolic. If Bishop De Mazenod had found only Tenths of a conscience consolidated (Lyons), the touches to the good work were given by his immediate successor. In addition to being their superior general, Father Fabre was the Director-General of the Association of the Holy Family, a religious institute composed of seven congregations of nuns founded at Bordeaux in the first half of the nineteenth century.

**A. G. Morice.**

**Fabri** (Leffèvre), Honore, Jesuit, theologian, b. about 1607 in the Department of Ain, France; d. at Rome, 8 March, 1688. He entered the Society of Jesus at Avignon, in 1626, and distinguished himself by a life of continuous mental work. He excelled especially in mathematics and physics, but he was also a formidable controversialist. For eight years he taught philosophy and for six years mathematics in the Jesuit college at Lyons, attracting many pupils by the fame of his learning. Called to Rome, he became the chief professor of mathematics at the University of Naples. He was appointed to the Chair of Mathematics at the Vatican Basilica, a position he held for thirty years. His duties did not prevent him from writing a number of learned works on various subjects in keeping with the needs of his time. Sommervogel mentions thirty-one titles of published works in connection with Fabri's name; besides, there are fourteen of his productions in MS., now kept in the Library of Leiden.

The following are the more important of his publications: "Pithanophilius, seu dialogus vel opusculum de opinione probabilii," etc. (Rome, 1659). This work was attacked by Stephanius Gradus, Prefect of the Vatican Library, in his "Disputatio de opinione probabilii" (Rome, 1678; Mecelin, 1679). "Honorati Fabri, Societatis Jesu, apologeticorum in mathematicam mo-

The Cologne edition was considerably enlarged but did not meet with ecclesiastical approbation; it was placed on the Index of forbidden books soon after its appearance. "Una fides unus", was published at Liège and translated into several languages, "seculi tribus libris facilis methodo abstracta" (Dillingen, 1657). "Summula theologica in qua qustiones omnes alienus momenti, que a Scholastici agitari
solent, breviter disculturntur ac definiuntur" (Lyons, 1699). The principles of which this work contains its theological conclusions are far different from those of Aristotle. "Euphendioper sen vir ingeniosus", a little book, which may be useful to the student of literature (Lyons, 1669; Vienna, 1731; Budapest, 1749; Ofen, 1763). Most of Fabri's other works deal with philosophy, mathematics, physics, astronomy, and even zoology. In his treatise on man he claims to have discovered the circulation of the blood, prior to Harvey; but, after investigating this question, Father Bellynk arrives at the conclusion that, at best, Father Fabri may have made the discovery independently of Harvey (cf. Bellynk, Cours de Zoologie, 1864, p. 23).

The relics of St. Romuald were transferred to the church of SS. Biagio and Ronsaldo in 1480. The city was under the jurisdiction of Camerino until 1785, when Pius II re-established the see of Matelica and united it aequo principali
fourth century there appeared in the Orient and in certain countries of the West, bursars (aeconomoi), who, subject to the direction of the bishop, managed the temporal affairs of churches; in other countries the bishop continued to administer the church property with some, at least, of the duties of some ordinaries.

When each church came to have its own particular patronymy, the bishop was naturally obliged to turn over the administration of such property to the local clergy, reserving nevertheless a right of control. During the long Investitures conflict this right, it may be, was completely annihilated; when peace was restored the clergy were often obliged to appeal to the bishop for that help which the clergy could no longer expect from the ordinary administration of the church.

In France and England especially, the assembled parishioners established the portion of expenses that ought to be borne by the community; naturally, therefore, this assembly was henceforth consulted in regard to the most important acts connected with the administration of the parish temporalities. For that purpose it selected lay delegates who participated in the ordinary administration of the ecclesiastical property set aside for parochial uses. They were called vestrymen, churchwardens, procurators (procuratores), mambours (amburnum), luminiers, gagers, provisoires, vitrici, operarii, alliirmanni, etc.

In the councils of the thirteenth century frequent mention is made of laymen, chosen by their fellow laymen, who were in the ecclesiastical administration of temporal affairs; at the same time the rights of the parish priest and of ecclesiastical authority were maintained.

A reaction is visible in the councils of the fourteenth, fifteenth, and sixteenth centuries which undertake to check the tendency towards an exclusively lay administration of the parochial property. Eventually the right of the parish priest to participate in the administration of ecclesiastical property, but demanded that at all times and in all places the lay administrators render an annual account to the bishop or to his delegate. As no general law has determined either the competency or the composition of fabric committees (conseils de fabrique) there has been in this respect very great variations. In modern times secular power has frequently interfered in the administration of ecclesiastical property set apart for purposes of worship, and in the organization of church fabrics. Even now, in most European countries, the State regulates the administration of ecclesiastical property, and the proceedings of church fabrics. (See under BUILDINGS, ECCLESIASTICAL, an outline of the fabric committee.)

A. VAN HOYE.

Fabricius, Andrew. See Lefèvre, Family of.

Fabricius, Hieronymus (surnamed Ab Aquapendente), a distinguished Italian anatomist and surgeon, b. in the little town of Aquapendente (Aqua-Taurina), twelve miles from Orvieto, in 1537; d. at Padua, 21 May, 1619. The name of his birthplace to distinguish him from his contemporary, the great German surgeon, Fabriicus Hildanus. In English medical literature Fabriicus is best known as the teacher of Harvey, who gives him the entire credit for the discovery of the valves in the veins which meant so much for Harvey’s own discovery of the circulation of the blood. Some valves in the veins, however, had been seen and described by investigators before this, probably even by Erasistratus in ancient times. It was Fabriicus’ merit that he recognized the existence of a system of valves.

Sent by his parents to the University of Padua, Fabricius succeeded admirably in Greek, Latin, and philosophy. When he took up medicine he became the favourite pupil of Falloppius, being his demonstrator in anatomy at Padua when scarcely twenty. Though such a young age it was recognized that Fabricius was chosen his successor and a little later became professor of surgery, occupying both chairs for nearly half a century (1562-1609). His abilities were properly appreciated by the Senate of Venice, which built for him at Padua a spacious anatomical theatre bearing his name. He was created a Knight of St. Mark, and his annual salary was a thousand crowns, which was continued for ten years after his resignation. A statue was erected to his memory in Padua after his death. Fabricius was indifferent to money, refused regular fees, and accepted only such presents as wealthy patients forced on him. His work on anatomy (500 fol. pp.) is illustrated by hundreds of figures on sixty-one full-page plates, some of the finest works on human anatomy. A study of the brutes and a study of the comparative anatomy of the appendix are suggestive even for modern readers.

His work on surgery is scarcely less valuable than that on anatomy and has gone through twenty editions in many languages. His principal works are: “De visione, voce, auditu” (Venice, 1600); “De brutorum anatomia” (1600); “De re secto” (Venice, 1600); “De lectionione” (Venice, 1601); “Tractatus anatomicus triplex” (Frankfort, 1614). All his other works were reprinted at Frankfort shortly after this time, and all his works at Leipzig in 1657.

FISHER in Annals of Anatomy and Surgery (Brooklyn, 1880); FOSTER, History of Physiology (London, 1858, 1861); THURING, Famus Hieronymi Fabricii (Padua, 1619); ROMATI, Il maniera anatomica di Fabricius in Le Sperimentazioni (receipt April, 1939); DE RENZI, Storia della Medicina in Italia, Naples, 1857, 1911; JAMES J. WALSH.

Fabyan, Robert, English chronicler, d. 28 Feb., 1513. He was a London clothier, a member of the Guild of St. Mary, and therefore of course a general responsible positions, but resigned his aldermanship in 1502, probably to escape the financial burdens of the mayoralty. Fabyan belongs to the class of City chroniclers, men interested mainly in municipal life, but he is the first to take a wider view and to attempt to combine his London history with that of the country. He was not very successful. His “Concordance of History” begins with Brutus and goes down to the death of Richard III, but his effort to harmonize different chroniclers is made without art or historical judgment. The work is of value mainly for its reference to London. The second edition (1533) contains a number of pithy scattered notes on municipal history under Henry VII. Dr. Busch considers that these notes make a very good digest of the last chronicle of that reign. The best edition of Fabyan is that published by Ellis in 1811.

F. P. URQUHART.

Façade, the face or front of any building. In ecclesiastical architecture the term is generally used to designate the west front; sometimes the transept front. For ritualistic reasons, the church architect was everywhere compelled to treat the end wall of the nave as the grand façade.

EARLY CHRISTIAN PERIOD. The façades of the
churches of the early period were generally built on the model of the old Roman basilicas, and were constructed according to Roman methods, and largely formed of columns and other features taken from Pagan buildings. Their interest is principally from an archaeological point of view. The façades of the early Roman basilicas were exceedingly simple in their upper surfaces. There were but two types; the central gable, following usually the outline of the structure behind it, and the screen façade, usually made to overhang for purposes of protection, and formed by a gradual projection of the courses of brick both forward and sideways. In the more important churches three or more horizontal stages were formed with a mosaic decoration extending from summit to ground, each being St. John Lateran's, St. Peter's, St. Paul's, St. Mary Major's, etc. This converted the façade above the porch into a blaze of colour. Toward the close of the Middle Ages more windows were sometimes opened in the façade. At St. Peter's, in the thirteenth century, beside the wheel window in the gable, there were two rows of three tall millioned windows, the lower row being flanked by two more. The lower part of the façade was always covered by a projecting portico, consisting either of one side of the quadrangular atrium, or of an independent arcade or colonnade. The wall space underneath was usually broken by as many doors as there were aisles to the church, normally three or five. In the minor basilicas there was but a single door, and in exceptional cases, as at St. Peter's, there was a supplementary door for special occasions.

Byzantine façades as a rule were left comparatively plain, partly, no doubt, on account of their location and surroundings. A Byzantine church usually stood apart in a close, and when possible trees were planted about it to mask its foundations, grounds, etc., were generally surrounded with walls. It was entered through a cloistered forecourt or atrium, in the centre of which stood the phiale, or fontain, where the required ablutions were made. Across the lower portion of the front of the church stretched the narthex or vestibule, which sometimes had a porch or portico in front of it. Many churches had in addition to these two a central or esuno-narthex, generally appointed for women. The narthex communicated with the church by means of three doors; that in the centre being large and often richly ornamented. The two others, situated one on each side, were small and not remarkable. The central door was called the Beautiful Gate, sometimes the road of souls.

In the larger churches, above the narthex there was often an enclosed upper gallery for the accommodation of women, called the gynaeconitis. This gallery was enclosed partly by the outside wall or walls and partly by grilles, and was reached by a staircase for the use of women only. From the outside it was lighted by a series of narrow windows, generally covered by round-arched trellis, often, especially in the NeobYZantine style, formed by the interposition of a pillar. As a rule the windows are small and grouped together, or else they are of considerable width, and divided into three lights by columns or by thin strips of unmoulded marble. The lower portion of the windows was often filled with thin slabs of translucent marble, sculptured on the outside, which allowed the light to shine through to a certain extent. Especially in the Neo-Byzantine style, there are occasionally porches, balconies and maichicolations, which give relief to the general flatness. These features are well marked with the grace peculiar to the East. Examples at Constantinople, Sts. Sergius and Bacchus (527–532), and Sancta Sophia (532–537). The church of the Virgin at Misitra and the Catholicon, at Athens (both uncertain, 11th to 13th century), and St. Mark's, Venice (1010–1330). Examples of Italian Byzantine are the cathedrals at Palermo and Cefalu. The present façade of St. Mark's, Venice, is a later casing upon the original Byzantine façade, and stands alone as regards its style, although generally classed as Byzantine. The first appearance of the Byzantine in Italy was the church of San Vitale, at Ravenna. In Russia, the cathedrals of Moscow, Kiev, and Novgorod, are among the best known examples.

Lombardic (sometimes called Lombard Romanesque) façades were the most unfortunate part of Lombard churches. The designing of façades to the basilican plan and section gave much trouble to many different schools of architecture, but by none was it more manifest than by the Lombards. In declining to attach to the church, as the Italians rejected what apparently was the only possible solution. The continuous shape of the gable was used by the Pavians, even in churches where the aisle roofs were much lower than those of the nave. "False" façades, like that of San Michele Maggiore, resulted in designs that obviously belied the basilican section. Even before this, it had been the custom, where the three aisles had been expressed, to raise the walls of the façade much above the actual roof of the church, perhaps with a view to make the church appear externally larger than it really was. This fraud continued to be practised in the churches of Verona, and indeed throughout all Italy, so that it finally became characteristic of Italian church architecture. On the false façades, which were otherwise irrelevant for the most part, was spread with a more or less lavish hand. The façade of S. Ambrogio, Milan, with its great open arches is, perhaps, the most successful one the Lombards ever erected.

Romanesque façades. Their characteristics, as a whole, may be summed up as follows: Buttresses formed of solid stone, or of stone blocks, connected at the top by horizontal mouldings, or by a row of semicircular arches resting on a corbel-table projecting from the wall. Semicircular arches, resting on radially formed capitals, also occur. Door and window openings are very characteristic. The principal, upon which the joints were formed, was in receding planes, or rectangular recesses, known as "orders," in some cases arches were placed over them. All the arches followed the same method, being built in concentric rings. A continuous abacus often occurs over these columns, and the profile of the jamb is carried round the semicircular portion of the arch. The characteristic rose (or wheel) window occurs over the principal doorway of the façade. Mouldings were often purposely carved. The carving and ornaments are derived from the architecture of the ancient Empire, and, in the treatment of the architrave and columns, are in a conventional taste. Local influences were instrumental in producing different local characteristics.

In Central Italian Romanesque, beauty in detail was more sought after than completeness of style. Byzantine influence was strong, especially in Venice, in Florence, and in Pavia. A style of its own, sometimes called Tuscan, San Miniato's, in Florence, is interesting as marking the period of transition, in the eleventh century, from the Basilian to the Romanesque type. In Northern Italian Romanesque, arcades are restricted to the tops of gables. The general character is less refined, owing to the use of stone and brick instead of marble. Details show the breaking away from Classic precedent. In sculpture, hunting and other scenes reflecting the life of the northern invaders are frequent, and in these a grotesque element is prevalent. S. Antonio's, in Piacenza, is an example.

Southern Italian Romanesque shows Byzantine and Mohammedan influence, as instanced in Monreale Cathedral, and the Martorana Church, in Palermo. The detail of these buildings is always refined and graceful, which may be due to some extent to the Greek descent
1. St. Paul's, London
2. The Cathedral, Amiens
3. The Cathedral, Speyer
4. S. Maria in Cosmedin, Rome
of the inhabitants of this part of Italy. Southern French Romanesque is remarkable for its rich decorative façades. Buttresses are generally mere strips, of slight projection, and the façades were arranged in stories, with window lights in pairs or groups. Imposing western entrances are characteristic of this period. The west fronts of the churches of the Charente District, in Aquitania, were elaborately treated with carved ornamental representing foliage or figures of men and animals. On the other hand, the capitals so treated were often continued as a rich, but broad and free Romanesque, bears a strong resemblance to that of North Italy. In the façades the most richly ornamented parts are the doorways and capitals; there is also a wealth of circular and octagonal turrets and arced galleries. Examples: The church of the Apostles, at Cologne, the cathedrals of Worms, Mainz, Trier, and Spire.

Gothic façades.—The first in point of dignity is undoubtedly that of Notre-Dame de Paris; in richness, those of Amiens and Reims. The façade of Amiens, of which only the three lower stories are of the thirteenth century, would doubtless have been the noblest of all Gothic façades, had it been finished according to the original design. The great French Gothic façades are all characterized on the ground that they somewhat disguise the true character of the buildings which enclose; and it is, perhaps, true that an entirely satisfactory design for a western façade was hardly ever realized in a large Gothic church. As a rule, the façade rarely wholly expresses the form of the building which it enclsoes, except in buildings of a very simple character. In the façades of smaller churches where the towers are more independent, at St. Seurin, Toulouse, and Champagne, the whole structural form of the building is expressed as fully as it can. The west fronts of Senlis, Paris, Amiens, and Reims sufficiently illustrate the development and the characteristics of the French Gothic western façade.

In England, the Anglo-Norman western façade was, as a rule, both inappropriate as a terminus to the building, and ill-suited for the Romanesque or independent architectural design. Very few early façades remain. The most important extant fronts of the thirteenth century are those of Lincoln, Salisbury, Wells, and Peterborough. The façade of Lincoln exhibits four different styles of architecture—the work of as many different periods of construction. The portals of English cathedrals are generally rich in decoration, and, of those of Wells are especially so. The façade of Peterborough is entirely unrelated to the building which it encloses. As a rule, the west front in England is devoid of Gothic character; but among exceptions is the western façade of Ripon cathedral. In the early pointed architecture of England, western towers, when they occur, are less imposing than those of the Gothic churches of France.

The western Gothic façades in Germany call for no extended remarks. The façade of the Lorenkirche of Nuremberg, dating probably from the second half of the thirteenth century, exhibits a strange combination of Romanesque and Gothic features. Towards the close of the thirteenth century, in Germany, the work was conceived more as a tentative rather than a true attempt at a new style. Acute open gables over the portals, free-standing mullions and tracery over the face of the wall above, and tall open gallery in front of the openings of the second stories of the towers, are among the new features. Entrances are often north or south, instead of being at the west end. Towers with spires were much used, open-work tracery in the spires is very characteristic. The typical examples of German Gothic are Strasbourg, Freiburg, Ratisbon, Cologne, and Vienna cathedrals.

Italian Gothic façades show the influence of Roman tradition in their classic forms of construction and decoration, which was so great that the verticality which marks the Gothic architecture in the north of Europe does not pervade the Italian examples, to anything like the same extent. From the absence of vertical features, with the flatness of the surface, is the predominating characteristic. There was a general absence of pinnacles. Stone or marble of different colours, carried in systematic band-courses or patterns throughout the design, gives a special character, as at Siena, Orvieto, Verona, etc. A large central circular window was a general feature. Windows are often semicircular-headed, and have the lights with square capitals of Corinthian form, and twisted and inlaid with mosaics known as "cosmatesque".

Spanish Gothic façades exhibit a variety of treatment; but in very few cases is the French form closely followed. The front of the early church of San Pedro de Avila is an entirely logical design of simple character. The façade of Burgos is composed in the French manner. Toledo is a mixture of Gothic and Renaissance, and the west front of Leon dates from the thirteenth century, the later work being characterized by extreme, and even wild, ornamentation. Tracered open-work spires, as in Germany, were favoured, those at Burgos being worthy of attention.

Renaissance façades agree essentially in architectural treatment, growing out of a close contact with ancient monuments, though with variations to them. Examples in Italy: S. Lorenzo and Santo Spirito, in Florence; Santa Maria della Pace, S. Andrea's, The Gesu, S. Peter's, S. John Lateran's, in Rome; S. Maria dei Miracoli, S. Zaccaria and S. Maria della Salute, in Venice; Milan cathedral; and the Certosa of Pavia. French Renaissance: St. Etienne, S. Etienne du Mont, the church of the Sorbonne, the Pantheon and the Madeleine, at Paris. German Renaissance: St. Michael's at Munich and the Frauenkirche at Dresden. Spanish Renaissance: Santo Domingo at Salamanca; the cathedrals of Granada, Valladolid, Santiago, Malaga, and Carmona. English Renaissance: St. Paul's, London.

THOMAS H. POOLE.

Facciolati, Jacopo, lexicographer and philologist, b. at Torreglia, near Padua, Italy, 4 Jan., 1682; d. at Padua, 26 Aug., 1769. He was educated in the seminary at Padua, and later was made professor of logic and regent of the schools in the university of that city, continuing in this position for forty-five years. In 1719 he brought out a revised edition of the "Lexicon Septem Lingurarum", a Latin dictionary in seven languages, called the "Calepinus", from the name of its author, the monk Ambrogio Calepino. In this work Facciolati had been assisted by his pupil, Francesco Fornelli. Their labours on the "Calepinus" convinced them of the need of a totally new Latin lexicon. Therefore, putting aside all other works, they undertook the compilation of a lexicon which should be the most comprehensive vocabulary of the Latin language that had ever been made. For forty years, under the supervision of Facciolati, Fornelli laboured, reading through the entire body of Latin literature and collecting the whole collection of Latin inscriptions, including those on coins and medals. Their great lexicon, which bore the title, "Totius Latinitatis Lexicon", was published in four volumes, at Padua in 1771, after the death of both the editors. This monumental work, upon which all Latin lexicons now in use are based, gives every Latin word, with its Italian and Greek equivalents, and explains all its various meanings. Subsequent editions are the English one of Bailey in two volumes (London, 1828), and that of De Vit (Prato, 1858–57). Facciolati also published a new edition of the "Thesaurus Ciceronianus" of Nizolius. He left a number of letters, remarkable for their elegant Latinity, which were afterwards published. (See FORCELLINI.)

FERRARI, Vita Jacobo Facciolati (Padua, 1799); Gennari, Vita di Jacopo Facciolati (Padua, 1818).

EDMUND BURKE.
Faculties, Canonical (Lat. Facultates).—In law, a faculty is the authority, privilege, or permission, to perform an act or function. In a broad sense, a faculty is a certain power, whether based on one's own right, or received as a favour from another, of validly or lawfully doing some action. In a more restricted sense, it means the conferring on a subordinate, by a superior who enjoys jurisdiction in the external forum, of certain ecclesiastical rights, which he can exercise by common law; to act, namely, in the external or internal forum validly or lawfully, or at least safely. Faculties, then, will be classified, first of all, by reason of the object to which they relate, inasmuch as (1) jurisdiction is granted to absolve from sins and ecclesiastical censures, to dispense in vows, in irregularities relating to the reception of orders or to faculties, to dispense from certain ecclesiastical dispositions; (2) permission or licence is given to do something which would be otherwise forbidden, as the reading of prohibited books, saying two Masses on the same day; ordaining clerics under the prescribed age; (3) to avoid worry and qualms of conscience a precautionary dispensation or permission is granted to proceed in certain cases in relation to which the operation of the law does not appear sufficiently well founded, as for instance, a matrimonial dispensation may be conceded as a precaution, when it is not certain that an impediment exists, or permission to anticipate at 2 p.m. the recitation of the Divine Office is granted to a person who is unwilling to accept the opinion that at that hour is lawful.

Secondly, faculties, by reason of their source, are Apostolic, episcopal, or regular. Faculties are styled Apostolic or papal when they proceed from the pope directly, or through the ordinary channels of the Sacred Roman Congregations. They are episcopal, if the power or privilege conferred proceeds from a diocesan bishop, by virtue of his own apostolic authority, for instance, the faculties of the diocese, to hear confessions, say Mass, preach, etc., granted to priests who labour in the diocese for the salvation of souls. Faculties are regular when they proceed from superiors of the regular clergy by reason of their ordinary jurisdiction, or by virtue of extraordinaries powers or privileges conceded to them by the Holy See. Lastly, faculties are conceded to the ordinary or another regular or secular benefactors, when granted for indeterminate persons, though they may be limited by time; particular, when granted to designated persons or for particular cases. General faculties conceded to bishops and other ordinaries are also called indults.

The distance of dioceses from Rome, together with peculiar local conditions, render the granting of these general faculties a matter of necessity, and in 1637 certain new grants or lists of faculties were drawn up by the Sacred Congregation of the Holy Office, and since then have been communicated by the Holy See, through the Congregation of the Propagation of the Faith, to bishops, vicars and prefects Apostolic throughout the world, according to their various conditions. This has been done for a number of years, e.g. five years (facultates quinquennales), or for a definite number of cases, and ordinary and extraordinary; the former being issued in forms or grants under Roman numerals (Formula I, II, III . . . X), some of the latter under capital letters (Formula A, B, C, etc.), others under small letters (Formula a, b, c), while the final words are: “In audience with His Holiness”. Formula V, VII, VIII, IX are no longer in use. It has been the practice to communicate to the United States grants I, C, D, and E. Of late, however, C, D, and E, with certain modifications, are combined in form T. Favours and privileges are granted likewise by the congregations in keeping with the Constitution “Sancti Consilii” (1908), and are classified consequently in accordance with the Congregation from which they proceed. The authority of the Propagation is not so amply in this matter as formerly, and this too in relation to countries still subject to it. Questions pertaining to the Pauline Privilege fall in every case under the sole competency of the Holy Office, while in matrimonial dispensions, for the portions of the Western Church under its jurisdiction, the Propagation is obliged to confer with the Congregation of the Sacraments (Cong of the Consistory, 7 Jan., 1909). Especially through the Sacred Penitentiary does the pope communicate faculties for the internal forum to bishops and others, including certain confessors, in definite forms or leaflets (pagellae).

Graces thus received from the Holy See do not resist the prerogatives which the one favours may claim, so long as they are not condemned by ordinary or an other title (gratia non vocet gratia). The purpose of the Holy See is to make a concession, not to lessen one's authority. Hence, for example, a bishop is authorized by the Council of Trent to dispense his subjects from the observance of the intervals prescribed in the reception of orders; consequently he is not obliged to observe the condition laid down in Form I, art. xxix, which forbids him to use this faculty in favour of a cleric actually outside the bishop's territory.

While the recent legislation of the Church has sought to prevent conflict of authority between the various Roman Congregations, tribunals and offices, yet it will happen at times that two or more of these bodies will have jurisdiction to the same end, and a petition which has been rejected by one of the congregations may not be presented lawfully to another; a favour granted by another congregation, the previous refusal of the grant being conceded, is null and void. A petition in writing is not required for validity, but is usually exacted; the same may be said of application by telegraph or telephone. A faculty or privilege is valid, as far as requisite data must be expressed. Petitions addressed to the Propagation (the same is true of most of the congregations, at least to expedite matters), should be in Latin, Italian, or French. The Sacred Penitentiary will accept communications in any modern tongue. The suppliance is made out in the name of the petitioners, or of the ordinary. The diocesan chancy office usually deals directly with the rector of the parishes concerned.

Faculties can only be used in favour of members of the Church who are not disqualified by ecclesiastical penalties or censures. Hence in marriage cases where one of the contracting parties is a non-Catholic, the dispensation is given directly to the Catholic and also in Apostolic rescripts absolution from penalties and censures, as far as necessary for the rescript to be effective, is first given. Apostolic faculties granted to a bishop, which imply an act of jurisdiction in using them, can be communicated and applied only to the subjects of the bishop, and to such determinate persons as are called by virtue of the rescript the object of this faculty. Ordinarily faculties may be exercised in behalf of a subject, while both he and the bishop, or other person making the concession, are outside their own territory. When the use of faculties is restricted to the diocese, as in Forms I and C, it means that the subject, not the bishop, must be in the diocese when the indulg is made use of in his behalf. In the United States grants E and H are not conceded to one actually outside his own diocese, if he has not acquired at least a quasi-domicile elsewhere (Holy Office per Propaganda, 20 Dec., 1894). To dispense validly and lawfully by virtue of an indulg, a just cause existing at the time of the dispensation is required. He who possesses general delegated power may apply it to himself, e.g. dispensing himself from fasting. There is an obligation, especially in dispensations, to be measured by the greater or less urgency of the case,
of using faculties possessed. It might be noted that the Apostolic Delegate at Washington, in common
with the bishops of the United States, has possessed
the Propaganda Forms I, C, D, and E, together with
some others, applicable of course throughout the
United States. His Excellency, aside from territorial
extension, possesses no greater powers in regard to
matrimonial dispensations than these diocesan bishops.

A bishop cannot dispense without a special faculty,
when two or more matrimonial impediments, diriment
or otherwise, exist in the same case, or affect the same
persons, though by reason of indults he can dispense
separately in each of the impediments involved. This
restriction, however, holds good only when the impedi-
mants in question are generically different, e. g. con-
sacration, consecration, or valid ordination. A greater
power is given in different indults. The special fac-
ulty covering the cumulation of matrimonial impedi-
mants is usually granted with the renewal of faculties
and is effective during the duration of the same. The
form of this special faculty is not always identical,
greater or more restricted powers being contained
therein. Moreover, a bishop cannot employ this fac-
ulty when he is granting by virtue of an indict a retro-
active dispensation to render a marriage valid (sanati-
ius in radice). This question of cumulation affects
indults only, not absolutas: a dispensation invalid-
ifies a wound on the law, not so an absolute. It
is necessary for validity that the concession of a favour
be made known to the one benefited; and it ought to
be made in a manner that the fact of the grant be
established. As faculties depend upon the will of the
grantor, the terms of the indict must be carefully
studied, and obscure passages rightly interpreted.
In this matter the general rules for the interpretation
of law are to be observed with some additional ones.
Hence in the use of faculties it must be noted whether
power to dispense is granted for matrimonial alliances
already contracted, or not yet contracted, or for both.

A faculty granted for the internal forum only, par-
ticularly if jurisdictional, cannot be used in the external
forum, and vice versa. Faculties are not to be extended
to persons or cases not included in the same. The
existing practice, especially of the Roman Curia (stilus curiae Romanie), will serve as a guide in this matter.

But of the death of the grantor, the re-
moval from office or loss of jurisdiction (certain dis-
positions, however, are to be borne in mind, as below); by
the death of the privileged one; by lapse of time,
when they are granted for a definite period; when they
have been used for the number of cases specified in the
grant; by revocation; by renunciation duly accepted;
by the completion of the business for which one has
received special authorization; by cessation of the
formal cause on which the favour was based. Facul-
ties granted absolutely (not revocable at will) by one
possessing ordinary jurisdiction, and gratiae facies (i.e.,
the delegate is a necessary executor), do not expire at
the death of the grantor; gratiae facundiae (i.e. the dele-
tate is a voluntary executor, viz. commissioned to act,
if he judge it expedient) and faculties granted
with steps have as yet been taken leading to
the concession requested (re aude integre); other-
wise they do not cease. Faculties granted by one
joying delegated power cease at the death of the one
delегating, unless the Holy See expressly provides for
their continuance, or unless the matter in question has
already been begun (re non integr.). The power given
to a delegate of these faculties, expires at the
death, which is not the case if he is chosen by reason
of his dignity or office. When it is stated that faculties
are "revocable at our will or judgment", they ex-
pire with the death of the grantor; when given in the
name of the Holy See, a diocese, etc., they continue in
force after the death of the pope, bishop, etc. In-
dults consequently found in the Propaganda forms or
other general grants as above, since they are gratiae
facies, do not become ineffective at the death of the
pope: the same is true of the faculties conceded by
the Sacred Pontentiaria, when the prefect of that tribunal
loses his jurisdiction through death or other cause.
Jurisdiction granted by a bishop to hear the con-
fusion of an individual cases, re aude integre, when
the bishop dies, is transferred, or resigns: the contrary
is true, when jurisdiction is given to hear confessions
in general. Notwithstanding the revocation of facul-
ties, a case already begun may be completed; and by
a general revocation of faculties special faculties do
not expire. Neglect to use a favour does not destroy
its force, as for example, a person dispensed from fasting
or the recitation of the Holy Office does not lose the
grace, if he meanwhile fast or recite the Office, even for
considerably.

All special faculties granted habitually (habitualiter),
by the Holy See to bishops and others enjoying ordi-
ary jurisdiction within definite territorial limits, re-
main in force notwithstanding the loss of jurisdiction
through death or other cause of the individual to whom
they are granted (Cong. Holy Office, 24 Nov., 1897),
and pass on to his successor, unless in the same
it be expressly stipulated otherwise. Faculties
are considered not personal but real favours, granted
at the ordinary of the diocese or place, and by the or-
dinary are understood bishops, their vicars-general,
vice Apostolic, prelates or prefects Apostolic ruling
over territory not subject to a bishop, vicars capitular
or other legitimate administrators of vacant seces (Cong.
Holy Office, 29 Feb., 1888). It is to be noted that since
the faculties vested in the grantor, the above apportionment
is included the vicar-general of a diocese,
said vicar-general uses these faculties, grants dispensa-
tions and other graces contained therein, by virtue
of authority received directly from Rome, equivalent
to that extended to the bishop himself. The bishop may
forbid the exercise of these powers, but notwithstanding
the prohibition, the vicar-general, with this validity,
were he to use the same faculties, provided nothing else
were wanting to render his action invalid. (See Jur-
risdiction; Delegation; Rescripts; Executor, Apos-

tolic; Dispensation.)

ANDREW B. MEELAH.

Faculties of the Soul.—I. MEANING.—Whatever
dogmatic one may hold concerning the nature of the
human soul and its relations to the organism, the four
following points are beyond the possibility of doubt.
(1) Consciousness is the scene of incessant change; its
processes appear, now in one sequence, now in another;
and, normally, the duration of each is brief. (2) All
do not present the same general features, nor are
they accounted for on one theory. They differ on
account both of their characters as manifested in con-
sciousness, and of the organ, either external or internal,
on which their appearance depends. Yet the features
they have in common under this twofold aspect, together with their differences, make it possible
and necessary to group mental states in certain
me, or at least, each mental state is more
or less the object of consciousness of itself, and
more in the mind than is actually manifested in
consciousness: there are latent images, ideas, and feelings,
which under given conditions emerge and are recog-
nized even after a considerable interval of time. By
reason of their innate or acquired aptitudes, minds differ in capacity or power. Hence, even if it
were possible to use all the faculties of the per-
fectly simple, they would nevertheless differ greatly
because one is capable of experiences incompossible to the other. (4) Notwithstanding their variety and their
intermittent character, these processes belong to one
and the same conscious subject; they are all referred
naturally and spontaneously to the self or me

These facts are the psychological basis for admitting
faculties (from facere, to do), capacities (capax, to
make, or hold), or powers (from posse, to be able;
the Scholastics generally use the corresponding Latin term potentia).

Any attempt, however, to define with greater precision the meaning of faculties, is sure to call forth vigorous protest. In fact, few psychological questions of similar importance have been the object of so many animated discussions, and, it may be added, of so many misunderstandings. One extreme view looks upon faculties as real, though secondary agents, exercising an active influence on one another, and as being scientific explanations of psychological facts. Why does man see and reason? Because he has the faculties of vision and reasoning. The will acts, is free; there is an interaction of the intellect, the will, the senses, the affections, and the appetites. Like all abstractions they should never be looked upon as having any reality outside of the mind, which uses them as logical substitutes to facilitate the classification of mental facts.

That the faculty theory has no essential connexion with Catholic dogma is sufficiently evidenced by the fact that it has been found, and still finds, opponents as well as advocates among Catholic theologians and philosophers.

Judging, therefore, the question on its own merits, it may be said that the doctrine of St. Thomas avoids both extremes mentioned above, and is at least free from the absurdities with which modern psychologists so frequently charge the faculty theory. His expression, "the faculties act only by the energy of the soul," they have no energy of their own, for "they are not the agents." Coming to more special applications, "it is not the intellect that understands, but the soul through the intellect" (Quest. Disp., De Veritate, x, 9, ad 3). Again, the question is not asked whether they are real or unreal passions (Summa, I, Q. lxxiii; I-II, xii; De Veritate, xxiv; De Malo, vi). This shows that when a real distinction is admitted between the soul and its faculties, or between the faculties themselves, the meaning is not that of a distinction between substances or agents. In Scholastic terminology, distinction does not always mean separation nor the possibility of separation. And the distinction between substances and its or realities, attributes or modes, was called a real distinction. If the soul can originate or experience states which, as everybody admits, may be widely different, it is because there are in the mind various modes of energy or faculties. Since minds differ not only by the actual contents of consciousness, but also, and chiefly, by the passions, whether they have or have not experiencing different processes, it is clear that if there exist realities a real difference, it must itself be something real. So unavoidable is this conclusion, that some of the strongest opponents of faculties are at the same time the strongest defenders of the theory of psychological dispositions, which they postulate in order to explain the facts of memory, mental habit, and in general, the utilization, conscious or unconscious, of past experience. And yet, what is a psychological disposition but an acquired power or faculty? Stuart Mill's "background of possibilities" or Taine's "permanent possibility" are certainly less clear and more objectionable than faculties, for the faculty is not a mere possibility, but a real power of an agent, a potentia (see Actus et potentia).

Psychical dispositions are no more explanations of facts than are faculties, if by explanation is meant the assigning of an antecedent belief known than, or known independently of, the facts to be explained. In both cases, the whole knowledge of the faculty, or the disposition, is derived from the processes themselves, for neither can fall under direct observation. The possibility of an experience or action, if known, is always known by direct inference or by analogy from past experience. Yet without being a scientific explanation, and with the same objection for scientific explanations, the faculty, like the disposition, trace, subconscious activity, etc., is a legitimate postulate.

II. Classification.—Plato admits three parts, forms, or powers of the soul, perhaps even three distinct souls: the intellect (Nous), the nobler affections (Phous), and the appetites or passions (Eros, Phrontis, Eum). For Aristotle, the soul is one, but endowed with five groups of faculties (Δυνάμεις): the "vegetative" faculty (ϕυτική), concerned with the maintenance and development of organic life; the appetite (ψυχική), or the tendency to any good; the faculty of sense perception (αισθητική); the "motor" or "moving" faculty (κινητική), which presides over the various bodily movements; and the faculty of reason (νοητική). The Scholastics generally follow Aristotle's classification. For them body and soul are united in one complete substance. The soul is the forma substantialis, the vital principle, the source of all activities. Hence their science of the soul deals with functions which nowadays belong to the provinces of biology and psychology. But they also look upon the soul, especially under the influence of Descartes, the mind has been separated, and even estranged, from the organism. Psychology deals only with the inner world, that is, the world of consciousness and its conditions. The nature of the mind and its relations to the organism are questions that belong to philosophy or metaphysics. As a consequence, also, modern psychology has in some degree distinguished between the soul, i.e., those which the soul exercises itself without the intrinsic co-operation of the organism, and the faculties of the compositum, i.e., the soul and organism united in one complete principle of action, or of one special animated organ. This distinction was also an essential point in the Aristotelian and Scholastic psychology.

Finally, the Scholastics reduced affective life to the general faculty of appetitus, whereas to-day, especially since Kant, a tripartite division is more commonly accepted, namely into cognitive, affective, and conative faculties. Some, however, still hold a bipartite division. Others, finally, reject both as unsatisfactory, and follow the order of development, or base their classification on both objective and subjective aspects of the subject. Without entering into the discussion, it may be said that, however useful and justifiable the tripartite classification may prove in psychology, the Scholastic reduction of feelings to "appetite" seems to be deeper and more philosophical. For feelings and emotions, pleasurable or painful, result from an agreement or conflict between certain experiences and the mind's tendency.

C. A. DURBAY.
Facundus of Hermiane, a sixth-century Christian author, Bishop of Hermiane in Africa, about whose career very little is known. His place in history is due entirely to the spirited and protestat opposition which he offered to the condemnation (by the edict of Justinian dated Jan. 1541) of the "Three Chapters". At the instance of Theodoric Asidas, and with the ostensible purpose of reuniting to the Church the Aëtpaheli, a sect of Monophysites, Justinian was induced to censure the "Three Chapters" (q. v.). By this act certain writings of the fifth-century Theodore of Mopsuestia, Theodoret of Cyrus, and Ibas of Edessa were condemned. Facundus was in Constantinople when this censure was pronounced, and shortly after its publication he and several other western bishops refused to subscribe to the decree, alleging that it was an attack on the Council of Chalcedon, which had accepted at least the letter of Ibas to the Persian Maris. This document was especially aimed at in the decree of the emperor. Facundus also drew up a memorial in protest, which was prevented from presenting by its arrival in Rome of Pope Vigilius. The weak and vacillating conduct of this pontiff and his acquiescence in the condemnation of the "Three Chapters" spurred Facundus to complete this work, which he entitled "Pro Defensione Trium Capitolorum". It is not known when the work was completed nor when it was presented to the emperor, so that nothing can be said of its immediate effect on the controversy. After its publication Facundus was compelled to fly from Constantineople and find safety in concealment. Because of the attitude of Vigilius in acceding to the emperor's insistence that he subscribe to the censure of the "Three Chapters", Facundus and many African bishops cut themselves off from communion with him. This schism continued for many years, and during that time Facundus wrote two other works at the request of his fellow-bishops, in response to reproaches of insubordination ("Libera contra Macioniam Scholasticum") and "Epistola Fidei Catholice in defensione trium capitulorum". The works of Facundus are in P. L., LXVII, 527-578; see Hefele, "History of the Church Councils", tr. by F. W. (1904), II, 203; Barnes, "Pro Defensione Trium Capitolorum", 1. 885; Dibukranzky, "The Works of Facundus, bishop of Hermiane, Pro defensione trium capitulorum", (Moscow, 1880); Davids in Dict. of Christ. Biog., s. v.

Patrick J. Healy.

Faenza, Diocese of (Faventina), in the province of Ravenna (Central Italy), suffragan of Ravenna. The earliest mention of this city is in the report of the victory of Sulla (S. B. C.) over the consul Cnecius Papiurnus Carbo, who was compelled to flee from Italy. In A. D. 728 it was seized by the Lombard king, Liutprand, who later restored it to the exarchate. But the same king again attacked it, while the people were assembled in the church of Santa Maria Foris Portam for the services of Holy Saturday; the bishop himself was among the slain. With the exarchate Faenza passed under the authority of the Holy See. About 1000 it was made a commune and from 1100 was governed by the counts of Modigliana. During the struggle of Frederick Hagnast the popes, the city became involved in the Guelf league; in 1211 the emperor took possession of it after a siege of eight months. During the thirteenth century different families, the Accarisi, the Manfredi, the Lambertazzi, the Nor- digli, and others, disputed the possession of Faenza. From 1294 it was governed by the Manfredi. Several times the Avignon popes had to summon these lords to the papal court, and in 1335 the city was put under the jurisdiction of Cardinal Bertrand Poggetto and in 1356 through Cardinal Gil d'Albornoz. In 1378 the city was destroyed by the famous English condottiere, Sir John Hawkwood. In 1501 Cesar Borgia put to death the Manfredi brothers, Astorgio and Giovanni Evangelista. On the death of Cesar Borgia, Francesco Manfredi, a brother of Astorgio and Evangelista, attempted to return to Faenza, but was compelled to flee by the Venetians. In 1509 Julius II brought the city under the direct rule of the Holy See. During the thirteenth and fourteenth centuries Faenza was renowned for its pottery (whence the French faience). The celebrated physicist, Torricelli, was a native of Faenza. Domitia Lucella, a martyr, the widow of Antoninus Pius, is also said to have been born there. The first historically certain bishop is Constantinus, present at a council in Rome (313), at which St. Saturius was referred to as his predecessor. Another Constantinus was a contemporary of St. Ambrose. Also noteworthy are: Giovanni II, who died in 1109, as a crusader before Acre; the two distinguished theologians, Giovanni del Terma (1155), a Servite, and Pietro Andrea Gambario (1528); Ridolfo Pio of the princes of Carpi (1528), a patron of scholars and himself a learned archaeologist; Giovanni Antonio de Grassi (1560), a professor of Cicero and of Plato's philosophy. A large part of the cathedral was built by Giovanni da Maninno between 1174 and 1386; Bramante also worked there. The body of St. Peter Damian is buried in the cathedral. Faenza has (1908) 114 parishes, 347 secular and 13 regular clergy, 103,962 inhabitants, 2 male and 6 female educational institutions, 6 religious houses of men and 7 of women, and a weekly Catholic paper, Cappellotti, La Chiesa d'Italia, Venice, 1844. 1841; Rogni, Annali della città di Faenza (Faenza, 1840-41); Montarello, Rerum Fascinatorum Scriptores (Venice, 1771).

U. Benigni.

Fagnani, Prospero, canonist, b. in Italy, place and date of birth uncertain; d. in 1678. Some writers place his birth in 1598, others in 1587 or 1588. It is certain that he studied at Perugia. At the age of twenty he was a doctor of civil and canon law; at twenty-two, secretary of the Congregation of the Council. He held this office for fifteen years. He fulfilled the same functions in several other Roman Congregations. It is not certain that he ever lectured on canon law at the Roman University (Sapienza). He became blind at the age of forty-four. This affliction did not prevent him from devoting himself to canonical studies and from writing a commentary on the Decretals of Gregory IX, which gained for him the title of "Doctor Cesari Oeulatissimus", i.e. the blind yet most far-sighted doctor. This commentary includes interpretations of the texts of the most difficult of the Decretals of Gregory IX. It is distinguished by the clearness with which the most complex and disputed questions of canon law are explained. The work is also of great value for the purpose of ascertaining the prac-
tice of the Roman Congregations, especially that of the Congregation of the Council, of which the author quotes numerous decisions. Benedict XIV gave this work the highest praise, and its authority is still continually appealed to in the Roman Congregations. It is divided, like the Decretals of Gregory IX, into five books. The first edition was published at Rome, in 1661, under the title of "Jus canonicum seu commen-
taria absolutissimae a quibus formosissima auctoritas. It has been reprinted several times. Fagnani is re-
proached with excessive rigour in his commentary on the chapter of the Decretals "Ne innotaris" (Book I, De constitutionibus), in which he combats the doctrine of probationism. St. Alphonsus calls him "magnus rigoristarum princeps", the great prince of the rigorists (Homo apostolicus, Tract. I, no. 63; Theologia Moralis, IV, no. 609).

Schulte, Geschichte der Quellen u. Literatur des canonicum Rechts (Stuttgart, 1875-80, III, 485; von Scherer in Kirchen-
lex., IV, 120 sq.)

A. VAN HOVE.

Fagnano, Giulio Carlo de' Toschi di, mathematician, b. at Sinigaglia, Italy, 26 September, 1682; d. there 18 May, 1766. He made his higher studies at the Collegio Clementino in Rome and there won great distinction, except in the one subject which has made him famous. He was first called to teach mathematics, and it was only after his college course that he took up the study of this branch, but then he did so with such earnestness and ability that, without the help of any teacher, he mastered it from its foundations. Most of his important researches were published in the current numbers of the "Giornale de Letterati d'Italia". He is best known on account of his investiga-
tions in the theory of motion of a particle in different curves, especially the lemniscate; this seems also to have been in his own estimation his most important work, since he had the figure of the lemniscate with the inscription: "Multifariam divisa atque dimensa Deo vertatis gloria", engraved on the title-page of his "Produzioni Matematiche", which he published in two volumes (Pescara, 1750), and dedicated to Bene-
diex XIV. The same figure and the words "Deo vertatis gloria" also appear on his tomb, a testimony to the earnest devotion to science and the deeply prac-
tical piety which characterized his entire life; his attachment to the sovereign pontiff was warm and sincere, and of his twelve children one became arch-
dean of the cathedral of Sinigaglia and another a Benedictine nun. As an example of his charity he is praised by his con-
temporary writers for his great mildness in controversy, as well as for his clearness and accuracy of thought and diction.

Colonna, Memorie concorrenti al Marchese Giulio Carlo de' Toschi di Fagnano, published from the Vatican Codex in the Bulletin des Bénédictins (Rome, Jan., 1870, III, with an important note in which are cleared up the discrepancies as to the dates of his birth and division in different curves of his life; Cantor, Vorlesungen über Geschichte der Mathematik (Leipzig, 1898), III, 465-472.

EDWARD C. PHILLIPS.

Faulcon, Etienne-Michel, historian, b. at Tarascon, France, 3 Jan., 1800; d. at Paris, 23 Oct., 1870. He studied at Avignon and Aix (Provence), joined the Sulpicians (1821), and was ordained priest in 1821. While director of "La Solitude", he wrote several ascetic and biographical works and collected materials for future publications. In 1848, during an official visitation in Montreal, he conceived the plan of "Les établissements du diocèse de Montréal". This work consisted of twelve intended volumes of this work, destined to em-
brace the entire French domination (1534-1759), only three were published, the narrative closing with the year 1875. Two subsequent voyages to Canada en-
abled him to write several important biographies, those of Sister Marguerite Bourgeoys, of Jeanne Mance (with the history of the Hôtel-Dieu, Villerarie), of Mother d'Youville, and of Jeanne Le Ber. His chief works relating to Old France are his life of Monsieur Olier and "Monuments inédits sur l'apostolat de Sainte Marie-Madeleine en Provence". He has been repeatedly criticized for his partiality towards his society and towards Montreal. Most historians censure his appreciation of Bishop Laval and of the Jesuits. On the other hand, he is credited for giving prominence to persons and events of Villerarie, less clearly treated by the Jesuit "Relations" and later histories.

Bertrand, Histoire littérale de la Compagnie de Saint-Sulpice (Paris, 1900); Rochemont, Les Jesuites et la Nouvelle-
France (Paris, 1898); Morosan, Bibliotheca Congregationis (Ottawa, 1897); J. M. Lemoine in Frons. of Royal Soc. of Canada (1882).

LIONEL LINDSAY.

Fath (πάθος, passion, fiden).

I. THE MEANING OF THE WORD. In the Old Testament, πάθος means essentially steadfastness, cf. Exod., xvii, 12, where it is used to describe the strengthening of Moses’ hands; hence it comes to mean faithfulness, whether of God towards man (Deut., xxxii, 4) or of man towards God (Ps. xxviii, 30). As signifying man’s attitude towards God, it means trustfulness or fiducia. It would, however, be illogical to conclude that the word cannot, and does not, mean “belief” or “faith” in the Old Testament, for it is clear that we cannot put trust in a person’s promises without previously assenting to or believing in that person’s claim to such confidence. Hence, if it could be proved that the πάθος does not in itself contain the notion of belief, it must neces-
sarily presuppose it. But that the word does itself contain the notion of belief is clear from the use of the radical πάθος, which in the causative conjugation, or Hiph’iil, means “to believe”, e. g. Gen., xv, 6, and Deut., i, 32, in which latter passage the two meanings —viz. of believing and of trusting—are combined. That the noun itself often means “faith” or “belief”, is clear from Euphrates (Helene, 710), ἡ αἰσθήσις πάθος τοῦ πάθος and that πάθος could mean “belief” is shown by the same Homer, οὗ πάθος ἔστη ρέων ἐν τῇ ἑλένῃ (Medea, 414; cf. Hipp., 1007). In the New Testa-
ment the meanings “to believe” and “belief”, for πίστις and πάθος, come to the fore; in Christ’s speech, πάθος frequently means “trust”, but also “belief” (cf. Matt., viii, 10). In Acts it is used object-
ively of the tenets of the Christians, but is often to be rendered “belief” (cf. xvii, 31; xx, 21; xxvi, 18). In Romans, iv, 15, the meaning of “con-
science”—“all that is not of faith is sin”—but the Apostle repeatedly uses it in the sense of “belief” (cf. Rom., iv, and Gal., iii). How necessary it is to point this out will be evident to all who are familiar with mod-
ern theological literature; thus, when a writer in the Hibbert Journal”, Oct., 1907, says, “From one end of Scripture to the other, faith is trust and only trust”, it is hard to see how he has avoided simply the Greek ἐπίθεσις, of Heb., xiii, 1, and Heb., xi, 1. The truth is that many theological writers of the present day are given to very loose thinking, and in nothing is this so evident as in their treatment of faith. In the article just referred to we read: “Trust in God is faith, faith is belief, belief may mean creed, but creed is not equivalent to trust in God.” A similar vagueness was plain in Whatmore’s “Do we believe?” controversy; one correspondent says: “We unbelievers, if we have lost faith, cling more closely to hope and—the greatest of these—charity” (“Do we believe?,” p. 180, ed. W. L. Courtney, 1903). Non-Catholic writers have repudi-
ated all idea of faith as an intellectual assent, and con-
sequently they fail to realize that faith must necessar-
FAITH 753

ily result in a body of dogmatic beliefs. "How and by what influence", asks Hamack, "was the living faith thus translated and creased, thus we render to Christ into a philosophical Christology?" (quoted in Hibbert Journal, loc. cit.).

II. FAITH MAY BE CONSIDERED BOTH OBJECTIVELY AND SUBJECTIVELY.—Objectively, it stands for the sum of truths revealed by God in Scripture and tradition, and which the Church (see Faith, Rule of) presents to the intellect in a brief form in her creed; subjectively, faith stands for the faculty of the individual human heart which is capable of accepting, assimilating and loving those truths. It is with this subjective aspect of faith that we are here primarily concerned. Before we proceed to analyze the term faith, certain preliminary notions must be made clear.

(a) The twofold order of knowledge.—"The Catholic Church", says the Vatican Council, III, iv., has always held that there is a twofold order of knowledge, and that these two orders are distinguished from one another not only in their principle but in their object; in one we know by natural reason, in the other by Divine faith; the object of the one is truth attainable by natural reason, the object of the other is mysteries hidden in God, but which we have to believe and which can only be known to us by Divine revelation.

(b) There is a distinction between the knowledge of the intelligible object and the intelligible object itself. A general way as the union between the intellect and an intelligible object. But a truth is intelligible to us only in so far as it is evident to us, and evidence is of different kinds; hence, according to the varying character of the evidence, we shall have varying kinds of knowledge. Thus a truth may be self-evident—e. g., the whole is greater than its part—in which case we have to have intuitive knowledge of it; or the truth may not be self-evident, but deducible from premises in which it is contained—such knowledge is termed reason knowledge; or again a truth may be neither self-evident nor deducible from premises in which it is contained, yet the intellect may be obliged to assent to it because it would else have to reject some other universally accepted truth; lastly, the intellect may be induced to assent to a truth for none of the foregoing reasons, but solely because, though not evident in itself, this truth rests on grave authority—for example, we accept the statement that the sun is 90,000,000,000 miles distant from the earth because competent, veracious authorities vouch for the fact.

(c) Therefore, what is not self-evident and is not necessarily proved by argument; or the arguments on one side may preponderate; though not to the exclusion of those on the other side; in this case we have not complete adhesion of the intellect to the truth in question, but only opinion. Lasty, the arguments or authorities brought forward may be so convincing that the mind gives its unquestioned assent to the statement proposed and has no fear whatever lest it should not be true; this state of mind is termed certitude, and is the perfection of knowledge. Divine faith, then, is that form of knowledge which is derived from Divine authority, and which consequentely begets absolute certitude in the mind of the recipient.

(d) That such Divine faith is necessary, follows from the fact of Divine revelation. For revelation means that the Supreme Truth has spoken to man and required of us an act of faith which are not in themselves evident to the human mind. We must, then, either reject revelation altogether, or accept it by faith; that is, we must submit our intellect to truths which we cannot understand, but which come to us on Divine authority.

(e) We shall arrive at a better understanding of the habit or virtue of faith if we have previously analyzed that virtue by examining an act of ocular vision and an act of reasoned knowledge. In ocular vision we distinguish three things: the eye, or visual faculty, the coloured object, and the light which serves as the medium between the eye and the object. It is usual to term colour the formal object (objectum formale quo) of vision, since it is that which precisely and alone makes that thing the object of vision; the individual object seen may be termed the material object, e. g. this apple, that man, etc. Similarly, the light which serves as the medium between the eye and the object is termed the formal reason (objectum formale quo) of our actual vision. In the same way, when we analyse an act of intellectual assent to any given truth, we must distinguish the object of the intellect as the term of the intelligible object towards which the intellect is directed, and the evidence whether intrinsic to that object or extrinsic to it, which moves us to assent to it. None of these factors can be omitted, each operates in bringing about the act, whether of ocular vision or of intellectual assent.

(f) Hence, for an act of faith we shall need a faculty capable of enabling us to act on an object commensurate with that faculty, and evidence—not intrinsic but extrinsic to that object—which shall serve as the link between faculty and object. We will commence our analysis with the object:

III. ANALYSIS OF THE OBJECT OR TERM IN AN ACT OF DIVINE FAITH.—(a) For a truth to be the object of an act of Divine faith, it must be itself Divine, and this not merely as coming from God, but as being itself concerned with God. Just as in ocular vision the formal object must necessarily be something coloured, so in Divine faith the formal object must be something Divine—in theological language, the objectum formale quo of Divine faith is the First Truth in Being, Prima Veritas in essendo—we could not make an act of Divine faith upon an object of human making, without both God and faith being there. In this sense, we may say that it is the condition of the divine act, and this is the reason why we must regard the will as the subject of the divine act. In this sense, the object of the divine act is the First Truth, and we may say that it is the act of the divine will to consider the object of the divine act as the First Truth. But the object of the divine act is the First Truth, and this object is the object of the divine act. Consequently, we may say that it is the object of the divine act to consider the object of the divine act as the First Truth.

(b) Again, the evidence upon which we assent to this Divine truth must also be itself Divine, and there must be as close a relation between that truth and the evidence upon which it comes to us as there is between the coloured object and the light; the former is a necessary condition for the exercise of our visual faculty, the latter is the cause of our actual vision. But no one but God can reveal God; in other words, God is His own evidence. Hence, just as the formal object of Divine faith is the First Truth Itself, so the evidence of that First Truth is the First Truth declaring Itself. To use scholastic language once more, the objectum formale quo, or the motive, or the evidence, of Divine faith is the Prima Veritas in dicendo.

(c) The propositions concerning the correspondence of the same truth can be an object both of faith and of knowledge. In other words, can we believe a thing both because we are told it on good authority and because we ourselves perceive it to be true? St. Thomas, Scotus, and others hold that once a thing is seen to be true, the adhesion of the mind is in no wise strengthened by the authority of one who states that it is so; but the majority of theologians maintain, with De Lagon, that there may be a knowledge which does not entirely satisfy the mind, and that authority may then find a place, to complete its satisfaction. —We may note here the absurd expression Credo quia impossibile, which has provoked many sneers. It is not an axiom of the Scholastics, as was
stated in the "Revue de Métaphysique et de Morale" (March, 1896, p. 169), and as was suggested more than once in the "Do we believe?" correspondence. The expression is due to Tertullian, whose exact words are: "Natus est Dei Filius; non pudet, quia pudendum est; et mortuus est Dei Filius; prorsus credibile est, quia ineptum est; et sepultus, resurrexit; certum est, quia impossibile" (De Carne Christi, cap. v). This treatise dates from Tertullian's Montanist days, when he was carried away by his love of paradox. At the same time it is clear that the writer only aims at bringing out the wisdom of God manifested in the humiliation of the Cross; he is perhaps paraphrasing St. Paul's words in I Cor., 1, 25.

Let us now make some concrete act of faith, e.g.,

"I believe in the Most Holy Trinity." This mystery is the material or individual object upon which we are now exercising our faith, the formal object is its character as being a Divine truth, and this truth is clearly inevident as far as we are concerned; it in no way appeals to our intellect, on the contrary it rather repels it. And yet we assent to it by faith, consequently upon evidence which is intrinsic and is intrinsic to the truth we are accepting. But there can be no evidence commensurate with such a mystery; save the Divine testimony itself, and this constitutes the motive for our assent to the mystery, and is, in scholastic language, the *objectum formale quo* of our assent. If, then, we are asked why we believe with Divine faith any hypostatic truth, we say, "We believe because God has revealed it.

We may point out in this connexion the falsity of the prevalent notion that faith is blind. "We believe!" says the Vatican Council (III, ii), "that revelation is true, not indeed because the intrinsic truth of the mysteries is clearly seen by the natural light of reason, but because of the authority of God. Whence it is clear that the doctrine of faith is not to be deceived." Thus, to return to the act of faith which we make in the Holy Trinity, we may formulate it in syllogistic fashion thus: Whatever God reveals is true; but God has revealed the mystery of the Holy Trinity; therefore this mystery is true. The major premise is indubitable and intrinsically evident; the minor premise is evidently revealed to us by the Church and by the Church (cf. *Faith, Rule of*, and also because, as the Vatican Council says, "in addition to the internal assistance of His Holy Spirit, it has pleased God to give us certain external proofs of His revelation, viz. certain Divine facts, especially miracles and prophecies, for since these latter clearly manifest God's omnipotence and infinite knowledge, they afford the best proofs of the truth of His teaching, and should be the means of applying to all men the fruits of the redemption He had wrought." When we come to the subsequent history of this Church we find it speedily spreading everywhere, and this in spite of its humble origin, its worldly teaching, and the cruel persecution which it meets at the hands of the rulers of this world. And as the centuries pass we find this Church battling against heresies, schisms, and the sins of her own people—nay, of her own rulers—and yet continuing ever the same, promulgating ever the same doctrine, and putting before men the same mysteries of the life, death, and resurrection of the world's Saviour, Who had, so she taught, gone before to prepare a home for those who while on earth should have believed in Him and followed the way of Grace. But the history of the Church since New Testament times thus wonderfully confirms the New Testament itself, and if the New Testament so marvellously completes the Old Testament, these books must really contain what they claim to contain, viz. Divine revelation. And more than all, that Person Whose life and death were so marvelously foretold in the Old Testament, as told in the New Testament, so perfectly corresponds with its prophetic delineation in the Old Testament, must be what He claimed to be, viz. the Son of God. His work, therefore, must be Divine. The Church which He founded must also be Divine and the repository and guardian of His teaching. Indeed, we can truly say that for every truth of Christian dogma the Church, which believes in the Divinity of the Word of God by the testimony of the Church, and we believe in Him because the Divinity He claimed rests upon the concurrent testimony of His miracles, His prophecies. His personal character, the nature of His doctrine, the marvellous propagation of His teaching in spite of its running counter to flesh and blood, the united testimony of thousands of martyrs, the stories of Christ's saints who for His sake have led heroic lives, the history of the Church herself since the Crucifixion, and, perhaps more remarkable than
any, the history of the papacy from St. Peter to Pius X.

(c) These testimonies are unanimous; they all point in the same direction, they are of every age, they are clear and simple, and are within the grasp of the humblest intelligence. And, as the Vatican Council has said, "the Church herself, is, by her marvellous propagation, her wondrous sanctity, her inexhaustible fruitfulness in good works, her Catholic unity, and her enduring stability, a great and perpetual motive of credibility and an irrefragable witness to her Divine commission." (Const. "Dei Filius") of the Apostles", says St. Augustine, "saw the Head and beheld the Body; we see the Body, let us believe in the Head!" (Sermon cxliii, 8 (al. cxliii), de temp., P. L., V, 1143). Every believer will echo the words of Richard of St. Victor, "Lord, if we are in error, by Thine own self we have been deceived; for these things have been confirmed by such signs and wonders in our midst as could only have been done by Thee!" (de Trinitate, I, cap. ii).

(d) But much misunderstanding exists regarding the meaning and office of the motives of credibility. In the first place, they afford us definite and certain knowledge of Divine revelation; but this knowledge precedes faith; it is not the final motive for our assent to the truths of faith; as St. Thomas says, "Faith has the character of a virtue, not because of the things it believes, but rather because of the person who believes, for it adheres to the testimony of one whom truth is infallibly found!" (De Veritate, xiv, 8); this knowledge of revealed truth which precedes faith can only beget human faith, it is not even the cause of Divine faith (cf. Suarez, De Fide, disp. iii, 12), but is rather to be considered a remote disposition to it. We may insist upon this because in the mind of many faith is regarded as a more or less necessary consequence of a careful study of the motives of credibility, a view which the Vatican Council condemns expressly: "If anyone says that the assent of Christian faith is not free, but that it necessarily follows from the arguments which human reason can furnish in its favour; or if anyone says that God's grace is only necessary for that living faith which worketh through charity, let him be anathema!" (Sess. IV). Nor can the motives of credibility make the mysteries of faith clear in themselves, for, as St. Thomas says, "the arguments which induce us to believe, e. g. miracles, do not prove the faith itself, but only the truthfulness of him who declares it to us, and consequently they do not beget knowledge of faith's mysteries, because only faith" (in loc.); on the contrary, this is the second (2, 2, 13, 4th). On the other hand, we must not minimize the real propositive force of the motives of credibility within their true sphere; "Reason declares that from the very outset the Gospel teaching was rendered conspicuous by signs and wonders which gave, as it were, definite proof of a definite truth" (Leo XIII, "Eterni Patris").

(e) The Church has twain condemned the view that faith ultimately rests on an accumulation of probabilities. Thus the proposition, "The assent of supernatural faith . . . is consistent with merely probable knowledge of revelation", was condemned by Innocent XI in 1670 (cf. Denzinger, Enchiridion, 10th ed., no. 1171); and the Syllabus "Lamentabili sane" (July, 1907) condemns the proposition outright (No. XXXV) that the assent of supernatural faith is based on an accumulation of probabilities. But since the great name of Newman has been dragged into the controversy regarding this last proposition, we may point out that, in the "Grammar of Assent" (chap. x, sect. 2), Newman refers solely to the proof of faith afforded by the motives of credibility, and he rightly concludes that, since these are inherent in faith itself, they are termed "an accumulation of probabilities". But it would be absurd to say that Newman therefore based the final assent of faith on this accumulation; as a matter of fact he is not here making an analysis of an act of faith, but only of the grounds for faith; the question of authority does not come into his argument (cf. McNabb, "Oxford Conferences on Faith", pp. 121-122).

V. AN ANALYSIS OF THE ACT OF FAITH FROM THE SUBJECTIVE STANDPOINT.—(a) The light of faith.—An angel understands truths which are beyond man's comprehension; if then a man were called upon to assent to a truth beyond the ken of the human intellect, but within the grasp of the angelic intellect, he would require for the time being something more than his natural light of reason, he would require what we may call the angelic light, the light given to the angel's intellect. But if a man were called upon to assent to a truth beyond the grasp of both men and angels, he would clearly need a still higher light, and this light we term "the light of faith"—a light, because it enables him to assent to those supernatural truths, and the light of faith because it does not so illumine those truths as to make them no longer obscure, for faith must ever be "the substance of things to be hoped for, the evidence of things that appear not" (Heb., xi, 1). Hence St. Thomas ("De Veritate", xiv, 9, ad 2bis) says: "Although the Divinely infused light of faith is more powerful than the natural light of reason, nevertheless in our present state we only imperfectly participate in it; and hence it comes to pass that it does not beget in us real vision of things which, in its absence, are for us such vision belongs to our eternal home, where we shall perfectly participate in that light, where, in fine, 'in God's light we shall see light' (Ps. xxxv, 10).

(b) The necessity of such light is evident from what has been said, for faith is essentially an act of assent, and just as assent to a series of deductive or inductive reasoning, or a series of facts, if they are to be impossible without the light of reason, so, too, assent to a supernatural truth would be inconceivable without a supernatural strengthening of the natural light: "Quid est enim fides nisi credere quod non vides?" (i. e. what is faith but belief in that which thou seest not?) asks St. Augustine; but he also says: "Faith has its eyes by which it in some sort sees that to be true which it does not yet see; and by which, too, it most surely sees that it does not see what it believes" [Ep. ad Consent., ep. cxxx 8 (al. cxxxii), P. L., II, 456].

(c) Again, it is evident that this "light of faith" is a supernatural gift and is not the necessary outcome of assent to the motives of credibility. No amount of study will with no other resource beget faith for a lifetime of faith would be impossible without the light of reason, so, too, assent to a supernatural truth would be inconceivable without a supernatural strengthening of the natural light; "Quid est enim fides nisi credere quod non vides?" (i.e. what is faith but belief in that which thou seest not?) asks St. Augustine; but he also says: "Faith has its eyes by which it in some sort sees that to be true which it does not yet see; and by which, too, it most surely sees that it does not see what it believes" [Ep. ad Consent., ep. cxxx 8 (al. cxxxii), P. L., II, 456].

(d) The place of the will in an act of faith.—So far we have seen that faith is an act of the intellect assenting to a truth which is beyond its grasp, e. g. the mystery of the Holy Trinity. But to many it will seem impossible as faith is an act of assent to a proposition which is not intrinsically evident as it would be to ask the eye to see a sound. It is clear, however, that the intellect can be moved by the will either to study or not to study a certain truth, though if the
truth be a self-evident one, e. g., that the whole is
greater than its part—the will cannot affect the intel-
lect. Moreover, our own knowledge is often made de-
pendent on a mere possibility of something else, and thus distract it from the con-
templation of that particular truth. If, now, the will
moves the intellect to consider some debatable point—
e. g. the Copernican and Ptolemaic theories of the rel-
ationship between the sun and the earth—it is clear
that the intellect can only assent to one of these views
in proportion as it is convinced that the particular
view is true. But neither view has, as far as we can
know, more than probable truth, hence of itself the
intellect can only give in its partial adherence to one
of these views, it must always be precluded from ab-
solute assent by the possibility that the other view
may be right. The fact that men hold much more
tenaciously to one of these than the arguments war-
rant can only be due to some extrinsic consideration,
e. g. that it is absurd not to hold what the vast major-
ity of men hold. And here it should be noted that, as
St. Thomas says repeatedly, the intellect only assents
to a statement for one of two reasons: either because
that statement is immediately or mediately evident in
itself—e. g. a first principle or a conclusion from
propositions which are immediate or mediately evid-
ent—in which case the intellect does not need to be
intrinsic evidence of course comes into play when in-
trinsic evidence is wanting, but though it would be
absurd, without weighty evidence in its support, to
assent to a truth which we do not grasp, yet no amount
of such evidence can make us assent, it could only show
that the statement in question was credible, our
ultimate actual assent could only be due to the in-
trinsic evidence of the object—since the statement is
offering no new evidence, or failing that, due to the will.
Hence it is that St. Thomas repeatedly defines the act
of faith as the assent of the intellect determined by the will (De Veritate, xiv, 1;
II-II, Q. ii, a. 1, ad 3\textsuperscript{em}; c. ibid., iv, 1, c., and ad 2\textsuperscript{em}).
The reason, then, why men cling to certain beliefs more
tenaciously than the arguments in their favour would
warrant, is to be sought in the will rather than in the in-
trinsic evidence: since the statement is true on both sides,
the intrinsic evidence is not convincing, but some-
thing is to be gained by assenting to one view rather
than the other, and this appeals to the will, which
therefore determines the intellect to assent to the
view which promises the most. Similarly, in Divine
faith the credentials of the authority which tells us
that the will moves by faith, that is, that to assent
they are always extrinsic to the proposition, “God has
revealed this or that”, and consequently they cannot
compel our assent; they merely show us that this
statement is credible. When, then, we ask whether
we are to give in our free assent to any particular
statement or not, we feel that in the first place we can-
not do so unless there be strong extrinsic evidence in
its favour, for to believe a thing merely because we
wished to do so would be absurd. Secondly, the
proposition itself does not compel our assent, since it is
not intrinsically evident, but there remains the fact
that only on condition of our assent to it shall we have
what the human soul naturally yearns for, viz., the
possession of God, Who is, as both reason and author-
ity declare, the end that man was made for, e. g., the
baptized, shall be saved\textsuperscript{1}, and “Without faith it is
impossible to please God.” St. Thomas expresses
this by saying: “The disposition of a believer is that
of one who accepts another’s word for some statement,
because it seems fitting or useful to do so. In
the same way we believe Divine revelation because the
reward of eternal life is promised us for so doing.
It is the will which is moved by the prospect of this re-
ward to assent to what is said, even though the intel-
lect is not moved by something which it understands.
Hence St. Augustine says (Tract. xxvi in Joannem,
2): ‘Cetera potest homo nolens, credere nonnisi vo-
len\’ [i. e. other things a man can do against his will,
but to believe he must will]” (De Ver., xiv, 1).
(c) But just as the intellect needed a new and special
light in order to ascertain the supernatural truths of
faith, so also the will needs a new and special light in
order that it may tend to that supernatural good
which is eternal life. The light of faith, then, illu-
mines the understanding, though the truth still re-
mains obscure, since it is beyond the intellect’s grasp;
but supernatural grace moves the will, which, having
now a supernatural good put before it, moves the in-
tellect to assist it to the truth. Hence it is that faith is
described as “bringing into captivity every understanding unto the obedience of
Christ” (II Cor., x, 5).
VI. DEFINITION OF FAITH.—The foregoing analyses
will enable us to define an act of Divine supernatural
faith as “the act of the intellect assenting to a Divine
truth owing to the movement of the will, which is itself
moved by the grace of God” (St. Thomas, II-II,
iv, a. 2). And just as the light of faith is a gift super-
naturally bestowed upon the understanding, so also
this Divine grace moving the will is, as its name im-
pies, an equally supernatural and an absolutely
gratuitous gift. Neither gift is due to previous study,
neither of them can be acquired by human efforts, but
is granted us gratuitously.
From all that has been said two most important
corollaries follow: (a) That temptations against faith
are natural and inevitable and are in no sense con-
trary to faith, “since”, says St. Thomas, “the assent
of the intellect in faith is due to the will, and since the
object to which the intellect thus assents is not its own
proper object—for that is actual vision of an intelligi-
bly divine grace or charity, and the latter is a gift—
towards that object is not one of tranquillity, on the
contrary it thinks and inquires about those things it
believes, all the while that it assents to them unhesi-
tatingly; for as far as it itself is concerned the intellect
is not satisfied” (De Ver., xiv, 1). (b) It also follows
from the above that an act of supernatural faith is
meritorious, since it proceeds from the will moved by
divine grace or charity, and that has all the essential
constituents of a meritorious act (cf. II-II, Q. ii, a. 9).
This enables us to understand St. James’s words when
he says, “The devils also believe and tremble” (i, 19).
“IT is not willingly that they assent”, says St. Thomas,
“but they are compelled thereto by the evidence of
those signs which prove that what believers assent to is
true, even if they are not aware of the intrinsic
proofs, not to say of the truths of faith so evident as to
afford what is termed vision of them” (De Ver., xiv, 9, ad 4\textsuperscript{em}); nor is their faith
Divine, but merely philosophical and natural. Some
may fancy the foregoing analyses superfluous, and
may think that they savour too much of Scholasticism.
But if anyone will be at the pains to compare the
teaching of the Fathers, of the Scholastics, and of the
divines of the Anglican Church in the seventeenth and
eighteenth centuries, with that of the non-Catholic
theologians of to-day, he will find that the Scholastics
merely put into shape what the Fathers taught, and
that the great English divines owe their solidity and
genuineness worth to their vast patristic knowledge and
their strictly logical training.
I do not believe that Bishop Butler’s “Analogy of
Religion”, chaps. v, vi, with the paper on “Faith”
contributed to “Lux Mundi”. The writer of this latter paper tells us that
“faith is an elemental energy of the soul”,” a tenta-
tive probation”, that “its primary note will be trust”,
and finally that “in response to the demand for defi-
nition, it can only reiterate: Faith is faith.
Believing is just believing.” Nowhere is there any
analysis of terms, nowhere any distinction between the
relative parts played by the intellect and the will;
and we feel that those who read the paper must have
risen from its perusal with the feeling that they had
been wandering through—we use the writer’s own
expression—“a juggling maze of words”.

VII. THE HABIT OF FAITH AND THE LIFE OF FAITH.

(a) We have defined the act of faith as the assent of the intellect to a truth which is beyond its comprehension, but which it accepts under the influence of the will moved by grace; and from the analysis we are now in a position to define the virtue of faith as a supernatural habit by which we firmly believe those things to be true which God has revealed. Now every virtue is the perfection of some faculty, but faith results from the combined action of two faculties, viz., the intellect which elicits the act, and the will which moves the intellect to do so; consequently, the perfection of faith will depend upon the perfection with which each of these faculties performs its allotted task, so that he who is truly virtuous in this will must promptly and readily move it to do so.

(b) The unhesitating assent of the intellect cannot be due to intellectual conviction of the reasonableness of faith, whether we regard the grounds on which it rests or the actual truths we believe, for “faith is the evidence of things that appear not”; it must, then, be referred to the fact that these truths come to us on Divine infallible testimony. And though faith is essentially of “the unseen” it may be that the peculiar function of the light of faith, which we have seen to be so necessary, is in some sort to afford us, not indeed vision, but an instinctive appreciation of the truths which are declared to be revealed. St. Thomas seems to hint at this when he says: “As by other virtues we are made intellectually virtuous in the exercise of its, so by the habit of faith a man’s mind is inclined to assent to those things which belong to the true faith and not to other things” (II-II, q. iv, a. 3sq).

In every act of faith this unhesitating assent of the intellect is due to the motion of the will as its efficient cause, and the same must be said of the theological virtue of faith which is the perfect act of faith. As St. Thomas insists (I-II, q. iv, 3), there is no virtue, properly so called, in the intellect except so far as it is subject to the will. Thus the habitual premiss of the will in moving the intellect to assent to the truths of faith is not only the efficient cause of the intellect’s assent, but is precisely what gives to this assent its virtuous, and consequent to the truths of faith as its end. The act of faith can only come from its unsWaying tendency to the Supreme Good. And at the risk of repetition we must again draw attention to the distinction between faith as a purely intellectual habit, which as such is dry and barren, and faith resident, indeed, in the intellect, but motivated by charity or love of God. Who is our beginning, our ultimate end, and our guide in the way of our life; it is this latter which St. Thomas insists (I-II, q. iv, 4 sqq.) that the intellect must be to the heart of the good the habitus of faith. “One aspect of love which God has decreed to us?” says St. Augustine, “proceeds from true love” (de Civ. Dei, XIV, 1x), and, as he elsewhere beautifully expresses it, “Quid est ergo credere in Eum? Credendo amare, credendo diligere, credendo in Eum ire, et Ejus membris incorporari.” Ipsa est ergo fides quam de nobis Deus exigit; et non invent quod exigat, sed quod ille quod exigit, in persona Dei, in Jesum Christum, in Jnnonem, 6. ”What, then, is to believe in God? It is to love Him by believing, to go to Him by believing, and to be incorporated in His members. “This then, is the faith which God demands of us; and He finds not what He may demand except where He has given what He may find.” This then is what is meant by “living faith,” that is, the act which has regard to the person of Christ by faith, “informed” by charity, or love of God. If we regard faith precisely as an assent elicited by the intellect, then this bare faith is the same habit numerically as when the informing principle of charity is added to it, but it has not the true character of a moral virtue and is not a source of merit. If, then, charity be dead—if, in other words, a man be in mortal sin and so out the habitual sanctifying grace of God, which alone gives to his will that due tendency to God as his supernatural end which is requisite for super-

natural and meritorious acts—it is evident that there is no longer in the will that power by which it can, from supernatural motives, move the intellect to assent to supernatural truths. The intellectual and Divinely infused habit of faith remains, however, and when charity returns this habit acquires anew the character of “living” and meritorious faith. (c) Again, faith being a virtue, it follows that a man’s promptitude in believing will make him love the truths he believes, and he will therefore study them, not indeed in the spirit of doubting inquiry, but in order the better to grasp them as far as human reason will allow. Such inquiry will be meritorious and will render his faith more robust, because, at the same time, it will make him face the intellectual difficulties which are involved, he will necessarily exercise his faith and repeatedly “bring his intellect into submission”. Thus St. Augustine says, “What can be the reward of faith, what can its very name mean, if you wish to see now what you believe? You ought not to see in order to believe, you ought to believe in order to see; you ought to believe so long as you do not see, lest we be led to believe not.” (rev. in. xviii, 2, P. L., V, 236). And it is in this sense we must understand his oft-repeated words: “Crede ut intelligas” (Believe that you may understand). Thus, commenting on the Septuagint version of Isaías, vii, 9, which reads: “nisi credideritis non intelligetis”, he says: “Proficio ergo noster intellectus et immutavit in eiusdem intellectu quse intelligenda esse credenda quæ intelligat; et eadem ipsa ut magis magis intelligantur, in ipso intellectu proficiat mens. Sed hoc non fit propriis tanquam naturalibus viribus, sed Deo donante atque adjuvante” (Enarr. in. Ps. cviii, Sermo xviii, 3, “Our intellect therefore is of use to understand whatever things it believes, and faith is of use to believe, whatever it understands; and in this way these things shall be understood, the thinking faculty[mens] is of use in the intellect. But this is not brought about as by our own natural powers, but by the gift and the aid of God.” cf. Sermo xliii, 3, in Is., vili, 9; P. L., V, 255).

(d) Further, the habit of faith may be stronger in one person than in another, “whether because of the more certain certitude, or because of the stronger virtue, or because of the greater confidence” (II-II, q. v, a. 4).

(e) We are sometimes asked whether we are really certain of the things we believe, and we rightly answer in the affirmative; but strictly speaking, certitude can be looked upon from two standpoints: if we look at its cause, we have in faith the highest form of certitude, for its cause is the Essential Truth; but if we look at the certitude which arises from the extent to which the intellect grasps a truth, then in faith we have not such perfect certitude as we have of demonstrable truths, since the truths believed are beyond the intellect’s comprehension (II-II, q. iv, 8; de Ver., xiv, and i, ad 7°).

VIII. THE GENESIS OF FAITH IN THE INDIVIDUAL SOUL.—(a) Many receive their faith in their infancy, to others it comes later in life, and its genesis is often misunderstood. Without encroaching upon the article Revelation, we may describe the genesis of faith in the adult mind somewhat as follows: Man being endowed with reason, he will, if, as development of his person precede faith; now we can prove by reason the existence of God, the immortality of the soul, and the origin and destiny of man; but from these facts there follows the necessity of religion, and true religion must be the true worship of the true God not according to our ideas, but according to what He Himself has revealed. But if God reveal Himself to us? And, granting that He can, where is this revelation to be found? The Bible is said to contain it; does in-
investigation confirm the Bible's claim? We will take but one point: the Old Testament looks forward, as we have already seen, to One Who is to come and Who is God; the New Testament shows us One Who claimed to be the fulfillment of the prophecies and to be God; this claim He confirmed by His life, death, and resurrection, by His teaching, miracles, and prophecies. He further claimed to have founded a Church which should enshrine His revelation and should be the infallible guide for all who wished to come to the truth and recognize their mistakes. Who of the numerous existing Churches is His? It must have certain definite characteristics or "notes". It must be One, Holy, Catholic, and Apostolic; it must claim infallible teaching power. None but the Holy, Roman, Catholic, and Apostolic Church can claim these characteristics, and her history is an irrefragable proof of her Divine mission. If, then, she be the true Church, her teaching must be infallible and must be accepted.

(b) Now what is the state of the inquirer who has come thus far? He has proceeded by pure reason, and, if on the grounds stated he makes his submission to the authority of the Catholic Church and believes her doctrines, he has only human, reasonable, fallible faith. Later on he may see reason to question the various teachings of that Church, and may even at some truth taught by the Church, and he may withdraw the assent he has given to her teaching authority. In other words, he has not Divine faith at all. For Divine faith is supernatural both in the principle which elicits the acts and in the objects or truths upon which it falls. The principle which elicits assent to a truth which by itself is the grasp of the human mind must be that same mind illumined by a light superior to the light of reason, viz. the light of faith; and since, even with this light of faith, the intellect remains human, and the truth to be believed remains still obscure, the final assent of the intellect must come from the will assisted by Divine grace, as seen above. But both this Divine light and this Divine grace are pure gifts of God, and are consequently only bestowed at His good pleasure. It is here that the heroism of faith comes in; our reason will lead us to the door of faith, but there it leaves us; and God asks us of that earnest wish to believe for the sake of the reward—"I am thy reward exceeding great"—which will allow us to repress the misgivings of the intellect and say, I believe, Lord, help my unbelief." But St. Augustine gives us this same principle expressed: "Utum defectio ratio, ibi fidel verificatio" (sermo ccxlii, P. L., V, 1157—"Where reason fails there builds up"").

(c) When this act of submission has been made, the light of faith flood the soul and is even reflected back upon those very motives which had to be so laboriously studied in our search after the truth; and even those preliminary truths which precede all investigation, e.g. the very existence of God, become now the object of our faith.

IX. FAITH IN RELATION TO WORKS.—(a) Faith and no works may be described as the Lutheran view. "Esto pector, pecca fortiter sed fortius fide" was the heresiarch's axiom, and the Diet of Worms, in 1527, condemned the doctrine that good works are necessary for salvation. (b) Works and no faith may be described as the modern view, for the modern world strive to make the worship of humanity take the place of the worship of the Deity ("Do we believe?" as issued by the Rationalist Press, 1904, ch. x: "Credul and Conduct" and ch. xv: "Rationalism and Morality". Cf. also "Christianity and Rationalism on Truth", published by the same press, 1904). (c) Faith shown by works has ever been the doctrine of the Catholic Church and is explicitly taught by St. James, ii, 17: "Faith, if it have not works, is dead." The Council of Trent (Sess. VI, canons xix, xx, xxiv, and xxvi) condemned the various aspects of the Lutheran doctrine, and from what has been said above on the necessity of charity for "living" faith, it will be evident that faith does not exclude, but demands, good works, for charity or love of God is not real unless it induces us to keep the Commandments; "He that keepeth His word, in whom He dwelt in very deed the charity of God is perfected" (I John, ii, 5). St. Augustine sums up the whole question by saying "Laudo fructum boni operis, sed in fide agnosco radicem"—i.e. "I praise the fruit of good works, but in faith I understand the root." (Enarr. in Ps. xxxi, P. L., IV, 259).

X. LOSS OF FAITH.—From what has been said touching the absolutely supernatural character of the gift of faith, it is easy to understand what is meant by the loss of faith. God's gift is simply withdrawn. And this withdrawal must needs be punitive, "Non enim deseret opus suum, si ab opere suo non deseratur" (St. Augustine, Enarr. in Ps. exlv—"He will not desert His own work, if He be not deserted by His own work"). And when the light of faith is withdrawn, there inevitably follows a darkening of the mind regarding even the very motives of credibility which before seemed so convincing. This may perhaps explain why those who have had the misfortune to apostatize from the faith are often the most virulent in their attacks on the holy "infant of the homini illi", says St. Augustine, "nisi et ipsius fidel Dominus protegit", i.e. "Woe be to a man unless the Lord safeguard his faith" (Enarr. in Ps. cxx, 2, P. L., IV, 1614).

XI. FAITH IS REASONABLE.—(a) If we are to believe present-day Rationalists and Agnostics, faith, as we define it, is unreasonable. Agnostics decline to accept it because he considers that the things proposed for his acceptance are preposterous, and because he regards the motives assigned for our belief as wholly inadequate. "Present me with a reasonable faith based on reliable evidence, and I will joyfully embrace it. Until that time I have no choice but to remain an Agnostic" ("Medicus" in the "Do we Believe"? Controversy, p. 214). Similarly, Francis Newman says: "Paul was satisfied with a kind of evidence for the resurrection of Jesus which fell exceedingly short of the demands of modern logic; it is absurd in us to believe, barely because they believed" ("Phases of Faith", p. 180). Yet the supernatural truths of faith, however they may transcend our reason, cannot be shown to us in a manner so that they are not opposed to truth, and the same Deity bestows those truths on reason by which we assent to first principles is Himself the cause of those principles, which are but a reflection of His own Divine truth. When He chooses to manifest to us further truths concerning Himself, the fact that these latter are beyond the grasp of the natural light which He has bestowed upon us will not prove them to be contrary to our reason. Even so pronounced a rationalist as Sir Oliver Lodge says: "I maintain that it is hopelessly unsound to imagine it possible that man is the highest intelligent existence" (Hibbert Journal, July, 1906, p. 727).

Agnostics, again, take refuge in the unknowableness of truths beyond reason, but their argument is fallacious, for surely knowledge has its degrees. I may not fully comprehend what you say, but I can know a great deal about it; I may not have demonstrative knowledge of it, but that is no reason why I should reject that knowledge which comes from faith. To listen to many Agnostics one would imagine that appeal to authority as a criterion was unscientific, though perhaps nowhere is authority appealed to so unscientifically as by modern scientists, modernists, and modern critics. But, as St. Augustine says, "If God's providence govern human affairs we must not despair or doubt but that He hath ordained some certain authority, upon which staying ourselves as upon a certain ground or step, we may be lifted up to God."
tism, one God and Father of all" (Eph., iv, 3-6). The objective unity of the Catholic Church becomes readily intelligible when we reflect upon the nature of the bond of union which faith offers us. For our faith comes to us from the one unchanging Church, the pillar and ground of truth", and our assent to it constitutes a light for our own guidance so that our wills from the one unchanging God Who can neither deceive nor be deceived. Hence, for all who possess this, it faith constitutes an absolute and unchanging bond of union. The teachings of this faith develop, of course, with the needs of the ages, but the faith itself remains unaltered. Modern views are entirely destructive of such unity of belief because their factor BASED ON THE PRIVILEGE OF EACH MAN TO FORMULATE HIS OWN WHICH HAS BEEN CONDOMINATE BY HIS OWN CONSCIENCE. Certain writers do indeed endeavour to overcome the resulting conflict of views by upholding the supremacy of universal human reason as a criterion of truth; but this writer cannot give the value of united Christian testimony until one is able to stand apart from it, so to speak, and ask whether it truly rests upon an adequate foundation. It is a matter of no little importance to know what constitutes the basis of the great faith which has been handed down to us; we owe everything to the Church who has preserved it, and who has handed it down to us. The Church has preserved the faith in its original form, without alteration, and has handed it down to us, towards God and mankind, the bond of union is the greatest safeguard of faith. Whether we believe in God and its happiness, we shall find in the author of the Church and its successor nothing but the manifestation of a Divine plan whereby all things are directed towards their appointed end (St. Thomas, Lec. xiv, in II Phys.). Similarly, the vagaries of Humanism blind men to the fact of man's essentially finite character and hence preclude all idea of faith in the infinite and the supernatural (cf. "Naturalism and Humanism" in "Hibbert Journal", Oct., 1897.).

XII. FAITH IS NECESSARY.—"He that believeth and is baptized," said Christ, "shall be saved, but he that believeth not shall be condemned" (Mark, xvi, 16); and St. Paul sums up this solemn declaration by saying: "Without faith it is impossible to please God" (Heb., xi, 6). The absolute necessity of faith is evident from Deification and the beginning and our end and has supreme dominion over us; we owe to Him, consequently, due service which we express by the term religion. Now true religion is the true worship of the true God. But it is not for man to fashion a worship according to his own devices; none but God can declare to us in what true worship consists, and this declaration constitutes the body of revealed truth. We are not permitted to change any of these, if we would attain the end for which we came into the world, we are bound to give the assent of faith. It is clear, moreover, that no one can profess indifference in a matter of such vital importance. During the Reformation period no such indifference was professed by those who quitted the fold; for them it was not a question of faith or unfaith, so much as the necessity of a change of faith from the official to the new and put into practice. The attitude of many outside the Church is now one of absolute indifference; faith is regarded as an emotion, as a peculiarly subjective disposition which is regulated by no known psychological laws. Thus Taine speaks of faith as "one source whereof qui est formee au plus profond de l'ame, sous la poussée et la chaleur des instincts immuants"—"a living fountain which has come into existence in the lowest depths of the soul under the impulse and the warmth of the immanent instincts". Indifferentism in all its phascs was condemned by Pius IX in the Syllabus "Quanta eura" in Prop. XV, "Any man is free to embrace and profess whatever form of religion he reason approves of"; XVI, "Men can find the way of salvation only in the right use of the worship of the true and living God"; XVII, "We can at least have good hopes of the eternal salvation of all those who have never been in the true Church of Christ"; XCVIII, "Protestantism is only another form of the same true Christian religion, and men can be pleasing to God in it as in the Catholic Church."

XIII. THE CANDIDACE AND STABILITY OF CHURCH's prayer for the unity of His Church, the highest form of unity conceivable, "that they all may be one, as thou, Father, in me, and I in Thee" (John, xvii, 21), has been brought into effect by the unifying force of a bond of a faith such as we have analysed. All Christians have been taught to be careful to keep the unity of the spirit in the bond of peace, one body and one spirit, as you are called in one hope of your calling; one Lord, one faith, one bapt
Faith, Protestant Confessions or.—That the Catholic Church, which claims the prerogative of teaching revealed truth with infallible certitude, should have drawn up articles of faith and demanded for them the internal assent and outward confession of her children, was logical and consistent; but it is difficult to understand with what logic or consistency Protestantism, which proclaimed the Bible, as interpreted by representatives of the individual, to be the sole and sufficient rule of faith, could follow her example. It is said that Protestants look upon their doctrinal standards as authoritative only in so far as they agree with the "word of God"; but each sect so imbuces its members from early childhood with its peculiar tenets, that long before they are able to reason theologically, they are fixed in their religion and may be able to gather a sufficient number of followers to form a separate communion; but the bulk of the population remain true to the faith of their parents, or of their native land. In the palmy days of Protestantism, it was not the reading of the Bible that held the denominations together, but their respective Confessions of Faith, inculcated by the preachers and enforced under severe penalties by the civil power. As a practical result, the "word of God" was interpreted in accordance with formulae devised by men; the Anglican read into his Bible the Thirty-Nine Articles, the Lutheran the Augsburg Confession, the "Reformed Churches," the Heidelberg Catechism. Each new sect being obliged to prove its raison d'etre by showing just how it differed from others, a very large number of Confessions appeared, varying in size from a few articles to long theological treatises. As a rule, the later Confessions are merely modified copies of the older ones, altered to suit local circumstances or personal views.

Types.—Since the Protestant revolt originated almost independently, and simultaneously, in Germany and in Switzerland, there has been a natural cleavage between the Lutheran and the "Reformed" tenets of Zwingli, afterwards merged into Calvinism. The cleavage between Lutheranism and Calvinism goes deeper than the divergence of views concerning the Real Presence in the Eucharist. Luther drifted into heresy gradually. In spite of his hatred of the pope, he preserved a lingering reverence for the Church which he had been taught to respect for so many years. He retained as much of the ancient beliefs and liturgy as could be made to fit into his peculiar views on sin and justification. So adroitly and tentatively were the changes made in Catholic phraseology and worship, that but few of the Lutheran common people felt they had drifted away from the Church of their fathers. Luther himself, in a famous passage, boasted that the eye of the ordinary layman could detect little or no difference between the Lutheran service and the Catholic Mass. As to the theological opinions, the layman was equally deceived; for it was not new for him to be taught that we are saved by the free grace of God through the merits of Christ's Blood. That the temporal ruler was zealous in the cause of the Reformation shocked the common man, for a certain jus reformandi had always been claimed, and had frequently been exercised, by Catholic German princes. Quite different was the case with Zwinglianism and Calvinism. Laying no claim to identity or continuity with the ancient Church, the "Reformed Churches" began, generally amidst iconoclastic riots, by rooting out the entire fabric of Catholicism. After the futile attempt of Philip of Hesse, at the Marburg Conference (1–4 Oct., 1520), to reconcile the German and Swiss Reformers, these went their several ways, hating and reviling each other little less than they hated and reviled the Church of Rome. It is scarcely needless to add that since the collapse of dogmatic Protestantism, its conflicting creeds possess little more than an historical interest. Even where subscription to a Confession is still exacted as a condition for holding office, the ceremony is regarded as a mere formality.

The Lutheran Confessions.—(1) The oldest and most authoritative of the Lutheran creeds was the Augsburg Confession. It was drafted chiefly by Melanchthon, on the basis of Luther's Marburg, Schwabach, and Torgau articles, and bore the signature of the German princes, amongst others, his son John Frederick, Ernest and Francis, Duke of Lüneburg, Philip, Landgrave of Hesse, Wolfang, Prince of Anhalt, and of the representatives of the two imperial cities, Nuremberg and Reutlingen. On 25 June, 1530, copies of it, in Latin and German, were presented to Charles V, at the diet of Augsburg, and the German version was published, with the title, by his commissioner, Nicholaus von Jach, a fellow of Marburg, and an able writer, his edition was authorized by the young Emperor. The first authorized Latin edition was that published at Augsburg in 1531, and the Latin text was corrected by him, and the Latin copy which he brought with him to Spain, giving the other into the custody of the Archbishop of Mainz. Both seem now to be irretrievably lost. The document ought to have retained its original title of Apologia, for it is an artful attempt to persuade the Emperor and the Estates that in the Lutheran doctrine, "there is nothing discrepant between the Scriptures, or with the Catholic Church, or with the Roman Church, so far as that Church is known from its writers".

The Lutherans teach (Art. I) the Nicene belief in God and the Trinity; (Art. II) Original Sin; (Art. III) the Incarnation; Death and Resurrection of the Son of God; (Art. IV) Justification by Faith. By leaving out the obnoxious word sola (alone), the article may be glossed in a Catholic sense. They believe furthermore (Art. V) in a Divinely appointed ecclesiastical ministry, no mention being made of Luther's universal priesthood of believers. They teach (Art. VI) that "faith should bring forth good works, and that men ought to do the good works commanded by God, because it is certain that the same persons are not judged as meriting justification before God by their faith", if any one had taught differently. In Articles V and VIII, "On the Church", instead of asserting the heresy of an invisible Church, they define it to be "the congregation of saints [the German version has it the assembly of all the faithful], in which the Gospel is rightly taught and the Sacraments rightly administered, and in which the members who hold the ministry of evil men are useless and ineficacious. In Article IX, "On Baptism", they teach that it is necessary to salvation, and that infants are to be baptized. The famous Article X reads as follows: "Of the Lord's Supper: they teach that the Body and Blood of Christ are truly present and are distributed to those who eat of the Lord's Supper, and they reject the Catholic teaching." Here Luther's theory of communion is sedulously shrouded over. Art. XI teaches that private absolution must be retained, though in confession it is not necessary to enumerate all sins committed.

Art. XII, "On Penance", teaches that those who fall, after Baptism, may obtain the remission of sins, whether by a public or a private penance with the Church to absolve the repentant. Penance, they teach, consists of two parts, confession and faith. In the hazy Article XIII, "On the use of the Sacraments", they "condemn those who teach that the Sacraments justify ex opere operato, without teaching that faith in the remission of sins is requisite in the use of the Sacraments", which statement shows how scant was Melanchthon's acquaintance with Catholic doctrine. Art. XIV, "On Ecclesiastical Orders", limits itself to the harmless assertion that "no one should publicly teach in the Church, or administer the Sacraments, unless he be rightly called." Art. XV, "On Ecclesiastical Rites", retains such rites "as may be observed without sin", instancing "fixed holydays, feasts and such like", but "consciences are not
to be burdened by such things, as if necessary to sal-

ution.

Art. XVI inculcates the duty of obedience to civil rulers. "The Charity of Charles VI, the last Judg-

ment. Art. XVIII, "On Free Will," is a bold de-

parture, on the part of Melanchthon, from Luther's

fundamental heresy of the enslaved will of fallen man.

"They teach that man's will hath some liberty to

work a civil righteousness, and to choose such things

as reason can reach unto; but that it hath no power
to work the righteousness of God or a spiritual right-
ness conceived with the Spirit of God."

We claim the Czechs, as well as Melanchthon, from the

German.

The "Confessio Augustana," as his private property, he continued ever after to com-

ment on it, and revise the text to suit his wavering

views. Most notorious, and the source of endless
trouble amongst Lutherans, was the altered edition

of 1540, issued at a time when Melanchthon was under

the spell of Calvin. This document, which was

wished to be read that "with the bread and wine

the Body and Blood of Christ are truly exhibited to those

who eat in the Lord's Supper", a statement to which a

Calvinist might subscribe. We must not, however,

throw too much blame on Melanchthon and other

preachers; the political magnates have to be considered.

The Smalcald Articles.—Any hopes of a recon-
ciliation which were founded on the studied modera-
tion of the Augsburg Confession were rudely dispelled

seven years later when the Protestant Estates, assem-
bled at Smalcald, spurned the pope's offer of that

General Council for which, with more than dubious

sincerity, they had clamored so long, and commis-
sioned Luther to expound the articles in which they

wished to depart from the teachings of the general

tines of the Augsburg Confession, Luther,

by injecting his strongest anti-papal virus into the doc-

ument, changed it from an olive-branch into an open

declaration of war with the Catholic Church. The

pope and the devil are identical; the Mass is the

dragon's tail, producing all sorts of abominations and

illegacies; purgatory is a Satanic delusion, etc., etc.

When asked to defend the words, "It is the Mass!

sion, Melanchthon did so, with the proviso that "if

the pope would admit the gospel, we might permit

him, for the sake of peace and the common concord of

Christendom, to exercise by human right, his present

jurisdiction over the bishops, who are now or may

hereafter be under his authority."

The princes, re-
senting this covert attack upon their spiritual sover-
eignty, compelled the weak man to write a pamphlet
denouncing the pope as anti-Christ.

The Formula of Concord.—Scarcely were Luther's

remains placed in the tomb than, as he had foreseen,

fierce contentions broke out among the preachers,

which shook the Lutheran Churches to their founda-
tions. The earliest of these theological battles raged

about the peace of the public mind. For several years departed more and more openly from the two

most important tenets of his master; on the subject

of free will in fallen man, he approached closely to

the Catholic position; regarding the Eucharist he

became ever more Calvinistic. He also incurred the

reproaches of the orthodox by accepting, with modi-
fications, the "Interim of Religion" of Charles V. In

course of time, new topics of controversy rose to di-

vide the theologians, until, in 1570, Jacobus Andreae
could write "that there were scarcely a couple of

preachers among them who did not disagree about

some article or other of the Augsburg Confession

(Jessen, op. cit., VIII, 403). Tired of their endless

wranglings, which were as destructive of moral and

spiritual life as of religious order, the princes of

Saxony proposed to cut the knot "by princeley edict."

He suggested to the Lutheran princes to convene an

assembly to which each would bring his own code of
doctrine. From all these different formulae they

would then, with the help of a few amicable theolo-
gians, construct a general code which should be

printed, and should be considered binding on the

whole body of preachers. This convention was held

at Torgau, in June, 1576. In addition to twelve

Saxon divines, whom the Elector had cowed into

submission, there were present, Andreae, Chemnitz,

Chtytreus, Musculus and Koerner.

A new "Formula of Concord," known as the "Tor-
gau Book", was drawn up entirely in the spirit of Luther, eliminating Calvinism and Philippism. This book not being favourably received by several princes, Augustus summoned a fresh conference in the monastery of Bergen, near Magdeburg, where several alterations were proposed. As finally revised, the "Formula of Concord" was sent to the princes to be propounded and enforced. Augustus of Saxony, John George of Brandenburg, and other princes, gathered their preachers together and compelled them publicly to subscribe their signatures, "not only with their hands, but with their hearts." Many of the princes repudiated the book; the King of Denmark threw his copy into the fire. The only Lutherans at the present day who retain any portion of it in Munster.

The "Formula" is divided into two parts (1) the Epitome, and (2) the Solida Declaratio. The Epitome sums up Luther's "pure doctrine" in succinct form; the second part goes over the same ground more at large. Although the "Formula" begins with the stereotype Protestant declaration that the Bible is "the only rule and norm" of faith, yet, as Dr. Schaff remarks, it quotes Dr. Luther "as freely, and with at least as much deference to him, as do the Roman Catholics quote the Fathers'.

Confessions of the Reformed Churches.—The so-called Reformed creeds, of which thirty or more are extant, are based on the radical tenets of Zwingli and Calvin. We can only notice the most important of them, The Confessio Tettartopoliensis.—As the Strasbourg reformer and his followers took up the Zwinglian view of the Eucharist, they were shunned by the Lutherans at the Diet of Augsburg (1530), and were not allowed to sign the Augsburg. They therefore drew up a separate Confession, following the general lines of the Lutheran document, a copy of which had been given to them by Philip of Hesse. Bucer touches upon several points, but Melancthon has enlarged on them, among others the "invisible church", the rejection of tradition and of images. The Mass is denounced as "an intolerable abomination". Art. 18, "On the Eucharist", is given so enigmatically, that it is impossible to discover the real meaning. After great trouble the Strasburgers were able to secure the adhesion of three Southern German towns, Constance, Augsburg, and Ulm. From these four cities the Confession obtained the name of Tetrapolitan. It was delivered to the Emperor, 9 July, Charles refused to permit it to be read at the Diet, and commanded the Catholic theologians to confute it. It was printed in the autumn of 1531 at Strasbourg, together with a "Vindication". It did not long remain in authority, for the towns subscribed to the Augsburg Confession in order to join the Smalend League. Zwingli himself sent to the Diet, July 1530, a Confession of Faith in which he openly denied the Real Presence, and denounced purgatory as "an injurious fiction which sets Christ's merits at naught." He also, shortly before his death, sent a Confession to Francis I.

First Confession of Basle, also called of Muhlenbein because adopted by that city, was drafted in 1531 by Oecolampadius and after his death elaborated by his successor, Oswald Myconius. It was promulgated by the city authorities of Basle, 21 Jan., 1531. It is a brief document, moderate in tone and calculated to conciliate the Lutherans. The text, as we now possess it, was revised in a Calvinistic sense in 1561. Of more importance is the Second Confession of Basle, known also as the "Helvetia Prior." In the "Wittenberg Concord" Luther had forced his peculiar views, regarding the Eucharist, on Bucer and several other mediating preachers. The formula was reluctantly accepted by the Southern German towns, whose only protection was to be admitted into the Smalend League; but it was rejected by the independent Swiss. At the same time, it was recognized that some means should be devised of healing the dissensions among the Protestants, now that the convening of a General Council was in prospect. It was resolved to draft a new Confession which should be presented to the council as the national creed of the Protestant Cantons. An assembly met at Basle, 30 Jan., 1536, composed of the most prominent Swiss preachers and delegates from Zurich, Bern, Basle, Schaffhausen, St. Gall, Muhlhausen, and Biel. A committee consisting of Henry Bullinger, Oswald Myconius and Simon Grynaeus, was commissioned to draw up the document. It was written in Latin, and a free German translation made by Leo Jud was adopted by the meeting. Its tone is decidedly Zwinglian, but on the disputed points of the sacraments the Lord's Supper there is an evident effort to approach as near as possible to the Lutheran phraseology.

A copy of the Confession was brought to Luther by Bucer; and it was a great surprise to the Swiss that the Wittenberg reformer declared himself satisfied with it. Luther's change of attitude was due partly to the political needs and wishes of the Smalend princes, and partly to the altered phraseology of the Confession on the subject of the sacraments, due to the growing influence of Calvin. Whereas the Zwinglian flatly denied the corporeal presence of Christ in the Eucharist, Calvin preached His "spiritual presence", which really amounts to the same thing. The "Helvetia Prior" remained for some years the national creed of the Swiss Protestants; but it was superseded in 1556 by the "Helvetia Posterior". This latter document was originally the private confession of Henry Bullinger of Zurich; but it was formally accepted as a symbolic book by nearly all the Reformed Churches of Europe. It follows the main lines of the earlier confessions, but is much lengthier, and more in the nature of a theological treatise. It is the storehouse from which the Confession of the Reformed Churches has been drawn. These documents of Calvin have been looked upon as of dogmatic authority, viz., "The Catechism of Geneva" (1541), the "Consensus of Zurich" (1549), which in twenty-six articles expounds Calvin's views on the sacraments, and the "Consensus of the pastors of the Church of Geneva" (1552), which proclaims the Calvinistic dogma of absolute predestination.

The Gallican Confession, for the French Protestants, was the first of the purely Calvinistic Confessions. The original draft was made by Calvin himself. It was revised in various synods, from the first of Paris (1539), to the seventh National Synod at La Rochelle (1571), from which latter town it drew its popular name of "the Rochelle Confession". Its Calvinism is undiluted, and it offers all the peculiarities of that innovator. The Roman Church comes in for a fair share of vituperation, for its "corruptions", "superstitions", and " idolatries". "Nevertheless", it says, "as some trace of the Church is left in the papacy... we confess that those baptized in it do not need a second baptism." This concession does not imply that "idolaters" are to be tolerated, for the Author of just government "has not only given to magistrates, to suppress crimes against the first as well as against the second table of the Commandments of God." This Confession remained in authority among French Protestants, until the Voltairianism and Rationalism of the eighteenth and nineteenth centuries deprived it of all value. In the thirtieth General Synod of the Reformed Church of France (10 July, 1782), the only approach to a Confession of Faith that could be made was the adoption by the slender majority of sixteen votes of the following vague resolution: "The Reformed Church of France, on resuming her synodal action, which for so many years had been interrupted, desires, before all things to offer her thanks to God, and to testify her love to Jesus Christ, her Divine Head, who has sustained and comforted
FAITH

763

FAITH

der her during her successive trials. She declares, through the organ of her representatives, that she remains faithful to her spiritual foundation on which she was founded. With her fathers and her martyrs in the Confession of Rochelle, and with all the Churches of the Reformation in their respective creeds, she proclaims the sovereign authority of the Holy Scriptures in matters of faith, and salvation by faith in Jesus Christ, the Only-begotten Son of God, who died for our sins, and was raised again for our justification, and by faith in his teaching, of her worship and her discipline, the grand Christian facts represented in her religious solemnities, and set forth in her liturgies, especially in the Confession of sins, the Apostles' Creed, and in the order for the administration of the Lord's Supper.

The Heidelberg Catechism, published in 1563 by order of the Elector Palatine, Frederick III, was generally accepted by Calvinists throughout the world as a faithful and authoritative exposition of the faith of the Reformed Churches. It was written by two professors at the Heidelberg university, Zachary Bär (commonly known as Ursinus) and Caspar Olevig (Olevianus). It was drawn up with the twofold purpose of furnishing a manual of Christian doctrine and serving as a catechism for both preachers and laymen. Its questions and answers, it treats of man's sin and misery (3-11), the redemption by Christ (12-85), and the gratitude of the redeemed (86-129). The second part is the largest, as it gives an explanation of the Apostles' Creed and the sacraments. The third part deals with the Ten Commandments and the Lord's Prayer. The general tone of the document is moderate, but with the exception of the truncal 80th question, for which the professors are not responsible; for it did not appear in the first edition, and was later inserted by the fanatical Elector. Since it has been in no small measure the source of Protestant anti-Catholic intolerance, it is worth while to lay it before the reader.

What difference is there between the Lord's Supper and the Popish Mass? The Lord's Supper testifies to us that we have full forgiveness of all our sins by the one sacrifice of Jesus Christ, which he himself has once accomplished on the cross; and that by the Holy Ghost we are engrafted into Christ, who with his true body is now in heaven at the right hand of the Father, and who is present in us. As we have forgiveness of sins through the sufferings of Christ, unless Christ is still daily offered for them by the priests; and that Christ is bodily under the form of bread and wine, and is therefore to be worshipped in them. And thus the Mass, at bottom, is nothing else than a denial of the one sacrifice and passion of Jesus Christ, and an accursed idolatry.

Dr. Schaff doubts the "wisdom of inserting controversial matter into a catechism"; but strangely enough pronounces, that "it must be allowed to remain as a solemn protest against idolatry" (Credo of Christendom, I, 536). If the central dogma of the Catholic worship is really idolatrous, what is the benefit in retaining it, as such, in a Catechism of Faith? The Heidelberg Catechism was translated into all the languages of Europe, and into several extra-European tongues. It obtained great authority in Scotland and England; but during the following century it was supplanted by the Westminster Confession. It was introduced into America by the Dutch and German Reformed churches, and is said to be now more highly prized by the American Reformed Churches than by the Germans in the Fatherland.

The Confessio Belgica is venerated as of symbolic authority, together with the Heidelberg Catechism, by the Reformed Churches in Belgium, Holland and their offshoots throughout the world. This document, consisting of thirty-seven articles, was written in French about 1561, by Guy de Bray, assisted by other preachers. The intentions of the authors, we are told, based on the fear of themselves, was not to issue a new creed, but to prove the truth of their belief from the sacred writings. They follow closely the Confessio Gallicana, seeking to support their theses by texts of Scripture. Translations were made into Dutch and Latin, and the document was submitted to Calvin and many other Reformed divines. In 1562 a copy was transmitted to Philip II with a letter protesting the presence of the words "idolatry" and "false worship" against the king (Creeds). In the opinion of Calvinists, the wrecking of churches and maltreatment of priests and nuns were not crimes but imperative duties. Art. 36 admonishes magistrates of their obligation "to remove and prevent all idolatry and false worship; that the kingdom of anti-Christ (i.e. popery) may be destroyed." The Confessio Belgica was revised and adopted by the successive synods in the Netherlands, until finally the Synod of Dort, in its 19th session (29 April, 1619), subscribed to it as the public creed of the Reformed Churches. The Synod of Dort, the most representative gathering of the Calvinists, was convened by the authority and at the expense of the States-General. It opened its sessions at Dort, or Dordrecht, 13 Nov., and continued its labors and combats with the papists and Arminians until May, 1619. In addition to the Dutch and Belgians, there were delegates from Great Britain, the Palatinate, Hesse, and Switzerland. The delegates chosen by the French Huguenots were forbidden by the crown to leave France. The occasion of this international gathering was the defection from pure Calvinism of the Dutch minister Jan Ammos van Berckel (Arminius). Many members of the synod were orthodox on the subject of predestination absolute, the condemnation of the Remonstrants was a foregone conclusion. The canons were framed in the most unbending form, and 200 ministers who refused to subscribe were deposed. Although the foreign delegates attached their names to the canons of Dort, yet, outside of the Netherlands, they were never regarded as canons. In England, especially, there was fierce opposition, and from rival pulpits the pros and cons of God's (or Calvin's) eternal decree were thundered into the ears of the bewildered people.

The numerous Minor Reformed Confessions, such as the Arethia (Brandenburg), the Hungarian, the Bohemian, and the Dutch, are not the subject of this book. The most part of an ephemeral nature, need not detain us. For an account of the Thirty-nine Articles of the Anglican Church the reader is referred to the article Anglicanism. When the American colonies achieved their independence, the Anglicans in America, until then subject to the Bishop of London, formed themselves into "The Protestant Episcopal Church in the United States of America" and, after lengthy debates, in a General Convention held at Trenton, New Jersey, 8-12 Sept., 1801, adopted the Thirty-Nine Articles, omitting in Art. 8 the Athanasian Creed and making such other alterations as were demanded by the changed political conditions. They retained the offensive codex to Art. 31, in which "the 23rd Article of the Thirty-Nine Articles" of the majority of Christians) are denounced as "blasphemous fables and dangerous deceit"; but in later editions the milder statement is substituted, that Transubstantiation "hath given occasion to many superstitions." Episcopalians, also, have not yet eliminated from their articles the calumnies (Art. 22), that the "Ronish" ceremonies sanction the "Adoration, as well of Images as of Relics.

The Scottish Confession.—By the year 1560, Protestantism in Scotland, through the aid of English gold and troops, had gained complete ascendancy. Losing no time, the Protestant "Lords of the Congregation," convened a revolutionary Parliament of the estates of the realm, at Edinburgh, 1 Aug., whose first act was to
repudiate the Catholic religion, and commission John Knox and other preachers to compile a new creed. Familiar with the Swiss Confessions, Knox performed his task in four days. The document, amended by the leaders, was submitted to Parliament and with very little discussion and a mere handful of dissentient votes, ratified by the estates, 17 Aug. Though repudiated by Queen Mary, who was at the time in France, it was imposed upon the people as the religion of Scotland and the exercise of the ancient worship was forbidden under penalty of confiscation, exile, and death.

The "Confessio Scotica", or "Confession of the Faith and Doctrine beleve and professit be the Protes- tant principles of faith", begins with a brief preface in which the writers "take God to record in every conscience, that fra our heartis we abhorre all sectis of heresie and all teachers of erroneous doctrine." They do not claim to be infallible. "Gif onie man shall note in this our Confession onie Article or sentence regu- pugand to God's halie word" they "do promise unto him satisfactiou fra the mouth of God, that is, fra his halie scriptures, or else reformation of that quhilk he sae prove to be amisse." This hypothetical admission of fallibility, so remarkable in a Calvinistic document, was practically harmless; for no one ever convinced John Knox that he was in error.

The Confession presents, in twenty-five articles, a summary of the Christian Faith as held by the Scottish people in accordance with the principles of the Apostles' Creed. They are written in a vigorous, original, and, for a document proceeding from the pen of Knox, in an extremely moderate style. The moderation was obviously due to the necessity of securing, if possible, for the sake of legality, the signature of the Catholic sovereign. Although the ground tone of the Confession is Calvinistic, yet the Calvinistic principles are dealt with in a way that makes them applicable only when treating of the "Kirk" and the Sacraments that the "Papistical Kirk" and the Catholic doctrine of the Holy Mass are denounced and misrepresented: "The notes, signs, and assured tokens whereby the immaculate Spouse of Christ Jesus is known fra the horrible harlot, the Kirk malignant, we affirme, are nother Antiquitie, Title usurpt, lineal Descenece, Place appointed, nor multitudes of men approving ane error."

In addition to the usual Protestant notes of the true Church, viz. "the trow preaching of the Word of God" and "the right administration of the Sacra- ments", the Confession assigns a third element peculiar to the Scottish Kirk, i.e. "Ecclesiastical discipline uprightly ministered, as Goddis Wortede preaches, which is necessaryly necessary, and altogether necessary." The development of Presbyterianism was a lucid commentary on the new principle herein tentatively pro- pounded. In Art. 24, "Of the Civilie Magistrate", the Confession proclaims openly the duty of suppressing the Catholic religion. "To Kings, Princes, Rulers and Magistrates, we affirme that mostchiefe and most necessarie function, is the destruction of all religious appertaines; so that not onlie they are ap- pointed for Civill policie, but also for maintenance of the trow Religionum, and for suppressing of Idolatrie and Superstitioun whatsoever."

After the forced abdication of Queen Mary in 1567, Parliament again proclaimed the Confession as the creed of "the only true and holy Kirk of Jesus Christ within Scotland", and raised it to the standard of the Scots, until superseded by the West- minister Confession. In the estimation of the Presby- terian preachers, the Confession of Knox was sadly defective; it had failed to denounce with sufficient vigour the Roman Antichrist. This omission was deemed particularly unfortunate about 1580, when the young King James I. had fallen under the spell of his French kinsman, Esme Stuart, upon whom the king had bestowed the earldom of Lennox, and who reigned supreme in his councils. It was probably at the sug- gestion of this able and unscrupulous politician, that James commissioned the preacher John Craig to draw up the most violent condemnation of Papistry that ever issued from a Calvinistic pen. It is known to historians as the King's Confession, sometimes as the "Scottish Secunda". In 1581, when the religious conflicts in Scotland turned on the question of regency in gen- eral, as the "National Covenant". After endorsing the Confession of Faith in 1600, it proceeds to "abhor and detest all contrary Religion and Doctrine; but chiefly all kind of Papistry in general and particular heads"; among others, "the usurped tyranny of the Roman Antichrist upon the Scriptures of God, upon the Kirk, the civil magistrature, and congregations of men; all his tyrannical laws and decrees, and proceedings against our Christian liberty; . . . his five bastard sacraments, with all his rites, ceremonies, and false doctrine added to the ministration of the true sacra- ments without the Word of God; his cruel judgment against infants departing without the sacrament; his absolute necessity of baptism; his blasphemous opinion of transubstantiation; his devils mass; his blas- phemous priesthood; his profane sacrifice for sins of the dead and the quick; . . . his worldly monarchy and wicked hierarchy; his three solemn vows; his er- roneous and bloody decrees made at Trent, with all the subscribers and approvers of that cruel and bloody band conjured against the Kirk of God." This "Con- fession" was formally adopted by James, with the assent of Edinburgh, 28 Jan., 1581; afterwards by the Presby- terian Assembly and by persons of all ranks. It re- mained for generations the spiritual pabulum which fortified the Scottish people against Papistry, until men began to think for themselves.

The Westminster Confession.—In the Reformed Churches of English speech, all the earlier standards were practically abrogated. The Westminster "Confession of Faith" and the "Longer" and "Shorter Catechisms", These documents, together with a "Directory of Worship", were the fruits of the long labours of the Westminster Assembly of Divines, con- vened in Westminster Abbey by authority of the Long Parliament at the opening of the Civil War. After the abolition of prelacy in September, 1642, the re- ligious condition of England was completely chaotic. In order to stem the evil, Parliament by an ordinance dated 12 June, 1642, "thought fit and necessary to call an Assembly of learned, godly and judicious divines, to consult and advise of such matters and things, touching the premises, as shall be proposed unto them by both or either of the Houses of Parliament, and to give their advice and counsel thereunto, in both or some of the said Houses, when, and as often as they shall be thereunto required." Last any of these invited "div- ines" should be tempted to dispute the omnipotence of Parliament, they are admonished that "this ordi- nance, or anything therein contained shall not give unto the persons aforesaid, or any of them, nor shall their In this Assembly assume to exercise, any juris- diction, power or authority, or any other power, than is herein particularly expressed". The ordinance provides that forty mem- bers shall constitute a quorum; "that William Twisse, Doctor in Divinity shall sit in the chair." Should he die, or be "letted, Parliament shall appoint his successor," Furthermore, "in case any difference of opinion shall arise between the members assembled, touching any of the matters that shall be proposed to them, as aforesaid, that they shall repre- sent the same, together with the reasons thereof, to both or either the said Houses respectively, to the end such further directions may be given therein as shall be requisite in that behalf," The ordinance mentions the remuneration to be paid to the divines; "but, as if these were not sufficiently muzzled, it adds ten lords and twenty commoners as "lay assessors". On 22 June, King Charles, from Oxford, issued a de-
cee condemning the proposed assembly, annulling beforehand all its proceedings, and prohibiting his subjects from taking any part in it. This had the consequence of keeping nearly all the Episcopalian away, thus placing the Puritans in supreme control. The assembly was formally opened in King Henry VII’s chapel in the historic abbey; but since no matter for discussion was submitted to the divines by the Parliament, and they were inhibited from taking the initiative, an adjournment was taken until the following week. On its second day of session, its assembly was ordered to revise the Anglican “Thirty-nine Articles”, for the purpose of simplifying, clearing, and vindicating the doctrines therein contained”. Ten weeks were devoted to this work; the divines had remodelled the first fifteen, when they were ordered to lay aside the “Articles” and engage in matters of more pressing importance to the Parliament. The war with King Charles was proceeding with disastrous results to the Parliamentary party. Success seemed possible only through the aid of the Scots.

Now the Scots demanded, as an indispensable condition of alliance, “the reformation of religion in the kingdoms of England and Ireland, in doctrine, worship, discipline and government, according to the Word of God”. This was one of the four demands of the “Articles of Union”. In other words, they insisted upon the adoption by the English of Presbyterianism in its integrity, a system repugnant to the national instincts and traditions of Englishmen. But there was no alternative, except the collapse of the rebellion. A “Solemn League and Covenant”, framed by the Presbyterian preacher, Henderson, was sworn and subscribed to by the divines of the “Assembly of Divines”. The Westminster assembly was a copy of this record. On 12 Oct., 1643, the Assembly received an order from the Lords and Commons to forthwith confer and treat among themselves, of such a discipline and government as may be most agreeable to God’s Holy Word, and most apt to procure and preserve the peace of the Church at home, and nearer agreement with the Church of Scotland and other Reformed Churches”. Although they rejected the Presbyterian form of Worship, or Liturgy, hereafter to be in the Church”, this order was the signal for protracted and at times bitter disputes between the Presbyterian majority and the Scottish commissioners on the one side, who advocated the adoption of the full Presbyterian machinery of Church government, and on the other the Independents and the Episcopalian, the former of whom argued for the complete independence of each separate congregation (see Congregationalism) while the latter opposed any kind of jurisdiction independent of the civil power. Although the Independent members numbered scarcely a dozen, and the Episcopalians were fewer still, their influence was vastly in excess of their numerical strength; for the Independents were in close touch with the Episcopalians and the Episcopalians could count on the sympathies of an English Parliament. Into the details of this debate, we need not enter. While it was still raging, an order was sent down to the Assembly “to frame a Confession of Faith for the three kingdoms, according to the Solemn League and Covenant”. This task presented no extraordinary difficulties; all the Puritan factions were as regarded matters of doctrine, more or less strictly Calvinistic, and there was not one Arminian in the assembly. Moreover, the Westminster divines had copious material to work upon in the numerous Reformed symbols already in existence. The Confession occupied their attention from 20 Aug., 1614, until 25 Sept., 1646, when the first nineteen chapters were sent to the Commons, and a few days later a duplicate copy was presented to the House of Lords. The Lords gave their assent to “The Humble Advice of the Assembly of Divines”, so the title ran; but the Commons refused to take definite action until they had the complete Confession before them. This took place on 4 Dec., 1646. A limited number of copies was printed for the use of the Parliament and the assembly; but the House of Commons, probably to gain time, demanded that each section should be supported by Scriptural text. This was done by the divines (29 April, 1647); whereupon the Commons ordered 600 copies, “and no more”, to be printed. This edition was received as authoritative by the Scottish Church and Parliament, and was regarded by Presbyterians generally as their authentic Confession of Faith. But in the eyes of the Erastian Parliament of England, it was simply “The Humble Advice of the Assembly of Divines”, convoked by its authority, and valueless without its sanction. After intermittent discussions, which extended above a year, the Parliament, 20 June, 1648, ordered an expurgated edition to be printed by its authority, in which every reference to the spiritual jurisdiction of the Church is carefully eliminated.

As to its contents, the Westminster Confession of Faith, is the most elaborate, as it is the latest of the Reformed creeds. In thirty-two chapters, divided into sections, it labours to give a full and logical exposition of Christian doctrine as understood by the Reformed Churches. Chap. i, “Of the Holy Scripture” gives a list of the inspired books, including the deuterocanonical books of the Old Testament and rejecting the “Apocrypha” of the Old. “The authority of the Holy Scripture, for which it ought to be believed and obeyed, dependeth not upon the authority of any man or church, but wholly upon God”. The Supreme Judge by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, doctrines of men, and private spirits, are to be examined, and in whose sentence we are to rest, can be no other but the Holy Ghost speaking in the Scripture.” Chap. ii repeats the ancient doctrine “Of God and of the Holy Trinity”. Chap. iii, “Of God’s Eternal Decree”, teaches that “God from all eternity did, by the most wise and holy counsel of His own will, freely and unchangeably ordain what shall come to pass in time concerning men and things, according to the decree of His will,uttering no word to His angels or posterity concerning the same, except so far as it was necessary that His angels or posterity should know them.” The elect, who fell in Adam, are redeemed by Christ, effectually called and eventually saved; but “neither are any other redeemed by Christ, effectually called, justified, adopted, sanctified and saved, but the elect only. The rest of mankind God was pleased, according to the unsearchable counsel of His own will, freely to give to them to fall into the hands of the living God.” The elect, in His grace, are holden mercy as He pleaseth, for the glory of His sovereign power over His creatures, to pass by, and ordain them to dishonour and wrath for their sin, to the praise of His glorious justice.” The “Confession” judiciously warns the preachers that “the doctrine of this high mystery of predestination is to be handled with special prudence and care”. Chap. v, “Of Providence”, we find the unintelligible utterance, evidently having in view the Supralapsarians, that God’s providence “extendeth itself even to the first fall, and all other sins of angels and men, and that not by a bare permission, but such as hath joined with it a most wise and powerful bounding”. Chap. x, “Of Effectual
Faith, the Rule of. — The word rule (Lat. regula, Gr. ἱκανόν) means a standard by which something can be tested, and the rule of faith means something external to one's own reason or will. Since faith is Divine and infallible, the rule of faith must be also Divine and infallible; and since faith is supernatural assent to Divine truths upon Divine authority, the ultimate or remote rule of faith must be the truthfulness of God in revealing Himself. But since Divine revelation is contained in the written books and unwritten traditions (Vatican Council, I), this rule and the Divine truths to which it attests are one and the same. Thus, since faith is not the mere assent of the intellectual faculty, it must be understood as the moral act of the whole person. The Rule of Faith is the Canon of Scripture and the Deposit of Faith.

The Reformers were unanimous in declaring the Bible to be the sole rule of faith. “We believe their cult and the universality with which their names are found not only in the various early martyrologies of the Western Church, but also in the Menologia and Menologios of the Greeks, render the fact of their existence and martyrdom unquestionable. Setting aside the purely legendary accounts that have come down to us (see Aligne, P. G., CXV, 497; Mommsen, Vitea Sanctorum, II, 201), we find that in the reign of Hadrian, a Roman matron Sophia (Wisdom), with her three youthful daughters, Pistas, Elpis, and Agape (Faith, Hope and Charity), underwent martyrdom for the Faith and were interred on the Aurelian Way, where their tomb in a crypt beneath the church afterwards erected to St. Pancreas was long a place of resort for pilgrims, as we learn from various indubitable documents of the seventh century, such as an Iterarium (or guide to the holy places of Rome compiled for the use of pilgrims) still preserved at Salzburg, the list, preserved in the cathedral archives of Monza, of the oils gathered from the tombs of the martyrs and sent to Queen Theodolinda in the time of Gregory the Great, etc.

Later surely than the reign of Hadrian, but at what time is uncertain, another band of martyrs, Sapientia (Wisdom) and her three companions, Spes, Fides and Caritas (Hope, Faith and Charity), suffered death and were buried near the tomb of St. Cecilia in the cemetery of St. Callistus on the Appian Way. Despite the carelessness of the Church, no accurate data of the places of sepulture are given. Evidence in the documents cited to a band of martyrs, mother and daughters, whose names are always given in Greek, and who are buried on the Aurelian Way, to another band of four martyrs, interred on the Via Appia, whose relationship is not indicated and whose names, though the same as those of the martyrs of the Aurelian Way, are yet always given in Latin, contain no proof of their Gentile character. However, the reference in the documents cited to a band of martyrs, mother and daughters, whose names are always given in Greek, and who are buried on the Aurelian Way, to another band of four martyrs, interred on the Via Appia, whose relationship is not indicated and whose names, though the same as those of the martyrs of the Aurelian Way, are yet always given in Latin, contain no proof of their Gentile character.

For numbers of the Westminster Standards, viz., the Confession and the Catechisms, were common names in early Christian inscriptions and martyrologies. The Roman martyrologies, names, on 1 Aug., the holy virgins, Faith, Hope and Charity, who won the crown of martyrdom under the Emperor Hadrian" and, on 30 Sept., "St. Sophia, widow, mother of the holy virgins, Faith, Hope and Charity". In some places, on 1 Aug., St. Sapientia is also venerated; but generally, owing to the confusion of the two groups, none of the second group receives special recognition.

In the Eastern Church the feast is kept on 29 Sept., A.D. 1., X., XXXV, 16; de Rossi, Roma Sotterranea, 1, 182; 2, 171 (Rome, 1864); Allard, Histoire des perpétuums pendant les deux premiers siècles (Paris, 1885-), 221.

JNO. F. X. MURPHY.
that the only rule and standard by which all dogmas and all doctors are to be weighed and judged, is nothing else but the prophetic and apostolic writings of the Old and New Testaments" (Form. Conciliorum, 1577). But men had already perceived that the Bible could not be left to interpret itself, and in 1571 Convocation put forward what was, perhaps unwittingly, a double rule of faith: "preachers", they say, "shall see with the eye of faith, and never listen to anything except what is agreeable to the doctrine of the Old and New Testament, and what the Catholic Fathers and ancient Bishops have collected out of that very doctrine" (Wilkins, "Concilii", IV, 267). Convocation thus not only laid down that the Bible was the rule of faith, but insisted upon its inanimate character as a witness to the Faith, for they declared the early Church never consented to any infallibility in their prudence, or in their own teaching, but that they were themselves exercising church authority. A somewhat different doctrine appeared in the Westminster Confession of Faith (1643-7), which declared that the "Books of the Old and New Testaments are...given by inspiration of God, to be...the rule of faith and life" (art. ii), but that the "authority of the Holy Scriptures is not...in the testimony...of any man or church" (art. iv). They add: "We may be moved by the testimony of the Church to a high and reverent esteem of the Holy Scripture...yet our full persuasion of the infallible truth and divine authority thereof is from the inward work of the Holy Spirit, hearing witness by and with the word in our hearts" (art. v). That is, a man's assent to the Bible is based, in the judgment of each individual, moved by the assistance of the Holy Spirit, is the proximate living rule of faith. But apart from its solvent effect upon any true view of the Church, it is easy to see that such a rule could never serve as an infallible interpreter of the inanimate rule, viz., the Bible. For where does the Bible ever testify to the inspiration of certain books? And what hands does it assign to be canonical? Moreover, the inward work of the Holy Spirit, being purely subjective, can never be a decisive and universal test of doctrinal divergences or critical views; thus Luther himself termed St. James's Epistle an "epistle of straw." The fruits of this principle are everywhere apparent in Protestant Biblical criticism. "The Reformation theologians treated Paul as the one of the twelve apostles, and so the Reformers do the same. In Nearn and Godet Paul is a pectoral theologian, in Ruckert a pious supranaturalist, in Baur a Hegelian, in Luthardt orthodox, in Ritsch h a genuine Ritschlian" (Expository Times, 1904, p. 304). In practice, however, the Reformed Churches have never acted up to the principle of private judgment, but have, in one form or another, urged the authority of the Church in deciding the contents of the Bible, its inspiration, and its meaning.

II. THE CHURCH AS THE RULE OF FAITH.—This follows necessarily from any adequate view of the Church as a Divinely constituted body, to whose keeping is entrusted the deposit of faith, but the grounds for this doctrine may be briefly stated as follows:—

(1) It is Christ who sent the Disciples to command to write, but only to teach: "going therefore, teach ye all nations...teaching them to observe all things whatsoever I have commanded you" (Matt., xxviii, 19-20). "As the Father hath sent me, I also send you" (John, xx, 21). And in accordance with this, the Church is everywhere presented to us as a living and unifying society composed of the teachers and the taught. Christ is in the Church, and is its Head; and He promised that the Holy Spirit should be with it and abide in it. "He will teach you all things, and bring all things to your mind, whatsoever I shall have said to you" (John, xiv, 26). Hence St. Paul calls the Church "the pillar and ground of the truth" (1 Tim., iii, 15; cf. Mark, xvi, 16; Rom., x, 17; Acts, xv, 28).

(2) Tradition.—The same doctrine appears in the writings of the Fathers of every age; thus St. Ignatius (ad Traul., vii), "Keep yourselves from heretics. You will be able to do this if you are not puffed up with pride, and (so) separated from(our) God, Jesus Christ, and from the bishop, and from the precepts of the Apostles. He who is within the altar is clean, he who is without is not clean; that is, he who acts any way without the bishop, the priestly ordination, and the ceremonies, is not clean in conscience," And St. Irenæus ("Adv. Haer.", III, iii) says, of heretics, that "not one of them but feels no shame in preaching himself, and thus depraving the rule of faith" (τὸν τῆς ἀγαθῆς καθόμος); and again (III, iv), "it is not right to seek from others that truth which it is easy to get from the Church, since the Apostles poured it into the Church, directly and explicitly, and the Church is the body of the faithful, who belong to the truth, so that whosoever desires may drink thereon the draught of life". A little further on, he speaks (V, xx) of the "true and sound preaching of the Church, which offers to the whole world one and the same way of salvation". Such testimonies are countless; here we can only refer to the full and explicit teaching which is to be found in Tertullian's "Apologies" against those who "call themselves Hetero
dius Hæreticorum", and in St. Vincent of Lérins' famous "Commonitorium". Indeed St. Augustine's well-known words may serve as an episteme of patristic teaching on the authority of the Church. "I would not believe the Gospels unless the authority of the Catholic Church moved me thereby" (Contr. Ep. Fund., V). If we could be noble, especially within the Church of Tertullian and St. Irenæus, use the term "tradition" not merely passively, viz., of orally bestowed Divine teaching, but in the active sense of ecclesiastical interpretation. And this is undoubtedly St. Paul's meaning when he tells Timothy to uphold "the form of sound words which thou hast heard from me" (II Tim., i, 13). It is in this sense that the various formulæ of faith, of which we have the earliest sample in I Cor., xv, 3-4, became the rule of faith.

(3) Theologians.—The teaching of the Church's Doctors on this point has ever been the same, and it will suffice if we quote two passages from St. Thomas, who, however, has no such treatise on a question which he took for granted. The formal object of faith", he says, "is the First Truth as manifested in Holy Scripture and in the Church. The Church can declare what she sees, does not and can never decide any thing in opposition to the Teaching of the Church's teaching, which proceeds from the Church's truth manifested in Holy Scripture, such an one has not the habit of faith, but holds the truths of faith not by faith but by some other principle" (II-II, Q. v, a. 3). And still more explicitly when (Quodl., ix, art. 16) he so states, whether canonized saints are necessarily in heaven, he says, "It is certain that . . . the judgment of the universal Church cannot possibly err in matters pertaining to the faith; hence we must stand rather by the decisions which the popes judicially pronounce than by the opinions of men, however learned they may be in Holy Scripture."
rolled back". The Church alone can tell us how we
are to interpret the words "This is My Body", for
she alone can say, "He Who spoke those words speaks
through me, He promised to be with me all days, He
pledged Himself to safeguard me from error at all
times".

III. IN WHAT SENSE IS THE CHURCH THE RULE OF FAITH?—(1) All non-Catholic systems have felt the
need of some such authoritative rule as that sketched
out above, and the history of Anglicanism practically
resolves itself into a series of attempts to formulate a
theory which shall, while avoiding the Seylla of Rome,
enable the Church of England to escape the Charybdis
of dissolution. This has never been more painfully
evident than at the present day, when the destructive
Biblical criticism has compelled men to look for some firmer standing ground than the Bible
alone. But in formulating their various theories, non-
Catholic theologians have never seemed to realize the
absolutely vital character of the question at issue,
and have contented themselves with illogical views,
which have done more to alienate thinking men than
the direct and unveiled assaults of infidels and agnosi-
stics. At the Reformation the only authority de-
serving of the title was overthrown, and since then
men have been seeking, at all costs, to replace it by
some form other than that of the Apostolic Church,
from which they cut themselves adrift. All the
sects are seeking an active rule of faith; the High
Church plumbs the foundations of a Holy Church of
the Low Church in what we may term the spiritual intu-
tions of the illuminated soul; the Broad Church does
the same, but refuses to be bound by any dogmatic
formule, and regards the Bible as no more than the
best of all inspired books; and lastly the Ritualists
appeal to the testimony of the Living Church, but
narrowly confines that testimony to such testative
evidence as is found in "our unhapppy divisions" which preclude the assembling of a truly
representative council. The Low Church and the
Broad Church content themselves with a purely sub-
jective criterion of truth; the High Church with one
which itself needs interpreting; and the Ritualists looks
to "the Church of the future", he clings to the illusory
"branch theory", but forgets that none of the Churches
he calls "branches" accepts the designation.

(2) Modernism.—There has of late years arisen,
within the pale of the Church, a school of theologians
who make appeal to the conscience of the invisible
Church rather than to any conciliar gathering, and ap-
pear to neglect entirely what theologians term the
quotidiana majestas of the Church. Thus, the live-
ly protest against the destruction of Biblical literalism
by distinguishing the pre-Church or infallible formless church from the governmental form, which it has now elaborated for
its own apostolic needs" (Seylla and Charybdis, 49).
He would even make this formless church the rule of
faith. "Authority is something inherent in,
and inalienable from, that multitude itself; it is the
cornerstone of the building, it is the weight of
truth, it is the weight of the Church, it is the
immanence of the Church, it is the impera-
tiveness of the collective conscience" (op. cit., 376).
Such doctrine inevitably leads to the individual soul as the
ultimate criterion of religious truth, as is forcibly
pointed out in the Encyclical "Pascendi". But the
most remarkable feature of Modernism is its return to
the form of the primitive Church, but not only on the
pre-eminance of the Bible, but on the independence of
Biblical critics. In the Syllabus, "Lamentabili Sane", Pius X has condemned such
views as that the opinions of Biblical exegetes are be-
jond the jurisdiction of the Church (props. i-ii, and
lx); that the teaching office of the Church does not
extend to a determination of the sense of Holy Scrip-
ture (prop. iv); that the office of the Church is merely
to ratify the conclusions arrived at by the Church at
large (prop. vi); and that the Church's dogmas are
often in conflict with the plain teaching of the Bible
(props. xxxii-xxiv, and lx1).

(3) The Catholic Doctrine Touching the Church as the
Rule of Faith.—The term Church, in this connex-
ion, can only denote the teaching Church, as is clear from
the passages already quoted from the New Testament
and the Fathers. But the teaching Church may be
regarded either as the whole body of the episcopate,
whether scattered throughout the world or collected
in an ecumenical council, or it may be synonymous
with the successor of St. Peter, the Vicar of Christ.
Now the teaching Church is the Apostolic body con-
tinuing to the end of the world (cf. 1 Tim. 3:16); and
only one of the bishops, viz., the Bishop of Rome, is
the successor of St. Peter; he alone can be regarded as
the living Apostie and Vicar of Christ, and it is only
by union with him that the rest of the episcopate can
be said to possess the Apostolic character (Vatican
Council, Sess. IV, Procanum). Hence, unless they be
united with the Vicar of Christ, it is futile to appeal to
the episcopate in general as the rule of faith. At the
same time, it is clear that the Church may derive
from the conflicting views of the Doctors a clearer
knowledge of the Deposit of Faith committed to her,
for as St. Augustine pointedly asked, when treating of
the re-baptism question, "how could a question which
had become so obscured by the dust raised in this
controversy, have been brought to the Church and
resolved in so brief and final a manner, and dis-
cussed throughout the world in disputations and con-
ferences held by the bishops?" (De Baptismo, ii, 5).
Thus the appeal of the Ritualist to a future council,
that of the Modernist to the conscience of the uni-
versal Church, and that of the High-Churchman to the
primitive Church, are, besides being mutually exclu-
sive, destructive of the doctrine of the Church as the
"pillar and ground of truth". If the Church is to
exercise her prerogative, she must be able to decide
promptly and infallibly any question touching faith
or morals. Her conciliar utterances are rare, and
though they are weighty with the majesty of ecu-
menical testimony, the Church's teaching is by no
means confined to them. The Vicar of Christ can,
whenever necessary, exercise the plenitude of his au-
thority, and when he does so we are not at liberty to
say, with the Jansenists, that he has not done justice
to the views of those he condemns (cf. Alex. VII,
"Ad Saernam", 1656); nor can we take refuge, as did
the later Jansenists, and as the Modernists appear to
do, in obscure silence, as opposed to heartfelt sub-
mission and mental acceptance of such pronounce-
ments by the supreme pastor of the Church (cf. Clem.
VII, "Vineam Domini", 1705; and Pius X, "Lamentabili
Sane", 1907, prop. vii). When Newman was re-
ceived into the Church, he penned those famous lines
which form the conclusion of the "Essay on Develop-
ment": "Put not from you what you have here
found; regard it not as mere matter of present con-
venience, so that you may hereafter wish to refute it,
and looking out for the best way of doing so; seduce not
yourself by the imagination that it comes of disappointment, or
disguise, or restlessness, or wounded feeling, or undue
sensibility, or other weakness. Wrap not yourself
round in the associations of years past, nor determine
that to be truth which you wish to be so, nor make
an idol of cherished anticipations. Time is short,
early autumn is at hand; and what is "the Church"?

HUGH F. POTEY.

Faithful (Lat. fides, from fide, faith), The, those who have bound themselves to a religious association, whose doctrine they accept, and into whose rites they have been initiated. Among Christians the term is applied to a candidate for baptism and, regularly speaking, by confirmation. Such have engaged themselves to profess faith in Jesus Christ, from whom they received it as a gift; henceforth they will proclaim His teaching, and live according to His law. Hence the term so frequent in papal documents, Christifides, "the faithful of Jesus Christ". The distinction between Christians and faithful is not a very strict one, because the Christian has become the exception, but also because liturgically the rite of the catechumen and that of baptism have merged into one another. On the other hand, in the Latin Church at least, confirmation and first Communion have been separated from the baptismal initiation. In the primitive Church it was otherwise: initiation into the Christian society consisted in two distinct acts, and baptism was, and still is, the act by which baptism itself, was he authorized to call himself one of the Christian faithful, and to participate immediately in all the Christan mysteries, including the Eucharist.

Strictly speaking, therefore, the term faithful is opposed to catechumen; hence, it is not met in the writings of those early Christian Fathers who flourished before the organization of the catechumenate. It is not found in St. Justin nor in St. Irenæus of Lyons; Tertullian, however, uses it, and reproaches the heretics for obliterating all distinction between catechumens and the faithful: quis catechumenus, quis fidelis incorruptus est (De prescr., c. xiii, P. L., II, 50). Henceforth, in the patristic writings and the canons of councils we meet quite frequently the antithesis of catechumens and baptized Christians. But the act of baptism, by baptism itself, was he authorized to call himself one of the faithful, and to participate immediately in all the Christian mysteries, including the Eucharist. Strictly speaking, therefore, the term faithful is opposed to catechumen; hence, it is not met in the writings of those early Christian Fathers who flourished before the organization of the catechumenate. It is not found in St. Justin nor in St. Irenæus of Lyons; Tertullian, however, uses it, and reproaches the heretics for obliterating all distinction between catechumens and the faithful: quis catechumenus, quis fidelis incorruptus est (De prescr., c. xiii, P. L., II, 50). Henceforth, in the patristic writings and the canons of councils we meet quite frequently the antithesis of catechumens and baptized Christians. But the act of baptism, by baptism itself, was he authorized to call himself one of the faithful, and to participate immediately in all the Christian mysteries, including the Eucharist.

A. BOUDINON.

Faithful Companions of Jesus, Society of the, a religious institute of women founded by the Viscountess de Bonnault d'Houet in 1820 at Amiens,
France. It was solemnly approved by Gregory XVI, 5 Aug., 1837.

The Faithful Companions of Jesus are devoted to the education of all classes, adapting themselves to the special educational needs of each country. In 1803 the society possessed sixty convents in France, Italy, Switzerland, England, Ireland, Scotland, Australia, Canada, and the United States. The religious persecution in France, with the consequent closing of the French houses, has been the cause of new foundations in Belgium (at Brussels, Graty, and Namur), also in the Isle of Guernsey, and at Fribourg, Switzerland. The society is governed by a superior general who, up to the time of the religious persecution in France, resided at the mother-house in Paris; the home of the superior general is at present in Namur, Belgium. The society numbers about 1,200 religious, who in England, Ireland, Scotland, and Australia conduct about 60 grammar and high schools, technical schools, science and art schools. The new training college for teachers at Sedgley, near Manchester, England, has met with great success. In the United States the sisters have charge of about one thousand children attending St. Joseph's parochial school at Fitchburg, Mass. They also have an academy where high school branches are taught. A small foundation has recently been made at Gilbertville, Mass. In the United States there are 46 sisters, 4 novices, 2 schools, and 1 high school. The society now possesses thirty-two convents. The novitiates are at Namur, Belgium, Upton Hall, near Liverpool, England, Limerick, Ireland, and Fitchburg, Mass.

SISTER MARY PHILOMENA.

Falco, Juan Conchillos, painter, b. at Valencia of an ancient noble family in 1611; d. 14 May, 1711. He was born in Valencia in March, the eminent but enigmatic Valencian painter, and was one of the first Spanish artists to start and maintain a school of design, gathering about him various youthful artists and insisting upon their working in charcoal in order to obtain freedom of draughtsmanship. He was a brilliant sketcher and in his journeys through his native country made some clever and humorous pencil drawings of scenes which he took on the road. Falco is almost the only Spanish artist of whom it can be said that he had a keen sense of humour, but he is further described by his contemporaries as "the most amiable of men, humble, modest, a model of virtue, and altogether of the stuff whereof angels are made". Two of his most important works were those executed for the church of San Salvador in Valencia; others are the "Immaculate Conception," painted for the Franciscans in the same city, the frescoes in the church of San Juan, and the two altar-pieces of the Cistercan monastery of Valdigna. The close of his life was full of sadness. He was suddenly struck with palsy and became a confirmed cripple. Soon after that he lost his sight and died completely blind.

Falconieri, Juliana, Saint. See Juliana Falconieri, Saint.

Faldistorium (Faldestolum). See Faldstool.

Faldstool (Lat. faldistorium; also facidiorium, faudelolus, faudelota), a movable folding chair used in pontifical functions by the bishop outside of his cathedral, or within if he is not at his throne or cathedra. Other prelates also enjoyed the privilege of fullySouthern use it. The rubrics prescribe its use as a seat in the conferring of baptism and Holy orders, in the consecration of oils on Maundy Thursday, at the ceremonies of Good Friday, etc. It is prescribed as a genuflectarium at the door of the church at the solemn reception of a bishop, at the altar of the Blessed Sacrament, and before the high altar. Red, green, and violet cloths are ordered as a covering to correspond to the season of the year or the rank of the prelate. It may have been invented like a campstool and it accompanied the bishop in his journeys. Materials, even the most costly, were employed in its construction; one wrought of gold and jewelled was presented to Pope Clement IV by Charles, King of Naples. Some were made of silver, of gilt metal, of ebony, or of wood. They were sometimes elaborately carved, ending in clawlike feet, the four corners at the top representing the neck and head of animals. Cloths of silk of a rich texture with gold and silver served to cover them. A faldstool is prescribed by the old English Ritual in the consecration of a Bishop of the Church of England, Bishop of Durham (d. 1105), we are told that on taking the cross for the holy war he had made among other things to carry along with him a magnificent silver chair.

Falkenberg, John of. See John of Falkenberg.

Falkner, Thomas, b. 6 Oct., 1707; d. 30 Jan., 1784. He was the son of Thomas Falkner, a Manchester apothecary, and obtained his education at the Manchester grammar school. Later on, having studied medicine under the well-known Dr. Richard Mead, he became a surgeon and practised at his native place. His own health being delicate, he was advised to take a sea-voyage, and being acquainted with a ship captain, he presented him with the "Instructions" of a vessel trading with Guinea and carrying slaves thence to Buenos Aires, he accepted an invitation to accompany the vessel as surgeon. This was in or about 1751. On reaching Buenos Aires he was so ill that the captain was compelled to leave him there in the care of Father Mahoney, the superior of the Jesuit College. Here he not only recovered his health, but was received into the Church, and on 15 May, 1752, entered the Society of Jesus, becoming a member of the Paraguay province. Having spent some time at the Jesuit College of Cordoba de Tucuman, he went as a missionary to the Pueblos, near Rio Legundo. His knowledge of medicine and mechanics procured for him considerable influence among the Indians, and in 1740 he was sent to assist Father Strzelb in his successful mission to the Patagonian Indians at Cape San Antonio. For more than thirty years he laboured among the Patagonians until 1768 when the Jesuits were expelled from South America. He then returned to England where, in 1771 or 1772, he joined the English province of the Society. He was appointed chaplain to Mr. Berkeley of Spetchley, and here, in addition to his priestly labours, he wrote an account of his Patagonian experiences, which was published at Hereford in 1774 under the title "A Description of Patagonia and the adjoining parts of South America, with a grammar and a short vocabulary, and some particulars relating to Falkland's Islands". The book as published was not
his original work, but a compilation by William Combe, who used Falkner's papers. Kirk (see below) quotes a remark by Rev. Joseph Berington: "Mr. Falkner was a man of a vigorous mind, well exercised in various points of science, and had he been allowed to tell his story in his own way, stored as his mind was with anecdotes and incidents, on which he enforced his opinions, he had doubtless given amusing and interesting performance. But his papers were put into the hands of the late Mr. Robert Berkeley of Spetchley, who extracted from them the whole spirit of the original. He made them what they are."

But though Mr. Berkeley wrote the preface, the responsibility for the taming process must rest with Combe. Even in its emasculated form the book was successful, and was translated into German, French, and Spanish. Another account of the Patagonians due to Father Falkner is found in the works of Thomas Pennant, who described his essay as "formed from the relation of Fr. Falkner, a Jesuit, who had resided among them thirty-eight years". On leaving Spetchley, he became chaplain to Mr. Berington of Winsley in Herefordshire, and afterward to the Dowmans of Plowden Hall in Shropshire. After his death, which occurred at the latter place, the Spanish Jesuits, who had known him in South America, were very anxious to obtain his unpublished works, which included treatises on the botanical and mineral products of America, and "American distempers as cured by American drugs". It is stated by Fr. Caballero, S. J., that he had also edited "Volumina due de anatomia corporis humano".

Edwin Burton.

Fall, The. See Sin.

Fall River, Diocese of (Riverrormensis), U. S. A., a suffragan see of the province of Boston, comprises the counties of Bristol, Barnstable, Dukes, and Nantucket, with the towns of Marion, Mattapoisett and Wareham in Plymouth county, Massachusetts, an area of 1194 square miles. It is the southernmost division of the Diocese of Providence, which has included the entire State of Rhode Island and a portion of south-eastern Massachusetts, and has the distinction of being the first diocese erected by Pope Pius X. The total population of the diocese is 309,438, of which 151,633 are Catholics. Among the latter are Americans, Irish, French-Canadians, Portuguese, Poles, and Italians. The heavy immigration in years past of the Irish and French-Canadian people has caused them to far outnumber the Catholics of other nationalities; but this immigration is now at a standstill, while that of Portuguese and Poles is steadily on the increase. The diocese, by reason of recent creation, has no history of its own. The following is included in the history of the Dioceses of Boston, Hartford, and Providence (q. v.), in each of which its territory has successively been included.

William Stang, the first bishop, was born in 1854 in Langenbrücken, in the Grand Duchy of Baden, Germany. His early education was received in the gymnasium of his native town and at the St. Nicholas College. In October, 1875, he began the study of theology at the American College, Louvain, Belgium, where he was ordained priest in 1878. In September of the same year he emigrated to America, to labour in the Diocese of Providence, where his first assignment was to the cathedral. In 1884 he assumed charge of St. Ann's parish, Cranston, Rhode Island. Shortly after he was named few Greek and Syrians, chancellor of the diocese, positions which he ably filled until 1895. In April of that year he went to Louvain to become vice-rector of the American College. Georgetown University, in 1887, had conferred upon him the degree of doctor of theology; but a greater recognition awaited him. In August, 1898, the Belgian bishops as the governing board of the University of Louvain, to which the American College is affiliated, named him professor of fundamental moral theology in the schola minor of the university. In April, 1899, he returned to Providence, to become head of the diocesan Apostolate Band. While still head of the latter, in 1901, he was made pastor of St. Edward's church, Providence, and on 12 March, 1904, he was appointed bishop of the newly erected See of Fall River. His consecration took place in the cathedral. Bishop Berington, in his first two years and nine months he proved himself to be a zealous, indefatigable worker, and charitable to an extreme. He died 2 February, 1907, in St. Mary's Hospital, Rochester, Minnesota. Bishop Stang was the author of a number of works, notably: "Pastoral Theology" (1896); "Historiographia Ecclesiastica" (1897); "Business Guide for Priests" (1899); "Pepper and Salt" (1901); "Socialism and Christianity" (1905); "Medulla Fundamentalis Theologiae Moralis" (1906). He also left many pamphlets and essays and contributed frequently to the "American Ecclesiastical Review".

Daniel Francis Feehan, the second incumbent of the see, was b. in 1855, at Athol, Massachusetts. His classical and philosophical studies were pursued in St. Mary's College, Montreal, Canada, from which he graduated in June, 1876. During the three following years he studied theology at St. Joseph's Seminary, Troy, New York, where he was ordained priest 20 December, 1879. Parish work in West Brighton and Fitchburg in the Diocese of Springfield engaged his energies until 1889, when he was made permanent rector of St. Bernard's College, and as such when, on 2 July, 1907, he was appointed second Bishop of Fall River, and consecrated 19 September following.

The diocese has a well-equipped educational system. There are 28 parochial schools with a staff of 191 teachers and an enrolment of 10,451 pupils, 4464 boys and 5987 girls. There are three convent boarding schools conducted by the Dominican Fathers, the Sisters of the Sacred Hearts, the Sisters of St. Dominic, and the Sisters of Jesus and Mary, respectively. A boarding college for boys and young men pursuing classical and commercial courses is under the guidance of the Fathers of the Sacred Heart. The Christian Brothers have a well-established commercial day school with a register of 363 pupils. An industrial school for girls is conducted by the Franciscan Missionary Sisters of Mary.

Charity is also well organized. A large hospital, St. Ann's, at Fall River, is presided over by the Dominican Sisters of Charity of the Presentation. Three orphan asylums directed by the Sisters of Mercy, the Sisters of Charity (Grey Nuns), and the Sisters of St. Francis, respectively, shelter 600 orphans. In conjunction with one of these asylums is maintained a home for the aged. Admirable work has also been done by the St. Vincent de Paul Society.

There are 108 secular and 20 regular priests labouring in the diocese. Of the secular clergy 57 are English-speaking, 30 French-speaking, 15 Portuguese, 5 Polish and 1 Hungarian. The Dominican Fathers of the Sacred Hearts, and the Christian Brothers have communities, as also have the sisters of Charity (Grey Nuns), Dominican Sisters of Charity of the Presentation, Sisters of St. Dominic, Felician Sisters, Franciscan Missionaries of Mary, Sisters of the Holy Ghost, Sisters of Holy Cross and Seven Dolours, Religious of the Holy Union of the Sacred Hearts, Sisters of Jesus and Mary, Sisters of Mercy, Sisters of St. Joseph (Le Puy), and Sisters of St. Francis.
Edward J. Carr.

Fallopio, Gabriele, anatomist, "one of the most important of the many-sided physicians of the sixteenth century" (Haesser); b. at Modena, Italy, 1523; d. 9 October, 1562, at Padua. He was born to wealthy parents, his father being a jurisconsultus, but contemporary authority is for the date mentioned. His family was noble but very poor and it was only by a hard struggle he succeeded in obtaining an education. He studied medicine at Ferrara, at that time one of the best medical schools in Europe. After taking his degree he worked at various medical schools and then became professor of anatomy at Ferrara in 1548. He was called the next Vesalius, and though not as famous as his successor, his writings on medical subjects, especially in anatomic and surgical fields, are still of value. He published one of the first systematic works on anatomy, De Humani Corporis Fabrica (1543). In 1546 he was made professor of anatomy in Pisa, the second most important university in Italy. In 1551 Fallopio was invited by Cosmo I, Grand Duke of Tuscany, to occupy the chair of anatomy and surgery at Padua. He held also the professorship of botany and was superintendent of the botanical gardens. Though he died when less than forty, he had made his mark on anatomy for all time. This was the golden age of anatomy and Fallopio's contemporaries included such great anatomists as Vesalius, Eustachius, and Columbus. It has sometimes been asserted that he was jealous of certain of the great discoverers in anatomy and that this is the reason for his frequent criticisms and corrections of their work. Haesser, whose authority in medical history is very high, says that Fallopio was noted for his meekness and deference to his fellow-workers and especially to Vesalius. His purpose in suggesting corrections was the advance of the science of anatomy. Fallopio's own work dealt mainly with the anatomy of the head. He added much to what was known before about the internal ear and described in detail the tympanum and its relations to the ossesous ring with which it is surrounded. He also described the circular and oval windows (fenestrae) and their communication with the vestibule and cochlea. He was the first to point out the connexion between the mastoid cells and the middle ear. His description of the lachrymal passages in the eye was a marked advance on those of his predecessors and he also gave a detailed account of the blood vessels in the head and neck. His contributions to the anatomy of the bones and muscles were very valuable. It was in myology particularly that he corrected Vesalius. He studied the organs of generation in both sexes, and his description of the canal or tube which leads from the ovary to the uterus attached his name to the structure. Another structure, the little canal through which the facial nerve passes after leaving the auditory, is also called after him the aqueductus Fallopian. He was much more than a discoverer in anatomy. His contributions to practical medicine were important. He was the first to use an auricular speculum for the diagnosis and treatment of diseases of the ear. His writings on surgical subjects are still of interest. He published two treatises on ulcers and tumors; a treatise on surgery and cutaneous anatomy on Hippocrates's book on wounds of the head. His treatise on syphilis is wonderful in its anticipation of what is sometimes thought most modern in this subject. Fallopio was also interested in every form of therapeutics. He wrote a treatise on baths and thermal waters, another on simple purgatives, a third on the composition of drugs. None of these works, except his anatomy (Venezia, 1561), was published during his lifetime. As we have them they are from the manuscripts of his lectures and notes of his students. They were published by Koyter (Nuremberg, 1575).

James J. Walsh.

Faloux du Coudray, Frédéric Alfred Pierre, Vicomte de, b. at Angers, 7 March, 1811; d. there 6 Jan., 1885. Two persons are largely responsible for the moulding of his character, his mother, who was at the court of Louis XVI, and Madame Swetchine, whose "Life and Letters" he later published. The first works by which he drew attention to himself revealed the future statesman as a man of unyielding principles. His "Histoire de Louis XVI" (Paris, 1830) exhibits him as a staunch monarchist; in it he maintains that the needed reforms could have been accomplished by the monarchy without the Revolution. He was next called to the "Histoire de Saint Pie V" (Paris, 1844) ably sustains the traditional thesis that the Church may use coercion to prevent the spread of heresy. Nevertheless, in less than ten years this partisan of monarchy took office under President Adolphe Thiers as Director of the Sénat. As a defender of the coercive authority of the Church was ranked among "Liberal Catholics". To take advantage of opportunities was henceforth de Faloux's maxim as a practical statesman.

Under the monarchy de Faloux was elected (1846) deputy for Segré on a legitimist platform; in 1848 he was chosen a member of the French National Assembly as a representative of Maine et Loire, on a platform which supported the social aspirations of the time as compatible with Christian ideas. It was at his suggestion that the Catholic members helped to elect Buache president of the assembly. To de Faloux, as mouthpiece of the committee charged with the question of investigating the "national workshops", was assigned the perilous duty of exposing their abolition; this measure was followed by the bloody insurrection of June. Those who blame him for this action overlook the fact that he was neither the first nor the only one to insist on this inevitable measure and unjustly attribute to him a Machiavellian scheme by which, in the interest of his religious policy, he sought to goad the advanced parties to compromise their cause by disorder and rioting. As a matter of fact the sight of these excesses brought home to Thiers the necessity of moral restraint as a part of education, and thus he led de Faloux to collaborate with him in promoting the educational projects of the latter. Minister of Education from December, 1848, until 31 October, 1849, de Faloux immediately determined to push vigorously against the educational monopoly of the university which Montalembert had begun during the last years of the July monarchy. As early as 4 Jan., 1849, de Faloux appointed an extra parliamentary commission to further this scheme in the legislature and in June, 1849, while the advanced parties were still smarting under the sense of defeat, he strongly advocated the passage of a law establishing liberty of instruction. The assembly, however, voted against it, since the bill had not the approval of the Council of State. It was only during the ministry of 1850, in which de Faloux had not a seat, that on 15 March his successor Pariou, with the help of Thiers and Dupanloup, and despite the opposition of Victor Hugo, succeeded in having the law passed. Though de Faloux could not take part in the proceedings on
account of ill-health, the law bears his name, and rightly, for it was his work.

The aim of this law was twofold. It dealt with both primary and secondary education. In the first case, to conduct a primary school, France had to be at least twenty-one years of age, with three years’ experience in an elementary school, or a certificate from a commission appointed by the Minister of Education. For members of religious congregations in girls’ schools the lettres d’obédience took the place of this certificate. In the second case the law required the candidate to be twenty-five years of age, have five years of experience, and a degree of Bachelor of Letters, or a diploma from a ministerial commission. The new council of the university represented the leading philosophical opinions of France; besides a commission composed of university men proper it included 3 bishops, 1 rabbi, 1 Protestant minister, 3 counsellors of the high court of appeals (cours de cassa-

tion), 3 councillors of state, 3 members of the institu-
té, and 3 members of the board of free education. In two years’ time 257 free schools sprang up, and it is from this law, the last remnants of which the French Parliament is now (1908) preparing to abrogate, that dates the development of the Catholic teaching orders in France. In a consistorial address (20 May, 1830) Pius IX declared that Augustin is not the true apostle of the modern age, and that the Catholic Church, Pope and Bishops, had opposed the “thesis” and given a redent exponant in Louis Veuillot. In the Constituent and in the Legis-

lative Assembly, as minister and as deputy, de Falloux always maintained that France was obliged to protect Pius IX as a temporal ruler; he was one of the prime movers of the coup d’etat of June 24, during the Second Empire, he withdrew from public life. In 1856 he was elected to the French Academy. In the discus-
sions which took place in rosalist circles during the early years of the Third Republic, de Falloux invariably declared in favour of the national flag (the tri-
color) and in an article in the “Correspondant” (1879) he declared that the pretended pretensions of a party cry as the monarchists put forth the idea of a coun-
ter-revolution. Spuller, however, declared that because of his conspicuous ability as a statesman de Falloux was one of the most dangerous opponents the Revolutionary party had to encounter through the nineteenth century. It was on the basis of liberty that de Falloux desired to combat the false principles of the Revolution. He believed that politics should take into consideration not only the “thesis” or prin-
ciple, but also the “hypothesis” or actual conditions, and that certain too extreme formulas or too exacting claims were sure to prejudice rather than help the cause of the Church and the monarchy. The posthu-

mous publication of his “Memoirs” in 1888 revived earlier controversy between the “Correspondant” and the “Univers” and provoked a sharp reply from Eugène Veuillot.

DE FALLOUX, Mémoirs d’un royaliste (Paris, 1888); DE MA-

ZADE, L’opposition royaliste : Berger, Villelo, Falloux (Paris, 1837); DE LACOMBE, Les débuts de la loi de 1850 (Paris, 1900); VEUILLOT, Le comte de Falloux et ses mémoires (Paris, 1888).

GEORGES GOYAU.

False Decretals, or The Decretals of the Pseudo-Isidore, is a name given to certain apocryphal papal letters contained in a collection of canon laws composed about the middle of the ninth century by an author who uses the pseudonym of Isidore Mer-
cator, in the opening preface to the collection. For the student of this collection, the best, indeed the only useful edition, is that of Hinschius, “Decretales Pseudo-Isidorianae” (Leipzig, 1863). The figures in parenthesis occurring during the course of this article refer to the edition of Hinschius. The name “False Decretals” is sometimes extended to cover not only the papal letters forged by Isidore, and contained in his collection, but the whole collection, although it contains other documents, authentic or apocryphal, written before Isidore’s time.

The Collection of Isidore falls under three headings:

(1) A list of sixty apocryphal letters or decrees attri-
buted to the popes from St. Clement (88-97) to Mel-
chidases (311-314) inclusive. Of these sixty letters fifty-eight are forgeries; they begin with a letter from Aurelius of Carthage requesting Pope Damasus (306–
384) to send him the letters of his predecessors in the chair of the Apostles; and this letter is followed by a reply in which Damasus assures Aurelius that the desired letters were being sent. This correspondence was meant to give an air of truth to the false decreals, and was the work of Isidore. (2) A treatise on the Primi-
tive Church and on the Council of Nicaea, written by Isidore, and followed by the authentic canons of fifty-
four councils. It should be remarked, however, that among the canons of the Nicaea Council (Seville, page 438) canon vii is an interpolation aimed against

choreiscopi. (3) The letters mainly of thirty-three po-

pes, from Silvester (311-335) to Gregory II (715–
731). Of these about thirty letters are forgeries, while all the others are authentic. This is but a very rough description of their contents and touches only on the most salient points of a most intricate literary ques-

tion.

Their Apocryphal Character.—Nowadays every one agrees that these so-called papal letters are for-

geries. These documents, to the number of about one hundred, appeared suddenly in the ninth century and are nowhere mentioned before that time. The most ancient MSS. of them that we have are from the ninth century. They first appeared in the missals of the Middle Ages, and since the

Counter-reformation, they have been attributed to the popes of the thirteenth to the sixteenth centuries and are included in the canon law and used by the Church in the service. The question that now arises is, were these letters written by the popes in the ninth century, or were they concocted about the same time or later, and in what way? The answer to this question depends on a close study of the documents, especially those that are forged, especially those that are genuine. The Forgeries were concocted for the purpose of proving the pretended authority of the popes from the first century to the middle of the first millennium and of the popes in the middle of the first millennium to the middle of the second millennium. The Forgeries of the first period are from the first century to the middle of the first millennium and are composed of the works of the popes of the first century to the middle of the first millennium. The Forgeries of the second period are from the middle of the first millennium to the middle of the second millennium and are composed of the works of the popes of the second millennium. The Forgeries of the third period are from the middle of the second millennium to the middle of the third millennium and are composed of the works of the popes of the third millennium.
were pointed out by two Catholic priests, the brothers Ballerini, in the eighteen century.

How the Forgery was done.—Isidore was too clever to invent these documents in toto out of his own head. For the most part he plagiarized them in substance, and often in form. For the background he made use of certain data such as the “Liber Pontificalis”, a chronicle of the popes from St. Peter onward, which was begun at Rome during the first twenty years of the sixth century. For instance, in the “Liber” it is recorded that such a pope issued such a decree that had been lost or mislaid, or perhaps had never existed at all. The forger fitted the form of this pontifical letter suitable for the occasion, attributing it to the pope whose name was mentioned in the “Liber”. Thus his work had a shadow of historical sanction to back it up. But it was especially in the form of the letters that the forger played the plagiarist. His work is a regular mosaic of phrases stolen from various works written either by clerics or laymen. This network of quotations is computed to number more than 10,000 borrowed phrases, and Isidore succeeded in stringing them together by that loose, easy style of his, in such a way that the many forgeries perpetrated either by him or his assistants have an undeniable family resemblance. Without doubt he was one of the most learned men of his day. In the early part of the ninth and the beginning of the seventeenth, even up to quite recently, efforts have been made to discover all the texts made use of in the False Decretals. They make up quite a library. It is clear that the forger could not have had at hand the entire text from which he drew. He must have had content with extracts, selections, florilegia. But there was no way he could have had all the documents he had forged in one single homogeneous collection, which would have been exclusively his work, and then secured its circulation, but, clever man that he was, he chose a different plan. To battle suspicion he inserted or interpolated all his forgeries in an already existing collection. There was a genuine canonical collection which had been drawn up in Spain about 633, and was known as the “Hispana”, or Spanish. It contained (cf. Migne, P. L., LXXXIV, 93–918) first of all the texts of the councils from that of Nicaea, secondly the decreets of the popes from Damasus (306–384). Isidore took the volume and prefixed to it the first sixty of his forged decreets from Clement to Mill. The rest of his work was the same as if it had been from the collection of Isidore. As part II of his collection he retained part I of the Hispana collection, i.e. the genuine collection of councils since Nicaea (325). And as part III of his new volume added part II of the old Hispana, i.e. the genuine pontifical letters since Pope Damasus, but he inserted here and there among them the letters he had forged under the names of the various popes between Damasus and Gregory I (590–604). He was not yet safe, however, So, in order to give a more imposing appearance to the project, he inserted other documents not forged by him, but borrowed bodily from other collections of canon laws. Besides all this he interpolated many additions to authentic documents and added several prefaces to his forgeries. To support his forgeries he has been assumed that the forger made use of the unadulterated text of the Hispana. But as a matter of fact he used a French edition, and a very incorrect one at that, of the Hispana, and which was known on that account as the “Hispana Gallica”, or French Hispana, which has never been edited, and which is to be found in the MS. 411 of the Latin Documents in the Library of the University of Paris, where it is interlarded with the text of this French Hispana, so that his copy becomes, so to speak, a third edition or revision of the old Hispana. This is known as the “Hispana Gallica Augustodunensis”, or “of Autun”, so called because the Latin MS. 1341, of the Vatican, which contains it, came from Autun. This collection likewise has remained unedited.

The Isidorian collection was published between 847 and 852. On the one hand it must have been published before 852, because Himenar quotes the false decretal of Stephen I (p. 183) among the statutes of a council (Migne, P. L., CXXX, 775), and on the other hand it cannot have been published before 847, because it makes use of the false capitularies of Benedict Levitas, which were not concluded until after 21 April, 847. As to the place where the forgeries were all agreed, it was somewhere in France. The documents used by the forger, and especially those relating more nearly to his own epoch, are nearly all of French origin. And, as we have already pointed out, the frame chosen for the forgeries was the French edition of the Hispana. He also makes use of the “Dionysio-Hadriana” collection, which was the code of the Frankish Church, and of the Quensel collection, which had a French origin. Moreover, he refers to the Councils of Meaux and of Aachen of 836, and to that of Paris of 829, etc. On legal matters he quotes the “Breviarium” of Alaric. When he refers to civil affairs it is those of France he illustrates by. Lastly, it was in France that his work was first quoted, and it had a greater circulation there. Hence it is believed all agreed that the forgery was done in France, and that they vary widely when it comes to fixing the locality.

Some are in favour of Le Mans and the province of Tours; others incline towards the province of Reims. We shall have occasion to refer to these differences later on; for the present we may be satisfied that the false decreets were forged in the North of France between 847 and 852.

Now, what was the condition of the Church in France at that time? It was but a few brief years after the Treaty of Verdun (813), which had put a definitive close to the Carolingian empire by founding three distinct kingdoms. Christendom was a prey to the onslaught of Normans and Saracens; but on the whole the era of civil strife was over. In ecclesiastical circles Church reform was still spoken of, but hardly hoped for. It was especially after the death of Charlemagne (814) that reform began to be considered, but the abuses to be corrected dated from long before Charlemagne’s time, and went back to the very beginnings of the Frankish church under the Merovignians. The personal government of the king or emperor had been the great motive power of the Church. In ecclesiastical circles ecclesiastical liberty were identical, and this liberty they required for their persons as well as for the Church. Doubtless Charlemagne’s government had been advantageous to the Church, but it was none the less an oppressive protection and dearly bought. The Church was frankly subject to the State. Initiatives which ought to have been the proper function of the spiritual power were usurped by Charlemagne. He summoned synods and confirmed their decisions. He disposed largely of all church benefices. And in matters of importance ecclesiastical tribunals were presided over by him. While the great emperor lived these inconveniences had their compensating advantages, and with his death every thing was endangered. France was at the mercy of the factions, and at the mercy of the pope, who was always at the king’s beck and call. As soon as the Carlingvign dynasty began to show signs of over-increasing debility, and the Church, bound up with, and subordinate to, the political power, was dragged into the ensuing civil strife and disunion. Church property excited the cupiditv of the various factions, each of them wished to use the bishops as tools, and was defend at the expense of their co-religionists. The clergy were exposed to the vengeance of their adversaries. There were charges brought against them, and sentences passed on them, and not canon law, but political exigencies, ruled in the synods. It was the triumph of
the lay element in the Church. Success, even when it came, had its drawbacks. In order to devote themselves to political questions the bishops had to neglect their spiritual duties. They were to be seen more often on the embassies than on visitations. As supplies in their dioceses they had to call in auxiliaries known as *choreepiscopi*. What wonder, then, that these abuses gave rise to complaints? Especially after S29 the bishops were clamouring for ecclesiastical liberty, for legal guarantees, for immunity of church property, for regularity of church administration, for the decrease of the number of *choreepiscopi* and of their privileges. But all in vain; the Carlovingian nobles, who profited by the confusion, were afraid of the new order. Powerless to better itself, could the Frankish Church count on Rome? At this very time the situation of the papacy was by no means inspiring; the Church at Rome was largely subject to the lay power in the hands of the imperial missi. Sergius II (845–847) has not escaped the reproach of Simony. Leo IV (847–855) had to defend his person just like any simple Frankish bishop. In the face of such a wastred situation the juridical prescriptions of Isidore are ideal.

**Canon Law According to the False Decretals.**—We are not here concerned with the whole collection, but only with the laws contained in the forged documents. At the outset, let it be noted that Isidore's prescriptions have to do with a very limited number of cases and are usually against the secular power in slightly varying forms. Yet the forger's legal system is far from having any perfect cohesion. Inconsistencies, and even contradictions, are to be met within it. In the following synopsis, which is necessarily short, no notice is taken of these legal stumbling of Isidore; we are content to simply sum up the teachings of the false decreets, under headings expressing our uncertainty concerning the relations of the political and ecclesiastical powers, Isidore sets forth the ordinary ideas of his time as to the supremacy of the spiritual over the temporal authority. Of his own authority alone, the ruler cannot assemble a regular synod; he must have pontifical authorization to do so (p. 228). That is a new requirement. A bishop may be neither accused nor condemned before a secular tribunal (pp. 98, 483). The Theodosian Code, from which the forger borrows in this matter, granted the *priviligium fori* only for minor faults. In such matters the Frankish law was not very explicit and was open to various interpretations. What is novel in Isidore is the general character of the law withdrawing the jurisdiction of the papacy and recognizing in bishops a certain jurisdiction in secular matters. Roman law had already recognized this. He goes on to deal with the immunity of church property, which cannot be diverted from its original purpose without sacrifice. The evangelization of Christendom is a complex story which modern criticism has retold for us, by showing that the ideas on this question in Isidore's ideas thereon were those of his time, and therefore for the most part legendary. According to him, the organization of parishes was laid down by Clement of Rome, as early as the close of the first century, and was to be modelled on the ecclesiastical divisions of Rome and of the catacombs. This meant that dioceses were also a primitive institution, and the dioceses by way of consequence a tripartite structure in primitive times. The Apostles were thought to have accepted the territorial divisions of the Roman Empire, which had been handed down since then as ecclesiastical provinces. There is not much historical basis for such an explanation. It stands to reason that in Isidore we must clearly distinguish between this fantastic view of history and the explanation of the archdiocesan organization. On all essential points the forger reproduces the current ideas of his time. But he deserves attention when he speaks of *choreepiscopi*, or those auxiliary bishops we have already referred to.

According to him they are usurpers; so far as power of order goes, they have priestly orders and nothing more. Every episcopal function exercised by them is null; all their sacramental acts ought to be reiterated. As a matter of fact, Isidore was wrong: *choreepiscopi* had full power of order and might validly administer both confirmation and ordination. Isidore forged theology as well as letters. He strongly affirms the authority of the bishops. That is his great concern. With him nothing else counts (pp. 77, 117, 115, 243). The bishop is monarch in his own diocese, but he does not stand alone; bonds unite him to his neighbou. This was the forger's idea. The capital of each ecclesiastical province has a juridical right or title to be a centre of assembly for the bishops; this right is derived from the primitive division made by the popes. The province is to be governed by the provincial council, presided over by the metropolitan. On the prerogatives of this dignitary Isidore reproduces the prescriptions of the ancient law prior to the middle of the eighth century the metropolitans had increased their prerogatives, and Isidore tries to ignore this *de facto* situation; for him nothing counts but canonical texts; the metropolitan is *primus inter pares*, and he can do nothing without the consent of his colleagues. The forger goes on to mention higher jurisdictions, the *metropolitanas* which are not discussed in the canonical texts but show a slight knowledge of church government in Africa and in the East, and we have one of the most glaring examples of his incoherence.

**The Authority of the Pope.—**In the many texts where the pope is in question Isidore is true to his task of plagiarizing. Very often he copies passages borrowed from ancient sources. There is never any mention of his own existence or his authority in the rights of the papacy. In many cases Isidore is but the mouthpiece repeating the sayings of the earlier popes, and we know how clear and uncompromising those early popes were on the question of their prerogatives. For example, call to mind the papas between Innocent I (401–417) and Hormisdas (514–525) and the series of their declarations. All that was well known in the ninth century, at least in theory. And it was all embodied by Isidore. But on the relations between pope and bishops he shows a certain inconsistency. Following the traditional teaching, he declares that the Apostolate and the episcopate were directly instituted by Jesus Christ. Yet at times he seems to be on the point of denying the papal authority (p. 712). He says (p. 712): "Ipse namque eclesiae que prima est ita reliquis ecclesies vices suas credidit largiendae ut in partem sint vocatae sollicitudinis non in plenitudinem potestatis." Taking this passage strictly and by itself, it would seem to deny the *potestas ordinaria* of the bishops. But nevertheless the sentence is not an intentional forgery; it was merely another case where Isidore is a plagiarist. He had got hold of a famous text by St. Leo (Migne, P. L., LIV, 671), addressed to the Bishop of Thessalonica. From the end of the fourth century this bishop had been named by the popes as their representative in the province of Illyricum. Hence the Bishop of Thessalonica exercised by delegation certain rights belonging to the pope; in the case of *laEditio Vigilius* (p. 712) say: "Ipse namque eclesiae que prima est ita reliquis ecclesies vices suas credidit largiendae ut in partem sint vocatae sollicitudinis non in plenitudinem potestatis."
mands that provincial councils be held at regular intervals. He asserts for the pope the right to authorize the calling of all councils and to approve their decisions. Laid down in this general and imperative manner, these claims were something new. Nothing like it had been of obligation for the holding of provincial councils; as for approving of the decrees of councils, it was a common occurrence in antiquity. When matters of serious importance were in question the popes claimed the right of approval, but there was no formal or general precept asserting such right. And in any case Isidore's legislation thereon never became the law.

Ecclesiastical Trials.—The procedure to be followed in the trial of ecclesiastics is of special interest to Isidore. According to him, the judging of clerics of all ranks up to and including the priesthood belongs as a last resource to the provincial councils and the pri- mates. He says nothing about priests appealing to Rome, and in this he agrees with the fourteenth canon of the Council of Sardica. However, in the case of the trials of bishops he shows some inconsistency in his legisla- tion. On the one hand, he upholds the law as it existed prior to his time, and on the other hand, he lays down a new law. Hence we find two series of texts which it is not easy to reconcile. The first series agrees with the existing law. A provincial council is the ordinary judge of bishops, which is in no way limited to those appeals made to him by one of the interested parties. However, in the case where the impartiality of the judge is seriously doubtful, the bishop need not wait for the council to pass sentence, but may take his case straight to Rome. Stated in this general way, the latter provision is new. But as it is based on the idea of plain justice, it is not altogether foreign to the ancient Roman law. Isidore's rules, as mentioned in Roman law, from which Isidore borrowed it. How may the pope set about hearing an appeal? The ancient law did not exclude, but did not make provision for, sentence being passed at Rome itself. It recognized the pope's right to appoint a court of appeal composed of bishops from the neighbourhood of the accused; furthermore, he had the right to be represented there by a legate, who would naturally have a preponderating rôle at the trial. Such were the rul- ings of the Council of Sardica. But as a matter of fact, from the fifth century we have cases where the pope summoned episcopal appeals to be heard in Rome itself. So it is not a great surprise that Isidore should leave the pope free to decide where the final trial shall be held. But Isidore, by side with this first series of decisions along the lines of the ancient law, we find another series which lays down a new law. Therein it is said that in the trial of bishops, the function of the provincial council is limited to hearing both sides of the case and referring it to the pope for judgment. Sentence can only be passed with his approval. This is new legislation. But one sees Isidore is not really inventing; he is merely giving clear and direct expression to the tendencies of his day. In face of the dangers created for the bishops by political disturbances, by the fear of being condemned for party feeling or through motives of revenge, the bishops themselves were eager that charges against them should not be decided without the approval of Rome. One of the most characteristic peculiarities of the false declarates is the procedure laid down for the trial of bishops. Isidore declares over and over that it was the will of the Apostles that there be as few charges as possible made against bishops, and that, when there are any, their trial should be made as difficult as possible. This is a point well worthy of note. This could be a difficult thing, their def- ence an easy matter. Isidore's legislation on this head, when systematized, so efficaciously hindered any judicial action against a bishop that the reader is almost inclined to treat it as a joke. However, we must be just; it was not all an invention on Isidore's part. His procedure in the main reproduces the requirements of Roman law; it draws on the decisions of the Roman apocrypha of the time of Symmachus (498-511), and it levies tribute from the laws of the Barbarian kingdoms. In a case of this kind, anything like a careful and thorough criticism requires that great attention be paid to the question of the sources employed. Isidore piles up obstacles against the accusation of bishops, but the obstacles are not all of Isidore's own devising. Any bishop dispossessed of his sees by virtue of a deacon or any ecclesiastic who has a right to raise the plea of actio spoliis, i.e. to fall back on the fact of dispossession in order to avoid trial, until he has been provisionally restored to his possessions and dignities. This appeal before trial is one of the main points in the Isidorian procedure. The only one who is competent to bring a charge against a bishop is the council of his province. Foreign tribunals are excluded, and the provincial council must have a full quorum. The charge must be made in the presence of accused and accusers. If one of the interested parties absconds, the whole judicial machine comes to a standstill.

The following are the rules governing accusations. A layman can bring no charge against a bishop. This is the only rule in which the Isidorian law differs from the time of Symmachus, and the reason for the difference is that Isidore's law may be explained by the different judicial status of clerics and laymen at the time of Isi- dore. Clerics were judged according to Roman law, whereas many laymen were subject to Germanic law, and the procedure under these two laws was different and often hostile. Moreover, at times laymen would not recognize clerics as having the rights to accuse them in the Isidorian procedure. In order to declare laymen incompetent in their courts. Then, too, it must not be lost sight of that Isidore's principle was never observed in practice; a modus agendi was always found. Isidore's second principle was that a cleric could never bring a charge against his superior. It is evident that thus the number of possible accusers was very restricted. The accusation must be made not in writing, but by word of mouth. Only those might bring charges who fulfilled exceptional conditions in respect to rank and standing. In this way it was easy to get rid of a troublesome accuser. The witnesses must be of equal merit with the accuser, and it took seventy-two witnesses to condemn a bishop. This again is not an invention of Isidore's. It was a common law of the western church. Besides, the laymen could also form a council of seventy or seventy-two bishops. The numbers are an allusion either to the seventy elders of the Jewish people or to the Seventy-Two Disciples. But Isidore managed to complicate the situation by applying the number to the witnesses; though even if it were applied to the judges, the difficulty would not be lessened in practice. It was not easy matter to get together so numerous a tribunal. In the ninth century Photius declared that these two traditional numbers were not necessary; in any case Isidore's legislation was never enforced. The hearing of the charge follows Roman law, and minute regulations were drawn up to secure all the necessary scope and impartiality to the arguments for and against. Any accusation against a bishop must be brought to a denomination made up of at least three bishops, and no signature obtained by force was valid.

In his preface Isidore declares the purpose of his work. His aim is to build up a collection of canons more complete than any other by uniting together all the canons dispersed among the various existing collections. What must we think of this declaration? This is so superficially thought that it is character all its own by the fact that it includes a hundred documents forged in Isidore's workshop. He might easily have made that complete collection, without having recourse to forging documents for it.
And, as a matter of fact, is his collection more complete than any other? Even a summary examination soon shows that there are many lacunae in this collection of canon law. It omits all mention of many important matters, governing of rural parishes, ecclesiastical benefices, tithes, simony, the monastic life, questions concerning the matrimonial laws, privileges and dispensations, and the pallium. The governing of parishes and the question of benefices were of vital interest when Isidore lived. Though not quite so acute as during the tenth and eleventh centuries, these points of law became occasions of conflict between the Church and the feudal society in progress of formation. Isidore was not personally involved in these conflicts, and as Isidore does not refer to these, he can hardly claim to have wished to supply a complete ecclesiastical code. So we are driven to conclude that he had a very special object in view in composing his partial code. How are we to discover what this object was? Evidently by examining the documents he forged. There, if at all, are to be found his dominant ideas. Does not an examination of the temporal power of princes show what we have just said concerning the legal side of the false decretals. Isidore's object is so clearly defined that it requires no very laboured analysis to discover it. His chief aim is to assure the dignity and fruitfulness of the episcopal office. In his view the diocese is the life-giving centre of the whole ecclesiastical organization, and this centre is his chief concern. All his legislation has this same object. But perhaps it may be argued that, while he is indeed concerned to safeguard the authority of the bishops, he is even more careful to increase that of the pope. This was a view long in favour among both Gallicans and Protestants, but it is no longer the fashion. In our day critics are, on the whole, agreed that the immediate object of Isidore's work was the diffusion of his doctrine and authority. If he touches on the prerogatives of the pope, it is never in the interests of Rome, but always in those of the bishops. It was for this that he tried to facilitate appeals to Rome. But in his idea the role to be played by the pope would not restrict the rights of the bishops. It has been observed that Isidore does not admit to the temporal power of princes, and that he never thinks of turning to profit Constantine's pretended donation to the Church of Rome, nor does he seem to aim at increasing the French protectorate at Rome. Yet if his object had been to favour the Holy See, how differently would he have gone to work. Now, if we compare these aims of Isidore with the actual situation of the Frankish Church when the forgeries were at their height, we find that no such true of the papacy as Isidore wishes to give to this body. This will be evident that false decretals are directly opposed to the chief abuses of which the bishops were the victims at that time: condemnations of a political character, neglect of the episcopal office, and the establishment of chiroepiscopi. This explains the lacunae in Isidore's ecclesiastical code. He was fighting against uprisings and prison cases. And his secretary is asked not to form a clear opinion of his age, of those deep causes of which the slow but measured action must inevitably transform society. And hence it was that Isidore confined himself to things that were more or less on the surface in the everyday life around him. If he foresaw other dangers in the path of the Church, he certainly made no attempt to provide against them. And this new work Isidore owed much to the "Liber Pontificalis", or chronicle of the popes. Thus when the Liber tells us that such a pope issued such a decree long since lost, the forger noted the fact and set to work to invent a decree for his collection along the lines hinted at by the "Liber". This is a method well known in diplomatic work, and one that has left us the acta rescripta, of which we have many specimens in ancient charters. These acta rescripta are documents which, at a date long subsequent to that they bear, and because the originals or ancient copies of them had been damaged or lost, were drawn up by the aid of the remnants of the originals, or from extracts therefrom, or analyses of them, or at times from mere tradition concerning their contents (cf. Giry, "Manuel de diplomatique", Paris, 1894, pp. 12, 507, etc.). In Isidore's opinion many of the false decretals were merely such acta rescripta. It was at this time that Isidore wrote his constitutiones and Isidore was far from being scrupulous. With a faint modification it might be said of him as of another forger in the seventeenth century, the crafty Father Jérôme Vignier, "He was the greatest liar in Paris." But men of the ninth century must not be judged according to modern ideas of literary morality. Neither can the false decretals be looked at as a purely literary work. They are a landmark in the evolution of law. In every society law develops or evolves itself like other things, but under conditions of its own, and step by step with the social life it regulates, and which it must keep pace with in order to regulate. The state of society, the ensemble of its customs, change more or less according to time and place, and are never static. And the codification of these needs is not limited to any degree, by causing a chasm between former legislation and the newly born needs of a changed society. The written laws no longer meet the requirements of the social state they ought to regulate, and a readjustment of legal provisions becomes necessary. History shows us that this may take place in many ways, and that it is not always possible to foresee the desired change and the surroundings in which it takes place. It may be effected by the gradual substitution of new laws for those that have grown antiquated or, less courageously, by what is known as a creative interpretation of existing laws, of which we have many examples in Roman law; and again, in desperate cases, the change may be brought about by forgeries, when no other means seem applicable. In the middle of the ninth century, the rules of canonical legislation did not seem to be the best possible to meet the existing state of ecclesiastical affairs. The reform councils of the ninth century had tried to bring about the new laws demanded by the situation, but the lay power had blocked the way. And thus the evolution was line, finding an obstacle to its growth on one side, was constrained to seek solutions of the problem. Scarcely able to advance in normal fashion, a canonist whose intentions were more commendable than his acts bethought him of calling in the aid of the forger. It is impossible to condone such forgeries, but the history of the case puts us in a better position to judge them, and even to discover extenuating circumstances in their favour, if emphasized by the powerful Roman, or at least, the society of the period, and which were acting with what one may call historical fatalism. Moreover, the false decretals are the work of private enterprise and have no official character. The theory that they were planned in Italy has been long since abandoned. They are of purely Gallician origin, and if they deceived the Councils, it was the Councils that have been so badly known there. They found their way into England towards the close of the eleventh century, probably through Lanfranc, Arch-
bishop of Canterbury. Their reception in Italy is of greater importance. It occurred probably during the pontificate of Nicholas I (858-867). It seems certain that he knew of the decretals, and it is possible that he may have even possessed a copy of them, and showed proof of this on the occasion of the appeal to Rome made by Bishop Rothade of Soissons, who had got into difficulties with his metropolitan, Hildemar of Reims. Rothade reached Rome about the middle of 861. He had already caused his appeal to be presented to the pope, but he now explained his case in detail. It was to his interest to quote the authority of the faits des rois, a fact he cannot have overlooked. This is proved by a letter written by Nicholas I on 22 January, 865, dealing with Rothade's appeal. Pope Adrian II (867-872) was acquainted with them, and in a letter dated 26 December, 871, he approves of the translation of Actard, Bishop of Nantes, to the metropolitan See of Tours, and quotes apropos one of the false decretals. Quotations made by Stephen V (885-891) are not conclusive proof that he directly used Isidore's text; and the same may be said of occasional references to it during the tenth century, which occur in the letters of the popes or of the papal legates. However, other authors in Italy show less reserve in using the false decretals. Thus, at the end of the ninth and the beginning of the tenth century, Isidore, who is found in the texts of Isidore in the treatises he wrote in defence of the ordinations performed by Pope Formosus (891-896). It is true that Auxilius was born among the Franks, as was also Rathiher, Bishop of Verona, who likewise quotes Isidore. Attone of Verceil, however, was an Italian, and he quotes him. At the end of the ninth century and during the tenth, extracts from the false decretals begin to be included in canon law collections—in the collection dedicated to Bishop Anselm of Milan, in the Région collection about 906, among the decrees of Burehard, Bishop of Worms. Nevertheless, until the middle of the eleventh century the false decretals did not obtain an official footing in ecclesiastical legislation. They were nothing more than a collection made in Gaul, and it was only under Leo IX (1048-1054) that they took firm hold at Rome. When the Bishop of Toul became pope and began the reform of the Church by reforming the Roman Curia, he carried with him to Rome the apocryphal collection. Anselm of Lucca, the friend and adviser of Gregory VII, composed an extensive collection of canons among which were many of the false decretals. It is stated that a forgery happened in the case of Cardinal Deudseid's collection made about the same time. And finally, when in 1140 Gratian wrote his "Decree," he borrowed extensively from Isidore's collection. In such manner it gained an important place in schools of law and jurisprudence. It is true that the Gratian collection had never the sanction of being the official text of ecclesiastical law, but it became the textbook of the schools of the twelfth century, and, even with the false decrees added to it, it retained a place of honour with the faculty of canon law. It was it that supplied the text of the "everyday" instructor on the things most essential to be known. And the faculty of law styled itself faculty of the Decree; which shows how important the school was given to the Isidorian texts inserted in the decretals.

Influence.—For a long time the Gallicans and the Protestants dwelt on the innovation contained in these apocrypha and on the rights, altogether novel, which they conferred on the popes and which would never have come to pass had it not been for these forgeries. Nowadays Isidore's aim is understood to have been to improve the rights of the bishops; and if the papacy profited by what he did, it can be shown that it was a necessary consequence of the pope's being made the champion of the bishop. And even though it must be admitted that the popes benefited by the forgeries, their good faith is beyond question. Isidore wrote a long way off from Rome; he deceived his own neighbours in France, and among them the learned Hildemar of Reims. What wonder, then, that he deceived the popes also, when his work was carried to Rome by Rothade of Soissons about the summer of 867. It is true that some have hinted that Nicholas I erred against truthfulness; that he pretended that the Isidorian texts were contained in the archives of the Roman Church, an assertion not only inexact but untruthful (Sagine, P. L., CXIX, 901). But as a matter of fact, and from a broad view, this was beyond any doubt unless Hincmar's, or his like, added anything beyond. What he does say refers equally to the authentic decretals not included in the Dionysio-Hadriana collection. On the dubious interpretation of an obscure text it is not fair to bring a charge of untruthfulness against a man of character like Nicholas I. And if an unfavourable interpretation be accepted as the real one, the blame falls on the draftsman of the pontifical letters, the famous Anastasius the Librarian. Another reason for not impugning the honesty of Nicholas I under the circumstances is that he was under no necessity; he had no interest in approving of Isidore's letters. Indeed, he is much more reserved in his treatment of them than the Frankish bishops were at that very time. In that very letter of 22 January, 865, he spoke point by point of the false decretals, and when it is to their own interest, they quote the letters of the early popes (i.e. Isidore's forgeries), and when the letters are unfavourable to them, they repudiate them. We saw above that according to Isidore's judicial system a bishop dispossessed of his see by violence and then hailed to the courts had the right to plead the fact of dispossess in order to escape appearing before the courts, and that he must first be provisionally restored to his possessions and honours so as to arrange properly for his defence. No doubt Isidore had not invented all this. Roman law and canon law supplied him with precedents and even laws for it. But he made such procedure an essential factor in canon law. And it is an undoubted fact that from the year 864, in cases such as the one we refer to, Isidore's ideas and expressions exercised a marked influence on the conduct and decisions of Nicholas I. There is nothing calling for adverse criticism in all this as far as Nicholas is concerned. As a piece of legislation it was altogether in favour of the bishops. From another point of view it is important to consider whether, in the appeals of bishops who sued for dispossessions, Nicholas I was really influenced by Isidore's forgeries.

What we have already said concerning the forgery's objects and aims limits the bearing of the question to a great extent. As a piece of general hard and fast legislation, Isidore's method of procedure was quite new. But the practice of the popes and the custom of the ecclesiastical courts supplied precedents which more or less bore out the principles laid down by Isidore. Hence we see that if Nicholas I made use of the apocrypha to justify his teaching on appeals to Rome, we must necessarily admit that he relied on a forged document; but even then we should not be obliged to admit that he was influenced by teaching altogether foreign to ecclesiastical antiquity, but only that by means of these schools was introduced a knowledge of the Roman law. As of St. Leo and of Gelasius I, two popes of the fifth century. And, as a matter of fact, did Nicholas I gain his teaching concerning appeals from these apocrypha? We have no proof whatever that he did. His firm and solid conviction of the rights of the Holy See had nothing to learn from the weak inventions of a forger among the Franks; he must have gained this knowledge from his predecessors, like those dating from the fifth and sixth centuries. We can admit that, while the pope's contention is justified, the arguments with which he supports it are at times open to attack. Thus, in a letter addressed to the
Council of Soissons in 563, he wishes to assert his right to intervene in the trials of bishops, even when there was no question of an appeal to Rome. This amounted to an assertion of the absolute power of the Holy See, a claim he might have supported by many solid arguments; yet what is our surprise to find him claiming in support thereof the canons of the Council of Sar-
dica, which say nothing of the sort. The Council of Sar-
dica (459) intended very particularly to safeguard the rights of bishops, but these were not being persecut ed; that was its main object, and it by no means intended to define the rights of Rome in matters of the kind. These canons mark one of the early steps in the question of church discipline.

The claim of Nicholas I ought to have been supported by texts from the fifth and sixth centuries; and in the case in question his object was much more creditable than the reasons he gave in support of it. On the whole, then, from the beginning of his pontificate, and before he knew of the Isidorian texts, Nicholas I was in full sympathy with the ideas expressed therein. Acquaintance with those texts did not seriously affect him. Yet, in his letter to the Frankish bishops, dated 22 January, 863, apropos of Rothade, he puts the theoretical basis of his letter that he ought to have put it; so much so, that one writer speaks of the *perfun isidori en* that letter exhales (Fournier). If the letters of the early popes (i.e. the decretals of Is
dore) are not explicitly quoted, they are at least alluded to. But from all that has been said we must conclude that Nicholas I took none of his essential ideas from Isidore, and that any influence he did exercise has been a too insignificant an account in a pontificate so filled with enterprises of daring and of moment. And this conclusion in Nicholas's case gives us more or less the answer to the further question as to how far the apocrypha influence the subsequent history of the Church. As we have seen, even without Isidore, Nicholas I would have brought about the same mode of government. And it has been observed that the ideas of Nicholas I were those of Gregory VII and of the great popes of the Middle Ages; that is to say, Isidore or no Isidore, Gregory VII and Innocent III would not have acted otherwise than they did. As a matter of history, such a conclusion is quite justifiable, and as far as apolo
etics go it is quite sufficient answer. In the domain of the history of law, Isidore's forgeries never had any serious consequences.

Having said this, we are free to confess frankly that in lesser spheres than those of theology and law, the false decretals have not always exercised a fortunate influence. On history, for instance, their influence was baneful. No doubt they do not bear all the blame for the distorted and legendary view the Middle Ages had of ecclesiastical antiquity. During the Middle Ages it was almost an impossibility to consult all the sources of information, and it was difficult to check and control those at hand. It was not easy to distinguish genuine documents from apocryphal ones. And this difficulty, which was the great stumblingblock of medieval culture, would have been always an obstacle to the possessors of historical notions. It must be admitted that Isidore's forgeries increased the diffi
culty till it became almost insurmountable. The forgeries blurred the whole historical perspective. Customs and methods proper to the ninth century stood out in relief side by side with the discipline of the first centuries of the Church. And, as a consequence, the Middle Ages knew very little concerning the historical growth of the rights of the popacy during those first centuries. Its view of antiquity was a very simple one, and perhaps it was just as well for the systematizing of theology. In the main, it was no easy matter to develop a historical sense during the Middle Ages. The absence of such a sense is all the more remarkable when we consider what civilization owes the Middle Ages in the realms of philosophy, theology, and architecture.

PLACE OF ORIGIN.—We have purposely reserved this question for the end. In the first place, it is of lesser importance than the others; and in the second, whereas critics are for the most part in agreement concern
ing the questions we have been treating, they are divided into two parties on this final question. For a time the decretals were thought to have been forged at Mainz, but they were also believed to have been for
doned, and now the disputed honour lies between Reims and Le Mans in the province of Tours. Here are the arguments put forth on both sides. The majority of German critics and a section of those in France favour Reims as the place where the decretals originated. According to them, Isidore's legislation concerning the trial of bishops was intended to sup
to the cause of Ebbon, Archbishop of Reims, in order to facilitate the retrieval of that dignity. Ebbon had been deposed in 835 for political reasons. He was rein
stated at Reims in 840; he had to leave his see in 845 and ended his career in 851 as Bishop of Hildes
dheim. According to the critics, a comparison between his case and Isidore's procedure at trials shows such agreement as to require the conclusion that these works, which have been thought to be divided, are one and the same: for instance, the provisional restoration of the accused and dispossessed bishop, the arrest of the bishop, the possibility of a translation from one see to another (from Reims to Hildesheim). Besides this, it was in the province of Reims the forgeries first appeared, and from there they were carried to Rome by Rothade of Soissons; then, too, it was in this same diocese that, even since the foundation of the See, the struggle against cler
ci-perifis was most intense. Isidore's opposition to archiepiscopal authority is also very marked; and, according to the critics, the province of Reims was the birthplace of that opposition during the years that intervened between Ebbon's deposition (838--841) and Hincmar's nomination (845); hence the conclusion that the forgeries, be they genuine or spurious, were the work of Ebbon, and probably by clerics ordained by him in 841, and against whose ordination Hincmar, Ebbon's successor, raised objections soon after his election. This cumulative mass of argument is impressive; but to be really conclusive it would be necessary to prove that Isidore's legislation was in
voked by these clerics against their archbishop, before his death in 845; or at least that the apocryphal *decretals of Soissons was held, in which the ordinands held by Ebbon at Reims in 841 after his restoration were declared invalid. No such proof is forthcoming. The documents in favour of Ebbon in which it is dis
covered a similarity to the teaching of the apocrypha are later than 833. At that time Isidore's work had be
gan to spread. That it was known and used at Reims after 833 is not at all surprising and is no proof of its having been composed in the Province of Reims. Furthermore, if these apocrypha had been composed in favour of Ebbon and of the clerics he ordained, then the question of the validity of ordinances performed by a deposed bishop ought to have been treated of. Yet not a word is said concerning it; though, on the other hand, it is said that the forgeries were of clerics up to and including priests to the metropolitan council and to the primates. No mention is made of an appeal by priests to Rome, an omission that is in
xplicable if the documents were written in favour of the clerics ordained by Ebbon, and who are supposed to have been the actual writers. Add to this that the period 847--852, when the forgery was committed, was for the clerics of Reims. Ebbon's partitions, a period pending appeal and a time of *entele* with Hincmar. For the moment, they had no reason to need such a weapon against the archbishop. Lastly, P. Fournier points out that the theory which makes Reims the scene of the forgery in opposition to Hincmar is at variance with what we know of Hincmar's attitude.
If Hilmar had the faintest suspicion that the decre
tals were aimed at him, he would have treated them
differently. Though he had a suspicion that one or
other document had been forged in part, he offered no
objection to the collection as a whole. But it is cer-
tain that he would have spared no pains to discredit a
code intended as a weapon against him. On the
whole, then, this theory is an attractive one; but while
no solid proof can be brought in its favour, many
solid arguments can be brought against it.

There is another set of critics who fix on the prov-
ince of Tours and the neighbourhood of Le Mans as the
scene of forgery. But the Bull is different, and the
three critics are Langen, Dollinger, M. M. Simson, Violet,
J. Havet, P. Fournier and L. Duchesne. According to
them, the forged legislation on the trial of bishops and
the organization of dioceses and ecclesiastical
provinces aim at a state of things existing in Brittany
after 845, when Néonoé, Duke of Brittany, gained a
victory over Charles the Bald. At that time Brittany
was eager for independence, in the ecclesiastical as
well as in the civil order. The bishops in Brittany
were subject to the metropolitan of Tours, and the
Carlovingian sovereigns clung to this ecclesiastical
subjection as a pledge of political subordination.
On the other hand, the Duke of Brittany was anxious to
get rid of four bishops whom he suspected of favouring
the aspirations of Le Mans exactly as his bishops were
from them. The affair was carried to Rome, and about 817 Leo II wrote a letter to the Duke of Brittany reminding him of the claims of
fear. The whole thing caused much commo-
tion among the Franks and at Rome. As it was a
matter of public knowledge, and more or less contem-
porary with the appearance of the decretais, nearly all
the critics are agreed that Ilarid, and probably John
departing from his mind when he wrote, and that many of his laws
presupposed some such state of affairs as existed in the
province of Tours and the Church of Brittany. These
are only appearances, however, and we want precise
proofs, something more definite. Now the critics in
question think they recognize a family likeness be-
tween two documents which were certainly written at
Le Mans and the decretais of Isidore. The first of
these is the apocryphal Bull of Pope Gregory IV (527-
844) in favour of Aldric, Bishop of Le Mans. In
this letter (Migne, P. L., CVI, 853) the pope recognizes
the right of the Bishop of Le Mans to take his case to
Rome whenever a charge is brought against him. The
letter is supposed to have been written on 8 July, 853.
It is curious that this document should be so
wonderfully similar to that of the forger. The forged
Bull of Gregory IV is a mosaic of authentic texts, and
very often they are texts which Isidore used over and
over again.

The critics are all agreed that this forged Bull and
the decretais are independent documents; that is, that
neither makes use of the other. But the critics we are
now discussing do not think that they were the work of
the same workshop; that they are alike in materials and
methods of composition. And they further point out
the closeness of their dates. The forged Bull was cer-
tainly drawn up at Le Mans, they say, about 850,
when Le Mans was in the hands of the Duke of Brit-
tany. The bishop, who favoured the Franks, was in a
sorry plight; and to protect him the Bull of Gregory IV
was written, at least so far as the due to the date of the decretais, and the family likeness be-
tween the documents would be explained by the iden-
tity of their origin. The same critics argue in the
same way in the case of a memoir or story of a dispute
that took place in 838 between Aldric, Bishop of Le
Mans and the Abbey of St-Claud (Migne, P. L., CXV,
81-82). During the course of the trial the authority of
the canons is quoted after the manner of Isidore, i.
. in mosaic-fashion made up of those fragmentary
passages Isidore was so fond of using. And this docu-
ment belongs to the years between 842 and 846. We
are still at Le Mans and about the period when the
decretais appeared. Moreover, it is a fact that there
were cheroepiscopi at Le Mans at this time. Now,
what are we to think of these arguments? They are
not without value, but not all their assumptions are
beyond question. Thus, we have no proof that the
forged Bull of Gregory IV was written during the life-
time of Aldric. The present writer is of the opinion
that it was after his time and as a support to Robert
of Le Mans, successor to Aldric, in his quarrel with the
monks of St-Claud. But the question as to the date
of the Bull is beside the point. An important argument is the existence at Le Mans, about
the very time when the decretais were forged, not of a
document, but of two documents concocted in the
very style of the forger Isidore. And there seems
reason to believe that Le Mans has most claim to being
the scene of the forgery of the decretais. In the inter-
ests of fairness we must, however, say one thing: As
we have seen, the knowledge of the decretais shown by
Pope Nicholas I dates from the visit to Rothode to
Rome in 864. It is a matter, for us, of some surprise,
since in the previous year the same pope had to deal
with the appeal of Bishop Robert of Le Mans, suc-
cessor of Aldric. If the false decretais were forged at
Le Mans, how comes it that Bishop Robert did not use
them when he visited Rothode only two years later? It is true that in his letter of 22 January,
865, Nicholas I declares that the Frankish bishops ap-
peal to the decrees of the early popes (i. e. the decre-
tals of Isidore). And it may be that Bishop Robert
of Le Mans is included in this generalization.

MANUSCRIPTS, EDITIONS. —The MSS. of the
decretais belong to many classes, but we shall
consider only three, which serve to show how the
two works spread. The first class comprises twenty-five MSS. Although all of them are incomplete, yet we are able to restore the full text from them, i.e. the text
of the canonical collection described above, and re-
stored in the edition of Hirschius. A second class of
MSS. contains only a part of Isidore's work. This
class comprises eighteen MSS., which give Part I of
the collection, i.e. the apocryphal decretais up to
Melchiades, but omit Part II, and give only a portion
of Part III. These MSS. cease at page 508 of the
dition of Hirschius. Everything leads to the belief
that the MSS. of this second class are merely exer-
acts from the first. A third class of MSS. is represen-
ted only by number 1341 of the Latin MSS. in the Vatican
collection. This MS. is written by Adolph von
Gallic Augustodunensis', of which we have already
spoken. This collection may be looked on as a first
edition, a trial edition of the false decretais. It does
not contain Part I, i.e. the apocryphal decretais from
Clement to Melchiades, but only those parts which cor-
respond to the genuine Hispana, namely the councils
and the decrees of the popes from Damasus. In the
original MS., which was written in 8th century,
many of the apocrypha which later found their way into the
completed edition of the false decretais. The principal
of these apocrypha are to be found on pages 501-508 and
509-515 of the edition of Hirschius. It should be
remembered that the Hirschius edition is a critical ed-
ition; i.e. one edited after a thorough study of the
manuscripts of the false texts. The text of the false
documents has not been subjected to any
criticism, the editor contenting himself with repro-
ducing it just as he found it in already extant col-
cctions, that is to say, existing previous to Isidore's
reatment of them.

An endless number of books have been written on this sub-
ject; and we give here only those that are indispensable and that sum
up all others of importance. The Préface to the edition of Hins-
chius. SIEKEL, Pseudoditator in Realencyck. für prot. Th. Rom.
Kirkhe. FÖRSTER, Études sur les fausses décretals in Revue d'his-
toire cl. VII (Louvain, 1906), pp. 33-51; 301-16; 543-64;
761-781; VIII (1907), pp. 19-36.
LOUIS SALTET.
Falsity (Lat. Falsitas), a perversion of truth originating in the deceitfulness of one party, and culminating in the damage of another party. Counterfeiting money, or attempting to coin genuine legal tender without due authorization; tampering with wills, codicils, or such-like legal instruments; prying into the correspondence of others to their prejudice; using false weights and measures; adulterating merchandise, so as to render salable what purchasers would otherwise never buy, or so as to derive larger profits from goods otherwise marketable only at lower figures; bribing judges; suborning witnesses; advancing false testimony; manufacturing spurious seals; forging signatures; padding accounts; interpolating the texts of laws and precepts; and slipping in the pretended birth of supposititious offspring are among the chief forms of which this crime assumes. The punishment determined by the laws of former times for those convicted of it could scarcely savour of greater severity, or awaken a deeper horror of the crime itself. In the first place, the Roman law inflicted the death penalty on such evil-doers as were found guilty of falsifying imperial rescripts. Traces of this kind of legislation are still to be found in the Bull of Pius IX, "Apostolice Sedis", wherein the Holy See promulgates the sentence of excommunication specially reserved to the sovereign pontiff against all who dare to forge or interpolate Bulls, Briefs, and Rescripts of all kinds formulated in the name of the Holy Father, and signed either by the pope personally, by his vice-chancellor personally, or by his pro-curial for some other special commission thereunto by the sovereign pontiff himself. Moreover, whosoever are guilty of publishing spurious or supposititious papal Bulls, Briefs, or Rescripts, of the kind already specified, render themselves amenable to the same ecclesiastical penalty. The sentence of excommunication takes effect immediately, as the work of falsification becomes an accomplished fact, even though the false letters never pass into actual use. At the same time it must be noted, in passing, that as often as there is question of forging Apostolic Letters, the censure is not incurred prior to the actual publication of such letters. Those who are guilty, not of falsifying Apostolic Letters, but of defacing or falsifying, are already liable to excommunication, or to co-operating in such traffic, incur the sentence of excommunication reserved to the ordinary of the diocese. According to D'Annibale (Commentary on the Constitution "Apostolice Sedis", n. 81) those who retain forged or interpolated Apostolic Letters in their possession, those who order the production of such letters to others for co-operating therein, are not liable to the sentence of excommunication.

In cases other than those here outlined, the enormity of the crime was emphasized by the civil law in confiscating the property of culprits and condemning them to perpetual exile. Though time has by no means lessened the intrinsic heinousness of the crime itself, it has witnessed considerable mitigation in the punishment. The punishment reserved to excommunication is now the chief factor in determining the nature and the extent of punishment. While vicissitudes of time and place may suggest the expediency of modifications in the exigencies of positive law, there still remains an obligation which conscience always imposes on those guilty of this crime, an obligation to be made present in justice by a certain degree of repentance arising from changes occurring in time or circumstances of place. For this reason it is right to claim that as soon as the actual perpetration of this disorder begets injury to another party, the perpetrator of such damage is strictly bound in conscience to make good all such losses caused, or occasioned, by his fraud or deceit. This teaching meets with the unstinted approbation of moralists, notwithstanding the plausibility of a theory purporting to inculcate those who advance false testimony, but lifting from their shoulders the burden of repairing damages due to such false evidence. (See FORGERY.)

Family, a term derived from the Latin, *famulu*us, servant, and *familia*, household servants, or the household (cf. Oscan *families*, servant). In the classical Roman period the *familia* rarely included the parents or the children. Its English derivative was frequently used in former times to describe all the persons of the domestic circle, parents, children, and servants. Present usage, however, commonly excludes servants, and restricts the word *family* to that fundamental social group which the Roman law recognized union of one man with one woman, or of one or more men with one or more women, and their children. If the heads of the group comprise only one man and one woman we have the monogamous family, as distinguished from those domestic societies which live in conditions of polygamy, polyandry, or promiscuity.

Certain anthropological writers, such as Tozzi, as Bachofen (Das Mutterrecht, Stuttgart 1861), Morgan (Ancient Society, London, 1877), McLeannan (The Patriarchal Theory, London, 1885), Lang (Custom and Myth, London, 1885), and Lubbock (The Origin of Civilization and the Primitive Condition of Man, London, 1889), created and developed the theory that the original form of the family was one in which all members of a group, horde, or tribe, belonged promiscuously to all the men of the community. Following the lead of Engels (The Origin of the Family, Private Property, and the State, tr. from the German, Chicago, 1902), many Socialist writers have adopted this theory as quite in harmony with their materialistic interpretation of history. The chief considerations advanced in its favor are: (1) the recognition of the idea of individual property was common, and that this condition naturally led to community of women; certain historical statements by ancient writers like Strabo, Herodotus, and Pliny; the practice of promiscuity, at a comparatively late date, by some uncivilized peoples, such as the Indians of California and a few aboriginal tribes of India; the system of tracing descent and kinship through the mother, which prevailed among some primitive peoples; and certain abnormal customs of ancient races, such as religious prostitution, the so-called *jus primae noctis*, the lending of wives to visitors, cohabitation of the sexes before marriage, etc.

At no time has this theory obtained general acceptance, even among non-Christian writers, and it is absolutely rejected by some of the best authorities of to-day, e.g., Westermarck (The History of Human Marriage, London, 1901) and Letourneau (The Evolution of Marriage, tr. from the French, New York, 1888).

In reply to the arguments just stated, Westermarck and others point out that the hypothesis of primitive communism has by no means been proved, at least in its extreme form; that common property in goods does not necessarily lead to community of wives, since family and marriage relations are subject to other motives as well as to those of a purely economic character; that the testimonies of classical historians in the matter are inconclusive, vague, and fragmentary, and refer to only a few instances; that the modern cases of promiscuity are isolated and exceptional, and may be attributed to degeneracy rather than to primitive survivals; that the practice of tracing kinship through the mother finds ample explanation in other facts besides the assumed uncertainty of paternity, and that it was never universal; that the abnormal sexual relations cited above are more obviously, as well as more satisfactorily, explained by other circumstances, religious, political, and social, than by the hypothesis of promiscuity, and is essentially unsatisfactory. The evolution, which, superficially viewed, seems to support this hypothesis, is in reality against it, inasmuch as the unions between the male and the female of many of the higher species of animals exhibit a degree of stability and exclusiveness which bears some resemblance to that of the monogamous family.

The utmost concession which Letourneau will make to the theses under review is that "promiscuity may have been adopted by certain small groups, more probably by certain associations or brotherhoods" (op. cit., p. 44). Westermarck does not hesitate to say: "The hypothesis of promiscuity, instead of belonging, as Professor Giraud-Teudon thinks, to the class of hypotheses which are scientifically permissible, has no real foundation, and is essentially unsatisfactory" (op. cit., p. 133). The theory that the original form of the family was either polygamy or polyandry is even less worthy of credence or consideration. In the main, the verdict of scientific writers is in harmony with the Scriptural doctrine concerning the origin and the normal form of the family: "Wherefore a man shall leave father and mother, and shall cleave to his wife; and they twain shall be one flesh." (Matt., xix, 6). From the beginning, therefore, the family supposed the union of one man with one woman.

While monogamy was the prevailing form of the family before Christ, it was limited in various degrees among many peoples by the practice of polygyny. This practice was on the whole more common among the Semitic races than among the Aryans. It was more frequent among the Jews, the Egyptians, and the Medes, than among the people of India, the Greeks, or the Romans. It existed to a greater extent among the uncivilized races, although some of these were free from it. Moreover, even where there was no polygyny, marriage was sometimes or usually restricted to a small minority of the population, as the kings, the chiefs, the nobles, and the rich. Polyandry was likewise practised, but with considerably less frequency. According to Westermarck, monogamy was by far the most common form of marriage among the ancient peoples of whom we have any direct knowledge (op. cit., p. 120). On the other hand, divorce was in vogue among practically all peoples, and to a much greater extent than polygamy.

The case with which husband and wife could dissolve their union constitutes one of the greatest blots upon the civilization of classic Rome. Generally speaking, the position of woman was very low among all the nations, civilized and uncivilized, before the coming of Christ. Among the barbarians, Infanticide was frequently became a wife through capture or purchase; among even the most advanced peoples the wife was generally her husband's property, his chattel, his labourer. Nowhere was the husband bound by the same law of marital fidelity as the wife, and in very few places was he compelled to concede to her equal rights in the matter of divorce. Infanticide was practically universal, and the *potestas* of the Roman father gave him the right of life and death over even his grown-up children. In a word, the weaker members of the family were everywhere inadequately protected against the stronger.

The Christian Family.—Christ not only restored the family to its original type as something holy, per-
mament, and monogamous, but raised the contract from which it springs to the dignity of a sacrament, and thus placed the family itself upon the plane of the supernatural. The family is holy inasmuch as it is to co-operate with God by procreating children who are destined to be the adopted children of God, and by in- structing them for His kingdom. The union between husband and wife is to last until death (Matt., xix, 6 sq.; Luke, xvi, 18; Mark, x, 11; I Cor., vii, 10; see MARRIAGE, DIVORCE). That this is the highest form of the conjugal union, and the best arrangement for the welfare both of the family and of society, will appear to anyone who compares dispassionately its moral and material effects with those flowing from the possible alternative solutions. It would be a greater or a less extent among the majority of peoples from the beginning until now, there is abundant evidence that marriage has, upon the whole, become more durable in proportion as the human race has risen to higher degrees of cultivation" (Westermarck, op. cit., p. 335).

While the attempts that have been made to show that divorce is in every case forbidden by the moral law of nature have not been convincing on their own merits, to say nothing of certain facts of Old Testament history, the absolute indissolubility of marriage is nevertheless the ideal to which the natural law points, and consequently is to be expected in an order that is supernatural. In the family, as re-established by Christ, there is likewise recognized polygamy (see the references already given in this paragraph, and POLYGAMY). This condition, too, is in accord with nature's ideal. Polygamy is not, indeed, condemned in every instance by the natural law, but it is generally inconsistent with the reasonable welfare of the wife and children, and the proper moral development of the husband. Because of the qualities of procreation, the Christian family is monogamous, and the real and definite equality of husband and wife. They have equal rights in the matter of the primary conjugal relation, equal claims upon mutual fidelity, and equal obligations to make this fidelity real. They are equally guilty when they violate these obligations, and equally deserving of pardon when they repent.

The wife is neither the slave nor the property of her husband, but his consort and companion. The Christian family is supernatural, inasmuch as it originates in a sacrament. Through the sacrament of marriage husband and wife obtain an increase of sanctifying grace, and a claim upon those actual graces which are necessary to the proper fulfillment of all the duties of family life, and all the relations between husband and wife and their children. Thus the union of husband and wife, is seen in the injunction "So also ought men to love their wives as their own bodies. He that loveth his wife, loveth himself" (Eph., v, 28).

From these general facts of the Christian family, the particular relations existing among its members can be easily deduced. Since the average man and woman are not only physically equal but anatomically identical, and are therefore the two complementary parts of one social organism, in which their material, moral, and spiritual needs receive mutual satisfaction, a primary requisite of their union is mutual love. This includes not merely the love of the senses, which is essentially selfish, not necessarily that sentimental love which anthropologists call "passion", but also the all the emotional love or affection, which springs from an appreciation of qualities of mind and heart, and which im-
have full control over the rearing and education of the children, subject only to such State supervision as is needed to prevent grave neglect of their welfare. Hence it follows that, generally speaking, and with due allowance for particular conditions, the State exceeds its authority when it provides for the material wants of the child, removes him from parental influence, or specifies the school that he must attend. As a consequence of these concepts and ideals, the Christian family in history has proved itself immeasurably superior to the non-Christian family. It has exhibited greater fidelity between husband and wife, greater reverence for the parents by the children, greater protection of the weaker members by the stronger, and in general a greater freedom and exaltation of the duties and rights of all within its circle. Its chief glory is undoubtedly its effect upon the position of woman. Notwithstanding the disabilities—for the most part with regard to property, education, and a practically recognized double standard of morals—under which the Christian woman has suffered, she has attained to a height of dignity, respect, and authority for which she will look in vain in the conjugal society outside of Christianity. The chief factor in this improvement has been the Christian teaching on chastity, conjugal equality, the sacredness of motherhood, and the supernatural end of the family, together with the Christian model and ideal of family life, the Holy Family at Nazareth.

In the present day there is little sign of the same intention of some writers that the Church’s teaching and practice concerning married life, make for the degradation and deterioration of the family, not only springs from a false and perverse view of these practices, but contradicts the facts of history. Although she has always held virginity in higher honour than marriage, the Church has never sanctioned the extreme view, attributed to some ascetics, of the permanent injury inflicted by the marriage of the flesh, a sort of tolerated carnal indulgence. In her eyes the marriage rite has ever been a sacrament, the sealed state of the high, the family a Divine institution, and family life the normal condition for the great majority of mankind. Indeed, her teaching on virginity, and the spectacle of thousands of her sons and daughters exemplifying that teaching, have in every age inspired and exemplified the effects of that teaching in general, and therefore of chastity within as well as without the family. Teaching and example have combined to convince the wedded, not less than the unwedded, that purity and restraint are at once desirable and practically possible. To-day, as always, it is precisely in those communities where virginity is most honoured that the ideal of the family is highest, and its relations purest.

DANGERS FOR THE FAMILY.—Among these are the exaltation of the individual by the State at the expense of the family, which has been going on since the Reformation (cf. the Rev. Dr. Thwing, in Bliss, “Encyclopedia of Social Reform”), and the modern facility of divorce (see Divorce), which may be traced to the same origin. The latter is perhaps the most objectionable in general, and therefore of chastity within as well as without the family. Teaching and example have combined to convince the wedded, not less than the unwedded, that purity and restraint are at once desirable and practically possible. To-day, as always, it is precisely in those communities where virginity is most honoured that the ideal of the family is highest, and its relations purest.

Fano, Diocese of (Fanensis).—Fano, the ancient Fanum Fortunae, a city of the Marches in the province of Pesaro, Italy, took its name from a celebrated temple of Fortune, of which a statue is still preserved in a lighthouse, on the site now occupied by the church of Santa Lucia. Near this city, in 307 A.C., Claudius Nero defeated Hasdrubal; Augustus founded a colony there called Julia Fanensis; and, in 271, Aurelianus inftellated there the Alamanni. Ruins of the Temple of Fortune are still visible, also of a temple of Jupiter, the basilica designed by Vitruvius (De arch., V, i), and a triumphal arch of Augustus, enlarged by Constantine II in 340. Fano was part of the Pentapolis and with it passed in the eighth century under the domination of the Holy See. The Alberghetti governed it as magistrates during the thirteenth century. From 1306 the Malatesta ruled over it, but in 1463 Federigo di Montefeltro, Duke of Urbino, after having almost destroyed the city, expelled Sigismondo Malatesta. Later the Community held almost independent sway.

St. Peterianus is venerated as the first Bishop of Fano and is supposed to have been appointed Pope Sylvester I. St. Vitalis flourished in the time of Pope Symmachus (498–514). Eusebius accompanied Pope John I to Constantinople (526). Leo and St. Fortunatus belonged to the period of St. Gregory the Great. The date of St. Orus is uncertain. Among the later bishops were Riccardo (1214), persecuted by the magistrate Alberghetti; and the Dominican Pietro Bertano (1557), a distinguished orator and advocate at the Council of Trent. Fano is an exempt diocese (see Diocese) and has 55,275 inhabitants, 45 parish institutions, 13 free schools, 1 Pestiferous Institution for girls, 6 religious houses of men, and 8 of women.

U. BENIGNI.

Fanon, a shoulder-cape worn by the pope alone, consisting of two pieces of white silk ornamented with narrow wavy stripes of red and gold; the pieces are nearly circular in shape but somewhat unequal in size and are laid on the left shoulder and fastened at the bosom with a button.

The fanon is adorned with a small cross embroidered in gold.

The fanon is like an amice; it is, however, put on not under but above the alb. The pope wears it only when celebrating a solemn pontifical Mass, that is, only when all the pontifical vestments are used.

The manner of putting on the fanon recalls the method of assuming the amice universal in the Middle Ages and still observed by some of the older orders (see AMICE). After the deacon has vested the pope with the usual amice, alb, the cingulum and sub-unicitorium, and the pectoral cross, the pope remains on, but having opened the opening, the fanon and then turns the half of the upper piece towards the back over the pope's head. He now vests the pope with the stole, tunicle, dalmatic, and chasuble, then turns down that part of the fanon which had been placed over the head of the pope, draws the front half of the upper piece above the tunicle, dalmatic, and chasuble, and finally arranges the whole upper piece of the fanon so that it covers the shoulders of the pope like a collar.

The fanon is mentioned in the oldest known Roman Ordinal, consequently its use in the eighth century can be proved. It was then called analogolium (anagolium), yet it was not at that period a vestment reserved for the use of the pope. This limitation of its use did not appear until the other ecclesiasties at Rome began to put the vestment on under the alb instead of over it, that is, when it became customary assumption of the vestments in the use of the pope. This happened, apparently in imitation of the usage outside of Rome, between the tenth and twelfth centuries; however, the exact date cannot be given.

It is certain that as early as the end of the twelfth century the fanon was worn solely by the pope, as is evident from the express statement of Innocent III (1189-1216). They comment the fanon, because of its old name of fanon, from the late Latin fumus, derived from annus, anio, cloth, woven fabric, was not used until a subsequent age. Even as early as the eighth century the pope wore the fanon only at solemn high Mass. The present usage, according to which the pope is vested, in addition to the fanon, with an amice under the alb, did not appear, at the earliest, until the close of the Middle Ages.

As to the form of the fanon and the material from which it was made in early times no positive information exists. Late in the Middle Ages it was made of white silk, as is shown by the inventory of the year 1296 of the papal treasure, as well as by numerous works of art; the favourite ornamentation was one of favourite strips of red gold and silver, especially red, woven into the silk. Up to the fifteenth century the fanon was square in shape; the present collar-like form seems to have appeared about the sixteenth century or even later.

JOSEPH BRAN.

Faraud, Henri, titular Bishop of Anémour and first Vicar Apostolic of Athabasca-Mackenzie, Canada; b. 17 March, 1823, at Gigondas, France; d. at St. Boniface, Manitoba, 26 September, 1890. After admission to the juniorate of the Oblates of Mary Immaculate, and while still in minor orders, he was sent to the missions of Northern America, and ordained priest, 8 May, 1847, at St. Boniface, Manitoba. Then he replaced Father (afterwards Bishop) Lafôlette at Ile-A-la-Crosse, and in 1819 he proceeded further North, establishing the mission of Lake Athabasca, which he inaugurated 8 September, 1851. The following year, he visited Great Slave Lake, where no missionary had ever been, and ministered to the Indians of Peace River (1858–59). On the 13th of May, 1862, he was made titular of the newly created Vicariate Apostolic of Athabasca-Mackenzie; but such was his isolation from the civilization world, that he did not know of it before July of the following year.

MGR. GUEBERT, of Tours, consecrated him Bishop of Anémour, 30 Nov., 1864, a title he bore for twenty-five years, during which he evidenced considerable administrative abilities, founding missionary posts as far as the Frozen Ocean, on the one side, and the Peace and Liard Rivers, on the other. In 1853 he returned to France, for the General Chapter of his Congregation. In 1889 he was one of the Fathers of the Provincial Council of St. Boniface, at the termination of which his growing infirmities prevented him from returning to his distant missions in the North.

Farfa, Abbey of, situated about 26 miles from Rome, not far from the Farfa Sabina Railway station. A legend in the "Chronicle of Farfa" relates the foundation of the Abbey of Farfa in the time of the Emperors Julian or Gratian, by the Syrian Saint Silvestrianus, who had come to Rome with his sister, Susanah, and had been made Bishop of Spoleto. The legend goes on to say that he afterwards became enamoured of the monastic life, and chose a wooded hill near the Farfa stream, a tributary of the Tiber, on which he built a church to Our Lady, and a monastery.
Archeological discoveries in 1888 seem to prove that the first monastic establishment was built on the ruins of a pagan temple. This first monastery was devastated by the Vandals in the fifth century, doubtless about the year 457.

In the seventh century, a wave of monasticism from the North spread over Italy. The foundation of Bobbio by St. Columbanus, and the foundation of Farfa by monks from Gaul, about 681, heralded a revival of the great Benedictine tradition in Italy. The "Confessio Monasterii Farfensis", a writing which dates probably from 857, contains a list of the abbots of the principal founder Thomas de Maurienne; he had made a pilgrimage to Jerusalem and spent three years there. While in prayer before the Holy Sepulchre, Our Lady in a vision warned him to return to Italy, and restore Farfa; and the Duke of Spolète, Faroald, who also had had a vision, was commanded to aid in this work. At a very early date we find traces of this legend in connexion with the foundation by three nobles from Beneventum of the monastery of St. Vincent on the Volturno, over which Farfa claimed jurisdiction. Thomas died in 720; and for more than a century Frankish abbots ruled at Farfa.

The Lombard chiefs, and later the Carolingians, succeeded in withdrawing Farfa from obedience to the Bishop of Spolète. Farfa, however, held its privileges for the monastery. If we may credit the "Chronicon Farfense", Farfa was at this period the most important monastery in Italy both from the point of view of worldly possession and ecclesiastical dignity, with the exception of Nonantula. It had one large basilica church and five smaller ones, rich in masterpieces of religious orlay. The zeal of the Saracens was excited: and about 890, during the government of Abbot Peter, they swooped down on the place. Peter held out against them for seven years, and then resolved to abandon the monastery. He divided his monks into three sections and shared the abbey's wealth among them—one section he sent towards Rome, one towards Rieti, and one towards the county of Permo. The Saracens preserved Farfa as a stronghold, but some Christian robbers set fire to it by mistake.

Between 930 and 963, it was rebuilt by Abbot Ratfredus, who was afterwards poisoned by two wicked monks, Campo and Hildebrand, who divided the wealth of the abbey between them, and ruled over it until 975. In the Roman Notitia ecclesiastica the Roman abbot of Cluny to reform Farfa and other monasteries. Campo was driven out; and a holy monk named Dagibert took his place. At the end of five years, he also died by poison—and the moral condition of Farfa was once more deplorable. The monks robbed the altars of their ornaments, and led lives of unbridled vice.

Abbot John III, consecrated, about 967, by the pope, succeeded, owing to the protection of the Emperor Otho, in re-establishing a semblance of order. But the great reformer of Farfa was Hugues (998–1010). His nomination as abbot was not secured without simony—but the success of his government sallies the vice of his election. At his instance, Odillo, Abbot of Cluny, and William, Abbot of Dijon, visited Farfa, and re-established there the love of piety and of study.

The "Cronicon Farfense" drawn up about 1010 under the supervision of Guido, successor to Hugues, and recently published by Albers, bear witness to the care with which Hugues organized the monastic life at Farfa. Under the title "Destructio Monasterii", Hugues himself wrote a history of the sad period previous to his rule; and again under the title "Diminutio Monasterii", and "Querimonium", he relates the temporal difficulties that encompassed Farfa owing to the ambition of petty Roman lords. These works are very important for the historian of the period.

One of Hugues's successors, Berard, Abbot from 1049 to 1059, made the abbey a great seat of intellectual activity. The monk, Gregory of Catino (b. 1000) arranged the archives. To substantiate his claims, and the rights of its monks, he edited the "Regesto di Farfa", or "Liber Gemma/raphus sive Cleronomialis ecclesiae Farfensis" composed of 1324 documents, all very important for the history of Italian society in the eleventh century. Ugo Balzani praised the accuracy and exactness of this work "planned", he says, "along lines quite in harmony with the best ancient style", and very suitable for all the monasteries, or grants, made by the monastery to its tenants. Having collected all this detailed information, he set to work on a history of the monastery, the "Chronicon Farfense"; and when he was 70 years old, in order to be able to devote himself to his literary work he compiled a sort of index which he styled "Liber Floriger Chartarum cenobii Farfensis". Gregory was a man of real learning, remarkable in that, as early as the eleventh century, he wrote history with accuracy of view-point, and a great wealth of information.

The monks of Farfa owned 683 churches or convents; two towns, Centumcellas (Civitavecchia) and Alatri; 132 castles, 36 streets, 14 mills, 14 mines; 82 mills; 315 hamlets. All this wealth was a hindrance to the religious life once more, between 1119 and 1125. And Farfa was troubled by the rivalry between Abbot Guido, and the monk Berard who aimed at being abbot. During the Investiture farce, Farfa was, more or less, on the side of the "Ghibellines". The Ghibelline "grande imperialis", written in support of the Ghibelline party, is, according to Bethmann, the work of Gregory, and of one of his disciples, according to Balzani. The collection of canonical texts contained in the "Regesto", which has been studied by Paul Fournier, seems to omit purposely any mention of the canonical texts of the reforming popes of the eleventh century. But when, in 1262, the victory of the popes over the last of the Hohenstaufen put an end to Germanic sway in Italy, Farfa sought the protection of Urban IV, as we learn from a privilege granted on 23 Feb., 1262, and published by Jean Guiraud. At the end of the fourteenth century the Abbey of Farfa became a cardinalatial in commendam (q. v.), and since 1842 the Cardinal Bishop of Farfa, a prelate of the Roman Curia, bears also the title of Abbot of Farfa.

Fargo (Fargus), Diocese of (Fargensis), suffragan of St. Paul, U. S. A., embracing the whole of the State of North Dakota, an area of 70,195 square miles. It was established in 1889.

The first Mass in the territory now comprised in the Diocese of Fargo, was celebrated in Pembina, September, 1818, by Rev. Severo Joseph Norbert Dau/molin, one of the two missionaries sent to the Selkirk Mission by Bishop Philip of Quebec. Father Dau/molin was born in Montreal, 5 Dec., 1793, ordained priest in the Nicolet Seminary, 23 Feb., 1817, left Quebec for the Selkirk colony, 19 May, 1818, and arrived at Fort Douglas (now St. Boniface, Manitoba), 16 July, 1818. In August, 1823, Father Dumolin returned to Can.
ada, where he died in 1853. The name of the diocese was originally Jamiestown, which title was suppressed by the Holy See, 6 April, 1897, and changed to Fargo in accordance with the bishop's request. At its formation the diocese contained a population of 19,000, of whom nearly 8000 were Indians and half-breeds. The population (1908) is about 71,000.

With the creation of the diocese the Rev. John Shanley was named its first bishop. He was born at Albion, New York, 4 Jan., 1852, and ordained priest 30 May, 1874, at Rome. His consecration as bishop took place at St. Paul, 27 Dec., 1889. There were then in the diocese 30 priests, 40 churches, an academy for girls, and a school for boys at St. Paul, which was already (1909) in the diocese a mitred abbot, 110 priests, 215 churches, 15 parochial schools, 4 Indian schools, 5 hospitals, an orphanage, a college for boys, and 6 academies for girls. In eighteen years the number of priests quadrupled and the number of churches more than quintupled.

The Benedictine Fathers have an abbey at Richardson, and a place at Devil's Lake, from which points they attend several missions. Connected with the Richardson Abbey is a college for boys. The Benedictine Sisters are in charge of several schools, and the Presentation Nuns in charge of schools and orphanages. Other communities are: Sisters of Mercy (hospital and schools); Sisters of St. Joseph (hospitals and school); Sisters of Holy Cross (green school); Sisters of Mary of the Presentation (schools).

**John Shanley.**

Faribault, George-Barthelemy, archeologist, b. at Quebec, Canada, 3 Dec., 1789; d. 22 Dec., 1866. He was a first cousin of Jean-Baptiste, founder of the city of Faribault, Minn. After completing the seven years' school taught by a Scotch veteran of Wolfe's army, he completed by personal efforts the course preparatory to the study of law and was admitted to the Bar in 1811. In 1812 he served as a militiaman during the invasion of Canada by the Americans. In 1822 he entered the civil service, attaining in 1832 the rank of assistant clerk of the Supreme Court of Canada at Montreal (1840). He was a correspondent of the American Journal of Science, and composed a work on the geography of the lower Mississippi River. At the conclusion of his course he was sent to the United States, where he resided for many years in the early 1840's, and later for several years in the 1850's. He spent all his leisure in collecting documents and books pertaining to Canadian history. His fine collection (1700) of rare books and original manuscripts perished at the burning of the Parliament House in Montreal (1849). He courageously began a second collection (1858) which he bequeathed to Laval University. Faribault published no original works, merely reproducing and annotating a series of rare historical papers in the transactions of the Quebec Literary and Historical Society, of which he was one of the chief promoters and benefactors. His principal publication is the "Catalogus Rerum de rebus Austriacis in bibliothecis publicis, bibliophiliacal, critical, and literary notes (Quebec, 1837), which, although superseded by a few later catalogues, ranks among the best. In 1859 he realized the long-postponed plan, conceived in 1761 by Montcalm's companions in arms, of erecting a memorial tablet over the soldier's grave. The epitaph, written by the French Academy at the time the subject was first brought up and approved by William Pitt, was duly inscribed. In private life Faribault was the type of the Christian gentleman, modest, hospitable, and charitable. He counted none but friends, and left the record of a blameless career, devoted to the service of God and country.

**Lionel Lindsay.**

Faribault, Jean-Baptiste, trader with the Indians and early settler in Minnesota, U. S. A.; b. 19 October, 1774, at Berthier, Lower Canada; d. at Faribault, Minnesota, 20 August, 1860. His father Barthélemy Faribault, a lawyer of Paris, France, settled in Canada towards the middle of the eighteenth century, and served as military secretary to the French army in Canada. After the occupation of the country by the English he retired to private life in Berthier and held the office of notary public. Young Jean-Baptiste received a good school education, and after several years of mercantile employment at Quebec, entered the service of the Northwest Fur Company. In May, 1798, he went with others to the island of Mihelich-mackine or Mackinac, one of the last depots of the company. For several years he traded with the Potawatomie Indians at Kankakee, with the Dakota or the Sioux Indians at Redwood, on the Des Moines river, and at Little Rapids, on the St. Peter or Minnesota river. During his residence at Little Rapids, in 1805, he was married to Pelagia Hanse, a half-breed daughter of Major Hanse. In 1809, he settled in the small village of Prairie du Chien, Wisconsin, and commenced trading, on his own account, with the Indian tribes of the Winnebagoes, Foxes, and Sioux. In addition to that he conducted an exchange of lead with Julien Dubuque, at the point now occupied by the city of that name. During the war with England (1812–14) Faribault refused to enlist in the English army, and suffered imprisonment and the loss of his goods in consequence. After the conclusion of the war, in 1815, he became a citizen of the United States, and recommended his trade at Prairie du Chien. In 1819, he removed to Pike Island in the Mississippi River, and in 1826 to the village of St. Peter, or Mendota, Minnesota, opposite the military post of Fort Snelling. There he remained until the last years of his life, when he was removed to the village of Faribault, Minnesota. A county in southern Minnesota was named after him, and the city of that name after his eldest son. Faribault was always kind and generous to the Indians, and tried to elevate them by teaching them the useful arts of life, and by instilling into them the principles of Christianity. He was much attached to the Catholic faith of his childhood and presented a house for a chapel to Father Lucien Galtier, the first resident missionary in Minnesota (1840).

**Francis J. Scheffer.**

Farinato, Paolo, an Italian painter, b. at Verona, 1524; d. there, 1600. He belonged to the old Florentine family of Farinato degli Uberti, the famous head of the Gibelline party, whom Dante placed in his *Inferno*. When the Guelfs triumphed, the Uberti were expelled and part of the family settled at Verona; it was to this branch that the painter belonged. In his native town his vocation was that of a barber,-priest. He was a careful student of the art of catching and preserving the characteristic mannerisms of Italian painting, curious as to the etching and the half-tone, and was his chief occupation to perpetuate the characteristics which he had found on the various works done for the Venetian masters, Giovanni Bellini, Giorgione, and Titian, and were to great advantage in the time of Verona, the Venetian masters, Giovanni Bellini, Giorgione, and Titian, and had just brought about a great artis-
The Veronese School, on the contrary, less concerned with the higher walks of art, and untrained in the quest of lofty ideals, seized straightway on colouring as the language best suited to express its own temperament. Colouring soon became its unique preoccupation; and it was from this school the greatest colourist and painter of all time was to come forth, if the measure of greatness among painters be judged by their power in speaking in colour, Paolo Calari, of Verona, known as Veronese. It is on this account that Giolino and his pupils, Brusasori and Farinato, are of such interest in the history of art. It is in their works that we note the blending of the two styles, and the use of colouring as an exclusive source of pleasure in painting: they were the heralds of Veronese and his immediate progeny. His principal works are preserved. 

In this transformation Farinato played a very important part. He was deeply versed in the art of fresco, and like Liberale, he was largely occupied on the decorations of the façades of the houses in Verona, which give that town and its famous Piazza dell’Erbe so winsome and engaging an appearance. Unfortunately, Farinato did not remain faithful to his native genius. At Mantua he fell under the influence of Giulio Romano, who, with his own captivating though vulgarising style, had just settled there the pageant of Raphael. It was under this influence that Paolo executed his “St. Martin” in the Blessed Sacrament Chapel of the cathedral at Mantua: and from this time onward his works betray for the most part a hybrid compromise between the corrupt Roman style and the light impressionism of colouring of Veronese. In Mantua and Verona his principal works are preserved. In Santa Maria in Organo, a “Massacre of the Innocents” (1556), and a “Christ Walking on the Waters” (1558); in San Tommaso, a “Glorification of the B. Virgin” (1560); in Sant’ Anastasia, a “Pentecost” (1585), and in San Giorgio in Braida, a “Multiplication of the Laves” (1600).

Though four years older than Veronese, Farinato survived him by nearly twenty years, and was over eighty when he died. He was a most prolific painter and many of his works have found their way to other lands. In the United States there are two or three, one at Cleveland, in the Holden Collection, an allegory of “Autumn”; one at New Haven in the Jarvis Collection, “Christ Appearing to Some Saints”; and one at New York in the Frick Collection, “Driving away Hagar.” The famous painting in the Louvre, representing “The Council of Trent,” and generally attributed to Titian, has been assigned to Farinato by Berenson.

For the elder see Paul III, Pope. The younger, Alessandro Farinato, eldest son of Pier Luigi Farinato, first Duke of Parma and brother of Pope Paul III, was born 7 Oct. 1520, and died at Rome, Feb. 1589. While yet a student at Bologna, in 1534, Clement VII appointed him administrator of the Diocese of Parma; on 13 Dec. of the same year, his uncle, Paul III, created him Cardinal-Deacon of Sant’ Agostino, and conferred on him numerous offices and benefices. Thus, he was Vice-Chancellor of the Holy Roman Church, Governor of Tivoli, Archpriest of St. Mary Major’s, Archpriest of St. Peter’s, Administrator of Jaen, Spain, of Vizun, Portugal, of Wurzburg, Germany, and of Avignon, France. In 1556 he was made Bishop of Monreale, Sicily, where, in 1552, he founded a Jesuit College, and, in 1559, convoked and presided at the Council of Trent. He was also Bishop of Massa (1538), and Archbishop of Tours (1553), later exchanging this see for that of Cahors, from which he resigned in 1557; Bishop of Benevento (1556); of Montebascone (1571); finally Cardinal-Bishop of Ostia and Velletri (1580). He was papal legate for the province of the Patrimony, and after the fall of the county of Avignon, where he displayed great administrative ability, especially during the plague of 1541.

He was very zealous in behalf of the poor. Farinata was employed by the popes on various legations and embassies. In 1539, he was legatus a latere of Paul III at the court of Charles V, to make peace between Emperor and Pope, but they signed the Peace of Augsburg without his advice, and, with his invitation to join the Alliance of England, also to arrange for a general Council. In 1543 he went again to the court of Charles V, and later to that of Francis I, and was present at the meeting of the two sovereigns in Paris, returning with Charles to Flanders. In the war between his brother Ottavio, Duke of Parma, and Pope Julius III, he prudently held aloof, first at Florence and then at Metz; but in 1547, at the instigation of the English, he was sent as a legate to the court of Charles V in reference to the council, and in 1546 he accompanied the pontifical troops sent to the aid of Charles V against the Smalkald League. In 1550, he was one of the candidates for the papacy. Charles V greatly admired his virtues and sagacity. Farnese was an ardent promoter of the Tridentine reforms and a state of the Church. He was interested in the arts, and especially ecclesiastical. He used to say that “there is nothing more desirable...
than a cowardly soldier or an ignorant priest”. He patronized the architect Vignolo, to whom he entrusted the construction both of the church of the Gesù in Rome, of which he laid the corner-stone in 1568, and of the superb Farnese palace of Caprarola near Lago Bracciano. He restored the monastery of Tre Fontane, where he had the chapel of Santa Maria Scuola Coeli erected; and he had the ceiling of San Lorenzo in Damasco magnificently painted. He had himself buried in front of the high altar in the church of the Gesù.

Faro, Diocese of (Pharensis), suffragan of Evora, Portugal, and extending over the province of Algarve. The see was founded at Ossosoba in 300, where Flavia placed into the hands of the Moors, in 688, the see was suppressed. It was restored in 1188 at Silves, and in 1218 was made suffragan to Braga, then to Seville, in 1393 to Lisbon and finally, in 1540, to Evora. The title was transferred to Faro, 30 March, 1577. Faro is the chief seaport town of the province, and is located on the Rio Fermo, near its mouth. The cathedral, an imposing structure, with nave-vaulting springing from lofty cylindrical columns, is apparently a Roman basilica altered by the Moors. Several convents, a hospital, and charitable institutions are well appointed. There are 66 parishes, 214 churches, 112 priests and 225,384 Catholics in the diocese.

Faroe Islands.—Geography and Statistics.—A group of Danish islands rising from the sea the same four hundred miles west of Norway and almost as far south of Iceland. It consists of fourteen inhabited islands, several uninhabited islands with an area of 500 square miles. Of this one-third belongs to Strömó. This archipelago is divided by a number of small sounds and consists of dark grey rocks which form plateaux usually about 300 yards high. These plateaux slope towards the sea, are fissured by streams and are here and there surmounted by lofty peaks (Slettarfjordan, over 2400 ft.). The sky is usually cloudy, showers and storms are frequent. The surging waves make navigation dangerous especially in winter. The climate is oceanic, but as the summer heat rarely rises above 10° and the soil is poor, agriculture is possible only in sheltered spots. Trees are few in number, but shrubs flourish in more abundance. The chief wealth and attraction of the islands are found in their flowery pastures, while the herds of sheep which graze upon them have given their name to the archipelago. Upwards of 100,000 of these animals live always in the open air and are famous for the superior quality of their wool. A few small, raw-boned horses are employed solely as beasts of burden, for roads are unknown. In July and August the fishing season is opened and the attention is paid to the horned cattle, which number about 5000. Besides the above-mentioned quadrupeds, rats and mice are the only land animals or mammals to be found. Many species of birds and in great numbers haunt the islands. The surrounding waters abound in delicious fish and whales and dolphins rich in blubber. The yearly catch of the round-headed dolphin (the Grind) amounts to a thousand. Reptiles and frogs are unknown, and there are but few insects.

The 16,000 inhabitants of the Faroe Islands are all Lutherans. They speak a dialect akin to the Old Norse, but Danish is used in public life, the schools, and the churches. The fisheries, cattle-breeding, and the more perilous bird-catching are the chief sources of income. The few local industries scarcely suffice for the needs of the natives. Turf is used for fires, there being no coal. There is considerable commerce. The exports are fish, blubber, meat, wool, feathers, and down; the imports are wood, coal, and large quantities of cereals and fruit. Thorshavn on Strömó is the capital and seat of government, and has a Real schule, or technical school. Throughout the rest of this island there are only wooden huts covered with turf.

Pius Wittman.

Fast, in general abstinence from food or drink, a term common to the various Tentonic tongues. Some derive the word from a root whose primary significance means to hold, to keep, to observe or to restrain one's self. The Latin term jejunium denotes an animal intestine which is always empty. Such abstinence varies according to the measure of restriction observed: from complete fasting or from certain foods. It may denote abstinence from all kinds of food and drink for a given period. Such is the nature of the fast prescribed by the Church before Holy Communion (natural fast). It may also mean such abstinence from food and drink as is dictated by the bodily or mental dispositions peculiar to each individual, and is known as an ordinary or habitual one. From this manner the term comprehends penitential practices common to various religious communities in the Church. Finally, in the strict acceptation of the term, fasting denotes abstinence from food, and as such is an act of temperance finding its raison d'être in the dictates of natural law and its full perfection in the requirements of positive ecclesiastical legislation.

In Christian antiquity the Eustathians (Sozomen,
Hist. Eccl. II, 33) denied the obligation, for the more perfect Christians, of the Church fasts; they were condemned (380) by the Synod of Gangra (can. xiv), which also asserted incidentally the traditional antiquity of the ecclesiastical fasts (Hefele-Lerlerd, Hist. des Concles, French tr. Paris, 1908, I, p. 1041). Contrary to the groundless assertions of these sectaries, moralists are one in maintaining that a natural law inculcates the necessity of fasting because every rational creature is bound to labour intelligently for the subjugation of concupiscence. As a consequence, rational creatures, logically connected with this end, are commensurate with the attainment of this end (see Mortification). Amongst the means naturally subserving this purpose fasting lays claim to a place of primary importance. The function of positive law is to intervene in designating days whereon this obligation must be observed, as well as the manner in which the same obligation is to be discharged on days authoritatively appointed.

What pertains to the origin as well as to the historical development of this obligation in the Church may be gleaned easily from the articles on Abstinence and Black Fast. The law of fasting, ecclesiastical in its genius, is unwritten in its origin, and consequently must be understood and applied with care, as the customs are generally local in places. See the corresponding historico-archaeological articles in the various modern dictionaries and encyclopedias of Christian Archaeology, e. g. Martigny, Kraus, Smith and Cheetham, Cabrol and Leclercq. Details will be found under Advent; Lent; Friday, Saturday; Vigil; Ember Days.

In the United States of America all the days of Lent; the Fridays of Advent (generally); the Ember Days; the vigils of Christmas and Pentecost, as well as those (14 Aug.) of the Assumption; (31 Oct.) of All Saints, are now fasting days. In Great Britain, Ireland, Australia and Canada, the days just indicated, together with the Wednesdays of Advent and (26 June) the vigil of Saints Peter and Paul, are fasting days. Fasting essentially consists in eating but one full meal in twenty-four hours and that about midday. It also implies the obligation of abstaining from flesh meat during the same period, unless legitimate authority grants permission to eat meat. The quantity of food allowed at this meal has never been made the subject of positive legislation. Whosoever therefore eats a hearty or sumptuous meal in order to bear the burden of fasting must impose on himself the obligation of fasting. For any excess during the meal militates against the virtue of temperance, without jeopardizing the obligation of fasting.

According to general usage, noon is the proper time for this meal. For good reasons this hour may be legitimately anticipated. Grievous sin is not committed even though this meal is taken a full hour before noon without sufficient reason, because the substance of fasting, which consists in taking but one full meal a day, is not imperilled. In like manner, the hour for the midday meal and the collation, may for good reasons be conscientiously inverted. In many of our larger cities this practice now prevails. According to D'Amable (Summulae Theologiae Moralis, 4 ed., 111, 134) and Nolde (Summulae Moralis, 1674) good reasons justify one in taking a collation in the morning, dinner at noon, and the morning allowance in the evening, because the substance of fasting still remains intact. Nothing like a noteworthy interruption should be admitted during the course of the midday meal, because such a break virtually forms two meals. Consequently, taking into consideration individual intention and the duration of the interruption, must finally determine whether a given interruption is noteworthy or not. Ordinarily an interruption of one half hour is considered slight. Nevertheless, an individual, after having commenced the midday meal and meeting with a bona fide interruption lasting for an hour or more is fully justified in resuming and finishing the meal after the termination of an interruption. Finally, unless special reasons suggest the contrary, it is not allowed to cut immediate length to the time of this meal. Ordinarily, a duration of more than two hours is considered immediate in this matter.

Besides a complete meal, the Church now permits a collation usually taken in the evening. In considering this point proper allowance must be made for what custom reasonably and legally adds to the nutritive and the quality of viands allowed at this repast. In the first place, about eight ounces of food are permitted at the collation even though this amount of food would fully satisfy the appetites of some persons. Moreover, due attention must be paid to each person's temperament, duties, length of fast, etc. Hence, much more food is allowed in cold than in warm climates, more to those working during the day than to those at ease, more to the weak and hungry than to the strong and well fed. As a general rule whatever is deemed necessary in order to enable people to give proper attention to their duties may be taken at the collation. Moreover, since custom first introduced the collation, the usage of each country must be considered. The same reason dictates the allowance thereto. In some places eggs, milk, butter, cheese and fish are prohibited, whilst bread, cake, fruit, herbs and vegetables are allowed. In other places, milk, eggs, cheese, butter and fish are permitted, owing either to custom or to Indul. This is the case in the United States. However, in order to form judgments perfectly safe concerning this point, the Lenten regulations differ in each diocese. Finally, a little tea, coffee, chocolate or such like beverage together with a morsel of bread or a cracker is now allowed in the morning. Strictly speaking, whatever may be classified under the head of liquids may be taken as drink or medicine at any time of the day or night on fasting days. Hence, water, lemonade, soda waters, ginger ale, wine, beer and similar drinks may be taken on fasting days outside meal time even though such beverages may, to some extent, prove nutritious. Coffee, tea, diluted chocolate, electuaries made of sugar, juniper berries, and citron may be taken on fasting days, outside meal time, as medicine by those who find them conducive to health. Honey, milk, soup, broth, oil or anything else having the nature of food is not considered fasting. Of course, the words already specified. It is impossible to decide mathematically how much food is necessary to involve a serious violation of this law. Morals as well as canons concur in holding that an excess of four ounces would seriously militate against the obligation of fasting, whether that much food was consumed at once or at various intervals during the day, because Alexander VII (18 March, 1660) condemned the teaching of those who claimed that food so taken was not to be regarded as equalling or exceeding the amount allowed (Denzingher, Enchiridion Symbolorum et Definitionum, tenth ed. Freiburg in Br., 1908, No. 1129).

Though Benedict XIV (Constitutions, Non Ambignitius, 31 May, 1741; In superna, 22 Aug., 1741), granted permission. Eun. Moralis, 300, 304a; but on fasting days, he distinctly prohibited the use of fish and flesh at the same meal on all fasting days during the year as well as on Sundays during Lent. (Letter to the Archbishop of Compostella, 10 June, 1745, in Buecronei, Enchiridion Morale, No. 147). This prohibition binds all exempted from fasting either because they are compelled to labour or because they are not twenty-one years old. Furthermore this prohibition extends to those allowed meat on fasting days either by dispensation or by Indul. Sin is committed each time the prohibited action takes place.

The ecclesiastical law of fasting embodies a serious
obligation incumbent on all baptized individuals capable of assuming obligations provided they have completed their two years of age and are not otherwise excused. This doctrine is merely a practical application of a universally accepted principle of moralists and canonists whereby the character of obligation in human legislation is deemed serious or light in so far as the material element involved in the law bears or does not bear a close and intimate relation to the attainment of the whole end of the fast. Injunctions considered as a function of the virtue of temperance bear such a relation to the promotion of man's spiritual well-being (see Lenten Precepts in the Roman Missal), it certainly embodies an obligation generally serious. To this a priori reason may be added what Church history unfolds concerning the grave penalties attached to transgressions of this law. The sixty-ninth of the Apostolic Canons (see CANONS, APOTOLIC) decrees the degradation of bishops, priests, deacons, lectors or chanters, failing to fast during Lent, and the excommunication of laymen, who fail in this way. The fifty-sixth canon of the Trullan Synod (692) contains similar regulations. Finally Alexander VII (24 Sept., 1695) condemned a proposition formulated in the fol-1012 lowing way: 'The obligation to abstain from meat to which he is bound does not sin mortally unless he acts through contempt or disobedience (Denzinger, op. cit., no. 1123). Though this obligation is generally serious, not even infraction of the law is mortally sinful. Whenever transgressions of the law fail to do substantial violence to the law, venial sins are committed. Inability to keep the law of fasting and inability to fast (by reason of an extreme physical state in life) suffice by their very nature, to extinguish the obligation because as often as the obligation of positive laws proves extremely burdensome or irksome the obligation is forthwith lifted. Hence, the sick, the infirm, convalescents, delicate women, persons sixty years old and over, families whose members cannot have fasting as a full meal at the same time, or who have nothing but bread, vegetables or such like viands, those to whom fasting brings loss of sleep or severe headaches, wives whose fasting incurs their husbands' indignation, children whose fasting arouses their parents' wrath; in a word, all who cannot comply with the obligation of fasting without undergoing more than ordinary hardship, are excused as being unable to fulfill the obligation. In like manner unusual fatigue or bodily weakness experienced in discharging one's duty and superinduced by fasting lifts the obligation of fasting. However, not every sort of labour, but only such as is hard and protracted, excuses from the obligation of fasting. These two conditions are not confined to manual labour, but may be equally verified with regard to brain work. Hence bookkeepers, stenographers, telegraph operators, legal advisers and many others whose occupations are largely mental are entitled to exemption on this score, quite as well as day-labourers or tradesmen. When these two causes begetting exemption by their very nature, do not exist, lawfully constituted superiors may dispense according to what seems good to them. Accordingly the Sovereign Pontiff may always and everywhere grant valid dispensations from this obligation. His dispensations will be licit when sufficient reasons underlie the grant. In particular cases and for good reasons, bishops may grant dispensations in their respective dioceses. Unless empowered by Indult they are not at liberty to dispense all their subjects simultaneously. It is to be noted that usually bishops issue just before Lent circulars or pastoral letters, which are read to the faithful or otherwise made public, and in which they make known, on the authority of the Apostolic See, the actual status of obligation, dispensations, etc. Priests charged with the care of souls may dispense individuals for good reason. Superiors of religious communities may dispense individual members of their respective communities provided sufficient reason exists. confessors are not qualified to grant these dispensations unless they have been explicitly delegated thereto. They may, however, decide whether sufficient reason exists to lift the obligation.

Those who have permission from the Holy See to eat meat on prohibited days, may avail themselves of this concession at their full meal, not only on days of fasting but fasting days. When according to the law of fasting, or law of labour or labour releases Christians from fasting, they are at liberty to eat meat as often as they are justified in taking food, provided the use of meat is allowed by a general indulct of their bishop (Sacred Penitentiary, 16 Jan., 1834). Finally, the Holy See has repeatedly declared that the use of lard allowed by Indult comprehends butter or the fat of any animal.

No student of ecclesiastical discipline can fail to perceive that the obligation of fasting is rarely observed in its integrity nowadays. Conscious of the conditions of our age, the Church is ever shaping the requirements of this obligation to meet the best interests of her children. At the same time, no measure of leniency in this respect can eliminate the natural and frequent occurrence of transgressions. The first sin on a man on account of sin and its consequences.

Fast among Mohammedans. See RAMADAN.

Fasti Siculi. See Chronicon Paschale.

Fatalism is an aspect of the view which holds that all events in the history of the world, and in particular, the actions and incidents which make up the story of each individual life, are determined by fate. The theory takes many forms, or, rather, its essential feature of an antecedent force rigidly predetermining all occurrences enters in one shape or another into many theories of the universe. Sometimes in the ancient world fate was conceived as an iron necessity in the nature of things, overruling and controlling the will and power of the gods themselves. Sometimes it was explained as the inexorable decree of the gods directing the course of the universe; sometimes it was personified as a particular divinity, the goddess or goddesses of destiny. Their function was to secure that each man's lot, 'share', or part should infallibly come to him from the hand of fate.

Ancient Classical Fatalism.—The Greek tragedians frequently depict man as a helpless creature borne along by destiny. At times this destiny is a Nemesis which pursues him on account of some crime committed by his ancestors or himself; at other times it is to compensate for his excessive good fortune in order to educate and humble him. With Æschylus it is of the nature of an un pitying destiny; with Sophocles, that of an overruling personal will. Still, the most important feature is that the future life of each individual is so rigorously predetermined in all its details by an antecedent external agency that his own volitions or desires have no power to alter the course of events. The action of fate is blind, arbitrary, relentless. It moves inexorably onwards, effecting the most terrible
catastrophes, impressing us with a feeling of helpless consternation, and narrowing our moral sense, if we venture upon a moral judgment at all. Fatalism in general has been inclined to overlook immediate antecedents and to dwell rather upon remote and external causes as the agency which somehow moulds the course of events. Socrates and Plato held that the human will was necessarily determined by the intellect. Though this view seems incompatible with the doctrine of free will, it is not necessarily fatalism. The mechanical theory of Democritus, which explains the universe as the outcome of the collision of material atoms, mechanically imposes a fatalism upon human voluntary action and the law of consequences. As Epicurus introduced the atomic theory, though essentially a chance factor, seems to have been conceived by some as acting not unlike a form of fate. The Stoics, who were both pantheists and materialists, present us with a very thorough-going form of fatalism. For them the course of the universe is an iron-bound necessity. There is no room anywhere for chance or contingency. All changes are but the expression of unchanging law. There is an eternally established providence overruling the world, but it is in every respect immutable. Nature is an unbreakable chain of cause and effect. Providence is the hidden reason contained in the chain. Destiny or fate is the external expression of this providence, or the instrumentality by which it is carried out. It is owing to the chain that the power of an infallible prediction of all that will come to pass was ascribed to the gods. Cicero, who had written at length on the art of divining the future, insists that if there are gods there must be beings who can foresee the future. Therefore the future must be certain, and, if certain, necessary. But the difficulty then presents itself: what is the use of divination if expiatory sacrifices and prayers, a form of external rule, were the only force of the difficulty was felt by Cicero, and although he observes that the prayers and sacrifices might also have been foreseen by the gods and included as essential conditions of their decrees, he is not quite decided as to the true solution. The importance ascribed to this problem of fatalism in the ancient world is evinced by the large number of authors who write upon it. These include Plutarch, Alexander of Aphrodisias, and sundry Christian writers down to the Middle Ages.

Fatalism and Christianity.—With the rise of Christianity the question of fatalism necessarily adopted a new form. The pagan view of an external, inevitable force coercing and controlling all action, whether human or natural, found itself in conflict with the conception of a free, personal, infinite God. Consequently several of the early Christian writers were concerned to oppose and refute the theory of fate. But, on the other hand, the doctrine of a personal God possessing an infallible foreknowledge of the future and an omnipotence regulating all events of the universe intensified some phases of the difficulty. A main feature, moreover, of the Christian view was the principle of man's moral freedom and responsibility. Morality is no longer presented to us merely as a desirable good to be sought. It comes to us in an imperatively form as a code of laws proceeding from the Sovereign of the universe and exacting obedience under the most serious sanctions. Sin is the gravest of all evils. Man is bound to obey the moral law; and he will receive its sanctions and reprobation according as he violates or observes that law. But if so, man must have in his power to break or keep the law. Moreover, sin cannot be ascribed to an all-holy God. Consequently, free will is a central fact in the Christian conception of human life; and whatever seems to conflict with this must be somehow reconciled to it. The pagan problem of fatalism thus becomes in Christian theology the problem of Divine predestination and the harmonizing of Divine Providence and providence with human liberty. (See Free Will; Predestination; Providence.)

Mohammedan Fatalism.—The Mohammedan conception of God and His government of the world, the insistence on His unity and the absoluteness of the method of His rule, as well as the Oriental tendency to belittle the individuality of man, were all favourable to the development of a theory of predestination approximating towards fatalism. Consequently, there have been defenders of free will among Mohammedan teachers, yet the orthodox view which has prevailed most widely among the followers of the Prophet has been that all good and evil actions and events take place at the pleasure of the individualities of God, which have been written from all eternity on the prescribed tables. The faith of the believer and all his good actions have all been decreed and approved, whilst the bad actions of the wicked though similarly decreed have not been approved. Some of the Moslem doctors sought to harmonize this fatalistic theory with man's responsibility, but the Oriental temper generally accepted with facility the fatalistic presentation of the creed; and some of their writers have appealed to this long past predestination and privation of free choice as a justification for the denial of personal responsibility. Whilst the belief in predestined lot has tended to make the Moslem nations lethargic and indolent in respect to the ordinary industries of life, it has developed a recklessness in danger which has proved a valuable element in the expansion of Mohammedan empire.

Modern Fatalism.—The reformers of the sixteenth century taught a doctrine of predestination little, if at all, less rigid than the Mohammedan fatalism. (See Calvin; Luther; Free Will.) With the new departure in philosophy and its separation from theology since the time of Descartes, the ancient pagan notion of fatalism was revived under the guise of determinism which was succeeded by or transformed into the theory of Naturalism. The study of physics, the increasing knowledge of the reign of uniform law in the world, as well as the reversion to naturalism initiated by the extreme representatives of the Renaissance, stimulated the growth of rationalism in the seventeenth and eighteenth centuries and resulted in the popularization of deterministic views. Rationalism in its turn added to the mechanical philosophy of Descartes and in the occasionalism of his system, which his followers Malebranche and Guéronex developed, confining all real action to God, obviously tends towards a fatalistic view of the universe.

Modern Pantheistic Fatalism.—Spinoza’s pantheistic necessarianism is, however, perhaps the frankest and most rigid form of fatalism advocating any leading modern philosopher. Starting from the idea of substance, which he so defines that there can be but one, he deduces in geometrical fashion all forms of being in the universe from this notion. This substance must be infinite. It evolves necessarily through an infinite number of attributes into an infinity of modes. There can be no objection to the invariable number of beings of the world, minds and bodies, are merely these modes of the infinite substance. The whole world-process of actions and events is rigidly necessary in every detail; the notions of contingency, of possible beings other than those which exist, are purely illusory. Nothing is possible except what actually is. There is free will in neither God nor man. Human actions are not mere chance occurrences, but necessary from man’s nature as geometrical properties from the concept of a triangle. Spinoza’s critics were quick to point out that in this view man is no longer responsible if he commits a crime nor deserving of praise in recompense for his good deeds, and that God is the author of sin. Spinoza’s only answer was that rewards and punishments still have their effects as motives, that evil is merely limitation and therefore not real, and that whatever is real is good. Vice,
however, he holds, is as objectionable as pain or physical corruption. The same fatalistic consequences to materialism are developed in the various forms of recent pantheistic monism.

*Modern Materialistic Fatalism.*—Modern materialism, starting from the notion of matter as the sole original cause of all things, endeavours to elaborate a purely mechanical theory of the universe, in which its contents and the course of its evolution are all the necessary outcome of the original collocation of the material particles together with their chemical and physical properties and the laws of their action. The more thoroughgoing advocates of the mechanical theory, such as Clifford and Huxley, frankly accept the logical consequences of this doctrine that mind cannot act upon matter, and teach that man is "a conscious automaton", and that thoughts and volitions exercise no real influence on the movements of material objects in the present world. Mental states are merely by-products of material changes, but in no way modify the latter. They are also described as subjective aspects of nervous processes, and as epiphenomena, but however conceived they are necessarily held by the disciples of the materialistic school to be incapable of interfering with the movements of matter or of determining events. Some materialists may go so far as to look upon the chain of events which constitute the physical history of the world. The position is in some ways more extreme than the ancient pagan fatalism. For, while the earlier writers taught that the incidents of man's life and fortune were inexorably regulated by an overwhelming power against which it was useless as well as inconsistent to rebel, the general sense view that our volitions do direct our immediate actions, though our destiny would in any case be realized. But the materialistic scientist is logically committed to the conclusion that while the whole series of our mental states are rigidly bound up with the nervous changes of the organism, which were all inexorably predetermined in the original collocation of the material particles of the universe, these mental states themselves can in no way alter the course of events or affect the movements of a single molecule of matter.

The *Refutation of Fatalism* of all types lies in the absurd and incredible consequences which they all entail. (1) Ancient fatalism implied that events were determined entirely of themselves. I denied free will, or that free will could affect the course of our lives. Logically it destroyed the basis of morality. (2) The fatalism resting on the Divine decrees (a) made man irresponsible for his acts, and (b) made God the author of sin. (3) The fatalism of materialistic science not only annihilates morality but, logically reasoned out, it demands belief in the incredible proposition that the thoughts and feelings of mankind have had no real influence on human history.

Mill distinguished: (a) Pure or Oriental fatalism, which, he says, holds that our actions are not dependent on our desires, but are overruled by a superior power; (b) modified fatalism, which teaches that our actions are determined by our will, and our will by our character and the motives acting on our desires; (c) determinism, which, according to him, maintains that not only our conduct, but our character, is amenable to our will; and that we can improve our character. In both forms of fatalism, he concludes, man is not responsible for his actions. But logically, in the determinist theory, if we reason the matter out, we are driven to precisely the same conclusion. For the volition to improve our character cannot arise unless as the necessary outcome of previous character and present motives. Practically there may be a difference between the conduct of the professed fatalist, who will be inclined to say that as his future is always inflexibly predetermined there is no use in trying to alter it, and the determinist, who may advocate the strengthening of good motives. In strict consistency, however, since determinism is supposed to be of the individual human mind, the consistent view of life and morality should be precisely the same for the determinist and the most extreme fatalist (see Determinism).

Fate

_Fate_ (Lat. _fatum_, from _Fari_, to tell or predict). This word is almost redundant in the vocabulary of a Catholic as such, for its meaning as the prime cause of events is better expressed by the term Divine Providence, while, as a constant force at work in the physical universe, it is nothing more nor less than natural law. Hence St. Augustine says (De Civit. Dei, c. 1): "If anyone calls the influence or the power of God by the name of Fate, let him keep his opinion, and mend his speech." Fate, in its popular meaning, is something opposed to chance, in so far as the latter term implies a cause acting according to no fixed laws. The unseen power that rules the destinies of men was personified by the ancient Greeks under the name of Moira, or, more generally, as three sister Moirai, or Fates, whose names were Clotho, Lachesis, and Atropos. Sometimes they are supposed to have overthrown all gods and men, while at other times the gods, especially Zeus, are described as the rulers of human destiny, or as having the power to change the course of fate. With the Moirai the Romans identified their own Parce or Fata.

The idea of fate as a power in the world came, as St. Thomas tells us (III, 12, q. 5, a. 2), from the attempt to find a cause for events which appeared to follow no definite law and to be the result of mere chance. Many, who were not satisfied with the explanation of poets and mythologists, turned their thoughts to the heavenly bodies, which, acting according to definite and unchanging laws themselves, were supposed to impress their influence upon events in the lower world (see Astrology) (St. Thomas, who was no believer in astrology, evidently supposes that, while Providence acts according to fixed laws in the sidereal system, there is no such uniformity in the case of natural phenomena on earth. These latter are therefore often the result of chance, as far as secondary causes are concerned, though not so in their relation to God's Providence).

**Early Speculations.—** The Greek Philosopher Diodorus of Lassus tried to prove the universality of fate by an argument from the truth of possibilities (πολεμείντως). The contention was that no event can happen unless it was eternally true that it was going to happen. The truth of such a proposition cannot be changed, and therefore the event to which it refers must necessarily take place. It is something like the argument which St. Augustine employs to demonstrate the eternal intellect of God; but the fallacy of it as regards Fate is pointed out by Cicero (De Fato IX 18, 19), who shows that the truth of the proposition depends on the actuality of the event. The definition which Cicero puts into the mouth of his brother Quinctius concerning Fate with the necessity of natural law (De Divinatione I. 53, par. 125). His words are: "Fatum autem id appellò quod Graeci dîvûps, id est, ordinem seriemque causarum, quum causam causa nexa rem ex se gignat", or, as we should say, fate is the result of natural law in the physical world. Cicero himself, however, says further on (ibid., II, 3, par. 6), "What is the use of maintaining the existence of Fate when, without Fate, an explanation of everything may be found in Nature or Fortune?"

The doctrine of fate held an important position in the monistic system of the Stoics. Its universal existence was a logical consequence of their assumptions with regard to the physical universe, for they recognized nothing that was not ultimately reducible to
matter and natural law. In their ethical system, however, the problem of determinism presented greater difficulties; for their favourite commandment, of living according to nature, seemed to imply that "men at some time are masters of their fates", at least as regards the shaping of their souls to that conformity with Nature in which virtue was supposed to consist. The Epicureans stoutly denied the existence of fate, and the unaccountable "swerve" of the atoms, as postulated by the founder of their sect, was intended to preclude the law of necessity, not only in the case of the human will, but even in the elementary movements of primordial matter.

The idea of fate among orthodox Mohammedans is founded on the doctrine of God's absolute decree, and of predestination both for good and for evil. The prophet encouraged his followers to fight without fear, and even with desperation, by assuring them that no timidity or caution could save their lives in battle or avert their inevitable destiny. Disputes about this doctrine have given rise to various schools among the Mohammedans, one explaining away and others denying the absolute nature of the Divine Will. The Koran itself does not convey the impression that Mohammed's own views on the subject were either clear or consistent.

Buddhism.—Though Free Will is not entirely ignored in Buddhism (q. v.), it is, at any rate, practically disregarded. "As to the acts", says St-Hilaire, "during the whole of his life under the weight, not precisely of fatality, but of an incalculable series of former existences" (The Buddha and his Religion, v. 126).

Materialism.—In the theory of those who provide a purely materialistic explanation of the universe, and maintain that the human will is just as much subject to external forces as are all other phenomena, the universal sovereignty of fate is implied in the absolute reign of physical law.

Catholic Teaching.—According to Catholic teaching, God, who is the Author of the universe, has made it subject to fixed and necessary laws, so that, where our knowledge of these laws is complete, we are able to predict physical events with certainty. Moreover, God's absolute decree is irrevocable, but, as He cannot will that which is evil, the abuse of free will is in no case predetermined by Him. The physical accompaniments of the free act of the will, as well as its consequences, are willed by God conditionally upon the positing of the act itself, and all alike are the object of His eternal foreknowledge. The nature of this forensic moment, however, is still open to the opposing schools of Bañez and Molina. Hence, though God knows from all eternity everything that is going to happen, He does not will everything. Sin He does not will in any sense; He only permits it. Certain things He wills absolutely and others conditionally, and His general supervision, whereby these decrees are carried out, is present in His divine Providence. As a free agent, the order of nature is not necessary in the sense that it could not have been otherwise than it is. It is only necessary in so far as it works according to definite uniform laws, and is predetermined by a decree which, though absolute, was nevertheless free.

Moreover, in the case of miracles, God interferes with the ordinary course of nature; and the supposition that the period of the world's evolution is such, for instance, as when man first appeared on the earth, there have been other providential interpositions involving new departures in the world-process, provides for certain facts in the region of organic life an explanation not less scientific than the opposite assumptions of the materialists. St. Thomas distinguishes fate from Providence, and calls it the order of disposition of secondary causes according to which they act in obedience to the First Cause.

It follows from what has been said that, in the Catholic view, the idea of fate—St. Thomas dislikes the word—must lack the note of absolute necessity, since God's decrees are free, while it preserves the character of relative necessity inasmuch as such decrees, when once passed, cannot be gainsaid. Moreover, God knows what is going to happen because it is going to happen, and not vice versa. Hence the futurity of an event is a logical, but not a necessary, consequence of God's foreknowledge. See Free Will, God, Miracles, Providence.

Fathers, Apostolic. See Apostolic Fathers.

Fathers of Mercy, The, a congregation of missionary priests first established at Lyons, France, in 1808, and later at Paris, in 1814, and finally approved by Pope Gregory XVI, 18 February, 1834. The founder, Very Rev. Jean-Baptiste Rauzan, was born at Bordeaux, 5 December, 1757, and died in Paris, 5 September, 1847. After completing his ecclesiastical studies, he taught theology and sacred eloquence, and later was chosen Vicar-General of Bordeaux. Here he inaugurated a missionary movement to save the Faith of the young generation, teaching their young and receiving hundreds of young men. In 1814, at the invitation of Mgr. d'Aviau, Archbishop of Bordeaux, Cardinal Fesch, Archbishop of Lyons, who was especially interested in the project, invited Father Rauzan to Lyons, where, in 1808, he gathered around him a number of zealous and noted preachers. So effective was their preaching in the Dioce of Troyes, that they won the favour of Napoleon I.; and received, in return, the honorary titles of Vicar-General of Bordeaux, and limited, subsidies to defray the expenses of their missions. This favour, however, was short-lived, for, owing to Napoleon's quarrel with Pius VII, the society, which was called the Missionaries of France, was suppressed. In 1814, at the suggestion of Cardinal Fesch, Father Rauzan rallied his co-labourers, adding others, among whom were the young Vicar-General of Chambery, de Forbin-Janson, afterwards Bishop of Nancy, the Abbé Fraysseux, who founded St. Stanislaus' College and instructed the young missionaries in sacred eloquence, Legris Duval, the St. Vincent de Paul of his day, Le Vasseur, Bach, Caillau, Carboy, and others. Starting with renewed zeal, the Missionaries of France not only evangelized the cities of Orleans, Lyons, Toulon, Remiremont, Toulon, Paris, and many other places, but established a foreign mission in Canada, the Missionaries of the Holy Ghost, in New Orleans, and the Association of the Ladies of Providence, which still exist in many parts of France, rendering valuable services to the pastors. Father Rauzan founded the Congregation of the Sisters of St. Clotilde for the education of young ladies. He was befriended by the royal family, who not only assisted him financially, but gave him the celebrated ladies of the Court, and the Abbé of Mount Valerian, at that time the centre of piety, and later one of the principal forts protecting the capital.

In 1830, during the second Revolution the Missionaries of France were dispersed and exiled, and their house in Paris sacked. Father Rauzan went to Rome, where he received a paterndal reception from Gregory XVI, who encouraged and authorized him to found a House of Mercy. The Decrees of the World Council of the Church, which contains the constitution, was given 18 February, 1834, and on the 15th of March of the same year a second Brief, affiliating the new society to the Propaganda, and the former missionaries of France accepted these constitutions on the 5th of December following. Among its members have been many influential and eminent preachers as Mgr. Faillet, Bishop of Orleans, Mgr. Duquesnay, Archbishop of Cambrai, Mgr. Bernadon, Archbishop of Sens, who later became a cardinal. The Fathers of
Fathers of the Christian Doctrine. See Bus (César de; Christian Doctrine; Confraternity of St. Vincent de Paul, Manhattan, and of Our Lady of Lourdes and St. Frances de Chantal, Brooklyn. They also have a house of studies in Rome, houses in Belgium, France, and other places. By a decree of Propaganda (August, 1906), the Very Rev. Theophile Wueher was named Vicar General of the Institute for three years and took up his residence in New York. In their activities the Fathers of Mercy embrace all works of apostolic zeal. One of their chief characteristics is, that they must at all times consider themselves auxiliaries of the secular clergy, and in every way conform to the will of the bishop in whose diocese they may labour. The end and mode of life the congregation imposes upon its members differs little from that of every good secular priest.
